1. wanted: Atari LOGO cartridge

Newsgroup: comp.sys.atari.st
Date: 1995-07-01 00:00:00 UTC
From: shawl@kuhub.cc.ukans.edu
Message-ID: <1995Jul1.120048.96848@kuhub.cc.ukans.edu>
Source record: 162952

I'm trying to find an Atari LOGO cartridge for an old ATARI 800.

Thanks.

S-Shawl@ukans.edu

Does this demo run on a VGA/multisync-monitor?
I'd like to know before getting it.

:Audio, Connect, APEX, and other programs in action (and all those
:programs paid for, which they also wonder),
:and saying:
:"gee, I wish I had a machine like that and programs like that" -

because they are polite? anyway, they still wouldn't actually buy
atari.

:all of them have 100Mhz PC's and plenty of illegal software
:to play with. It's not always Mhz's, 24Bit colour and a dozen
:slots that make a good computer - the overall feeling of the
:machine is sum of many things, some of you can touch and some you
:can't.

true, but this doesn't sell computers...

:Peple buy PC because Peple don't know about anything else and Peple
:want it only because everyone else has a PC. Peple are sheep.

true. Atari never understood this.

:Support: watch the net. Who are more willing to help a fellow in
:trouble than Atari-owners? And the percentage of those with deep
:understanding of hardware and programs is much bigger than in
:PC-world, where Peple call a support person, pay by the minute, and
:listen them reading the manual for you.

most PC users don't have I'net access. The only people still using
their Atari, are those with net access, because that is the
only place where one can find support. t

6. Problem mounting Falcon internal HD :(

Newsgroup: comp.sys.atari.st
Date: 1995-07-01 00:00:00 UTC
From: sxp17@po.CWRU.Edu
Message-ID: <3t49gs$m3o@usenet.INS.CWRU.Edu>
Source record: 162957

Hi- anyone who can show me the light here will be greatly appreciated!

1) I bought a Falcon with no internal HD

Months later,

2) I bought a used Falcon internal Hard Drive (Conner 63MB)

3) I then bought the IDE cable and mounting brackets from Toad.

4) I installed the drive, and it spins up, etc.

BUT > > > >

5) The internal floppy won't read any disks when the Hard Drive is connected.

6) Disconnecting the hard drive and powering back on, the floppy works fine.

7) The hard drive has nothing on it, and it is not set to autoboot, so I need to load AHDI from the floppy to partition it . . .

What is missing? Must I modify the floppy or something?

Thanx!

7. 9wm and 3rd mouse button

Newsgroup: comp.sys.atari.st
Date: 1995-07-01 00:00:00 UTC
From: selick@acs.bu.edu
Message-ID: <3t4ad5$10u@news.bu.edu>
Source record: 162958

With 9wm, how can I, say, move, or resize a window with only a 2 button mouse?
Is anybody else having this trouble? I can't really do anything with 9wm.
It does work though - I can use it ok, just can't move windows or resize
them. I have a 1040ST/e with Mint, Mintnet, X11.

Thanks,
Steve

>resolution and possibly boot from a floppy disk?

Best guess: you can't at all. MagiCMac isn't for games. Games are hacks, usually. Of course there are exceptions such as GNU Chess or Nethack. Rule of the thumb: if it doesn't run on a gfx card, it won't run under MagiCMac.

>Thirdly, I really NEED Neodesk. So far I've had no success with running
>it in place of, or on top of Ease. Can that be done?

It should be possible, it is quite possible with MagiC2/3 to run other desktops than EASE.

>I also have a question on sound. Does it work? I haven't had a chance to
>try it beyond the normal beeps and keyclicks. Do mod players work? Does
>DMA sound stuff like an STe type thing happen?

There is a special version of Crazy Sounds for MagiCMac. The rest should be possible (STe compatible DMA sound) but hasn't been implemented yet, AFAIK.

Hmm.

> Does this seem possible to anyone?... I mean, could you imagine

Not to me.

> anyways... is it REALLY that crazy of an idea?

Its crazy - and it won't work.

True - Wine runs under X and true - X is available for the ST under MiNT.
However AFAIK Wine does not include an Intel emulation which would be
required to run MS Windows code on a non Intel platform. The ST would not
be up to the job of emulating a PC anyway by this means. Just look at
PC-Ditto. No X, no MS Windows - and the resulting emulation is practically
useless. Add in the overhead for X and MS Windows and the result would be
a curio - not a viable system.

A Falcon or a TT wouldn't be up to the job either.

:-(

Roland.

18. PC Anywhere type software

Newsgroup: comp.sys.atari.st
Date: 1995-07-01 00:00:00 UTC
From: bseburn@vaxxine.com
Message-ID: <DB0nHw.5D0@vaxxine.com>
Source record: 162969

I'm currently using PC Anywhere on my PC to connect to my work's network computers.. works great. But I'm wondering if there is such software for use on the ST. I could make use of this as well. I'm not looking to go from my ST to a PC Anywhere host, but rather setting up a ST as a host, and then connecting and using the system as you do with PC Anywhere. Anyone seen anything like this??

Thanks for your time, Brian

Every time I see another thread wandering off into the 'the Atari world died because ST(e) owners didn't all run out and buy Falcons' fantasy, I start to wish that a practical version of virtual reality existed on this newsgroup and I could just gently reach out and 'touch' a few of these mindless twits (sorry, misguided individuals ;-) and help them to see the stars (errr, the light)!

I certainly can't hope in a few quick lines to correct _all_ the garbage that I've seen perpetrated by these folks over the last few months, but I'll take a crack a a few of the favorites...

> The only losers are those people who desperately stick to their
> STs, and (believing some propaganda?) never realize, that FALCON
> is everything they really need.

Excuse me! More than any other platform, Atari users are probably the most informed about every new piece of hardware and software that manages to squirm into the marketplace (there's so little of it, and we're all so hungry for any info on anything new). So, I would say we're very _much_ aware of just what the capabilities of the FALCON are and obviously for whatever the individual reasons may be, it's NOT what we really need.

> And in some respects, it is exactly these ST huggers being too cheap
> to upgrade to a Falcon that caused Atari to stop making computers. The
> price never comes down if no one buys the product!

Price may be a factor for a certain percentage of ST owners, if they are looking to upgrade and you simply can't argue it away. If someone can't afford it, they can't afford it.... end of story! The implication is that those ST(e) owners who have other priorities for their pennies like food, shelter, & education are somehow responsible for the downfall of the Atari market is ludicrous! And please, pick up any Economics text book and read chapter 1: If no one buys the product _because_ of the price, then the price MUST come down, NOT the other way around! (What are they learning in school these days?)

> To every desperate ST-user there, worrying about the dying computer
> platform, I want to say: ST isn't the future of Atari computing.

Well, I've got a shock for you Tommi, neither is the Falcon! But that's beside the point. Most ST users aren't desperately worrying about their machine being a dying breed.... at least I'm not! It does absolutely everything I want of it, it does it well and I'm enjoying using it, 12-16 hours a day at least 5 days a week.

You see, IMHO only, the majority of ST owners, perhaps unlike patrons of other platforms, are not consumed with the idea of _having_ to upgrade to

a faster CPU every time Motorolla pumps one out (this week a '30, then a '40 and soon a '60 and and ...). Why? Very few of us are into those types of applications that demand such performance. My telecommunications program, my word processor, my midi stuff, my DTP all run just fine on my 68000 based STe. True, I've enjoyed the improvement provided by NVDI and yes PageStream could use a little more juice, but for as often as I need it I can live with the few extra minutes waiting. Certainly no justification to buy a faster machine....

> While these ST whiners have been making themselves miserable, I have
> been making music, dtp and programming!

See above..... and judging from the last few months worth of posts in this newsgroup, I would have to say without question, it's been the Falcon owners who are continually doing the whining! If they're not whining about us ST owners, then they're whining about the few remaining software authors who make it a priority to cater to the ST market first. Strange, I wonder why that is.... possibly the fact that there are hundreds of thousands of ST owners out here and perhaps a handful of Falcon owners? I'm not going to try and guess or argue about actual numbers, but I'm sure only a complete fool would question the huge difference in market size between the two.

However..... we then get the continual posts that declare that despite this differential, it is _only_ the Falcon owners that purchase anything new for their machines while us old ST'ers just plod along with our existing sotware. This is completely nonsensical! It is precisely the ST owner who is out there buying NVDI, MagiC, Geneva, NeoDesk, the PAK '30, etc. to bring some new life into his old machine without the expense of having to buy a whole new box. Why in the world would a Faclon owner need any of this stuff, when they've already got all the speed, the newest TOS, a multitasking OS, etc. Now, I only have anecdotal evidence of this from what I perceived at ACE '95, where I saw hundreds of folks forking out hundreds of dollars for software and given the percentages, I've just got to bet that 19 out of every 20 of us were ST owners. Believe me, I did my fair share for the cause ;-). For a more scientific approach, I would challenge any in the biz, like Toad Computers, to simply state what they percieve to be the percentage of Falcon specific software/hardware being purchased. I don't think any of us would be surprised, but heh.... I'd like to hear if I'm wrong.

Now, it wasn't my intention to trash the Faclon, nor _all_ Falcon owners, but I really am sick of hearing this tripe from those _few_ who seem to feel all the world's ills are the fault of us ST(e) owners. Having said that, and realizing that enough other folks have mentioned specific drawbacks, with price being one of the most frequently mentioned, I think I'll just share my pet peeve with this box. I telecommute.... that is I work from home using my STe as a terminal to the net for at least 10 hours a day. I use an ergonomic high-back Obus Forme chair and I sit with my feet up on the desk and the keyboard in my lap. Now if you can tell me how to do this comfortably with a 'stock', 'off the shelf' Falcon, I may

just take another look at one ;-).

>comment?

I thought I replied to this, but I think our newsreader ate it.

In any event, yes, I think I am in a position to even comment.
Now, you should think to yourself, before you make such a comment
yourself, what basis you have to ask this question?

I have been ceritified by Microsoft for Windows NT Server. I've
also been OS/2 LAN Server ceritified, but we don't run OS/2 anymore.
We have 15 WinNT networks installed, at least 5 more in the next
months, and an untold number after that.

Each of these networks contains from 10 to 100 466DX2 minimum PC's,
all running Windows for Workgroups. Our base software is WordPerfect
6.1, cc:Mail 2.3, and Lotus SmartSuite 3.0. We run other types of
software, such as AutoCAD and what not.

My job functions give me the ability to have a PC supplied to
me for my home use. But guess what? I DON'T have one. I've had
at least three PC's, and just got rid of the P60 about three months
ago.

Given that I work pretty deeply with Windows (WinNT, Win 3.1/3.11
and 95), the fact that I can easily get a well-stocked PC for
home use, and the fact that I don't have a PC, but rather use
my Atari at home, what does that tell you?

>
> You've just said people won't buy a Falcon because it's overpriced at

Overpriced for what you can get for it!!!! It it was as good as a PC for
software support and development tools (like Watcom C for instance) then
it MAY sell better...

> 500 quid, then said people will go out and buy a PC, which will cost them a
> lot more than 500 pounds. Your argument about software "professionality" is
> certainly suspect, and not worth considering here.

Also with PC's you only buy a base machine ONCE then you upgrade. I used to
have a 286 way back when and now I have a 486. Same box, same hard drive, same
interface cards, just a new motherboard (about 100ukp) and a new graphics
card (about 30ukp).

Can you upgrade the Falcon to a higher spec machine that cheaply and get the
same performance increase? No. That's another reason why PC's sell better.
The main reason is software quality and quantity of course...

You have 'Lasers and Men' we have 'Doom 2'...

> The reason people never bought Falcons was largely as Doug stated:
> "Atari doesn't advertise-we all know that."
> Bear in mind a large majority of computer purchasers in the 90's are
> computer illiterate. If the shop assistant recommends a model within

> shop assistant remain ignorant of the existance of other machines, how
> can they be expected to choose that model?

That is true, Atari are indeed inept. But again the user friendlyness of
Windows is good (as is Falcon TOS...) and the software is good!

> The price of the Falcon probably was a little too high to start with,

A LITTLE!! 400ukp for a base machine with 1 meg and no harddrive! VERY
expensive. With 1 meg ram you could get a bare 486dx266 for that money...
(ie. floppy but no HD)

> but I don't think it was the price that put the average computer buyer
> off. It may have deterred games-playing ST owners....

It detered the 'home user' which was indeed the old ST games-player. 200ukp
is about as much moeny as most people can justify to spend on a machine
with no track record and little software...

> ....like you from buying a Falcon.

No, I though the Falcon was a waste of time a long time before the Jag.
Just a stop gap 'get some money' machine for Atari...

> Whether the Jaguar is a waste of money or not is irrelevent to this
> argument. All the Falcon really needed was a marketing campaign. All it

Again ATARI ARE INEPT!

> got was a couple of rave reviews in low circulation magazines.

Which?

The point i was trying to make was THEY CANT MAKE MONEY FROM THE PRODUCT!!!
Although I understand what you are saying, but 'distributing someone else's
lifeblood' would entail ripping them off financialy wouldnt it?

If you asked the developers of all the old ST games (like Nebulus, John. M.
Phillips) I dont think they would mind their old efforts go 'PD' and it
would bring back interest to the ST! (Yeah, well...)

I actualy totaly agree on this point. I DO NOT LIKE the PC to be honest. I think It's got one of the worst CPU architechtures in history and is very underpowered for the speed of the CPU.

However it has the software support and upgradeability which other machines (inc. Falcon) dont have...

> trouble than Atari-owners? And the percentage of those with deep
> understanding of hardware and programs is much bigger than in

Yes, that is true. But only because things arent always standard on a PC. If you write a program to use the features of your particular machine then chances are it wont run on any other machine *anywhere*!!

Personaly I know the STE inside out and know all the tricks, with the PC all you can do Is learn the VGA register set and perhaps the Sound Blaster set... That's it :(

You should find that the printer can emulate at least a couple of better known models like the Epson or IBM. Can you find out what emulation mode you are switched to?

IU> None of the software I use, LDW,First
IU> word plus, Printmaster or Stalker, prints correctly with the new
IU> printer.

You need to set the software's printer to whatever emulation mode you have selected.
IU> I assume I need a printer driver for First Word Plus, does
IU> anypne know if there is an FTP site for such drivers.

Yes, but you shouldn't necessarily be looking for an HL630 driver - you need to look for one which suits your emulation mode and these are fairly common and have probably been supplied with FWP in the PRINTERS folder. The FWP "drivers" are very simple beasts - just a big translation table. If you have the manual for the HL630 you could make one yourself.

IU> On LDW the
IU> problem is that I have
IU> to print the second document before I get a copy of the first. There
IU> is also a problem in that the second spreadsheet starts at the end of
IU> the first. Any suggestions would be appreciated.

Yes - you see, what you have now is a "page printer" which begins to output when a page is complete (just as the "line printer" begins to output when the line is complete). The way this is signalled to a a line printer is by L(ine)F(eed) - for a page printer the equivalent is F(orm)F(eed) so your software will need to send this at the end of a document to ensure printing starts.

Top Ten Reasons Not to Upgrade
From an ST(e) to a Falcon

(drum roll please)

10. Spent all my money on Jaguar carts recently

9. Sure, the MegaSte/TT casing is ugly, but at
least its possible to _internally expand_ it

8. Permanent diasability -- sprained my wrist
plugging mouse into that stupid ST underside
mouse connector, saw it was in the same place
on the Jaguar...

7. Permanent disability -- got carpal tunnel
from my sucky 1040's keyboard, saw it
was the same on the Falcon...

6. If I wanted to use a lousy VGA monitor,
I'd have a lousy VGA board and a PC to attach it
to

5. Spent all my money on LD charges getting
shareware because there isn't an ST BBS within
five lightyears

4. System 8.0

3. Strange fetish against spending twice as much
money for less than twice as much (CPU speed,
graphics capability, new software)

2. Confused about AtariWorks Bundleware working
"just like Microsoft's" ... didn't realize this
was a positive selling point......

And the NUMBER ONE Reason not to upgrage from an ST(e)
to a Falcon........

1. Sam Tramiel.

>Peple just buy a PC. You can get far better and more professional
>software on a PC and get better support...

Then, why there are so many people visiting my home, seeing Cubase Audio, Connect, APEX, and other programs in action (and all those programs paid for, which they also wonder),
and saying:
"gee, I wish I had a machine like that and programs like that" -
all of them have 100Mhz PC's and plenty of illegal software to play with. It's not always Mhz's, 24Bit colour and a dozen slots that make a good computer - the overall feeling of the machine is sum of many things, some of you can touch and some you can't.

Peple buy PC because Peple don't know about anything else and Peple want it only because everyone else has a PC. Peple are sheep.

Support: watch the net. Who are more willing to help a fellow in trouble than Atari-owners? And the percentage of those with deep understanding of hardware and programs is much bigger than in PC-world, where Peple call a support person, pay by the minute, and listen them reading the manual for you.

Well, when you get used to the response time of an OS that is
strictly in ROM/main memory and get used to not having GPF's
in the middle of an operating session and you get used to
being able to used ALL of your memory without worrying about
maintaining backwards compatibility with ancient memory models
(windows is still just an ms-dos shell) and you get used to
being able to use all of your physical memory without having
to worry about yet another i86 segmentation hack, namely
the GDI/User resource segments this could sour your subsequent
use of a bloated non-OS that requires a Pentium machine to run
itself with the same responsiveness as an ST running GEM on
a 8Mhz machine.
|a PC and just had an old ST I thought 'Windows? Pah! I have GEM!!' but
|when I used windows for serious development It was great, nothing wrong.
|Equaly on the ST, GEM is fine... I just prefer windows for the extra
|resolution and superior software available.
This is not an OS issue, it's a marketing and architecture one.
|Can I run GEM in 1024x768x256 on an ST? No. A Falcon? Maybe...
Even the original AES was resolution independent. This
is an architecture isssue if at all. CrazyDots 8?

Subject: Towers II weapons question

Hi, I have a little question about those weapons
in Towers II. When you look at the damage they
make, some weapons have a letter after the damage.
Frost sword has the letter 'm', Mace of disruption
has some else letter etc.. What do these letters
mean? I have bought the manuals, but they say
nothing about this.

Also, I found an amulet of mana (from the 4th
floor, I guess), but when I put it on, my mana
doesn't increase. A bug in the code?
Hmm... I can't also get past that one door
on the 4th floor, but perhaps I have to kick
some live undeads before I get there (via
teleport I guess).

Thanks for any info.

I thought we'd cleared this one up Roger. STGUID4E is release 4, STG13E
is v1.3 (aka release 5).

The v1.x system is being used now for english releases AFAIK

Source record: 162908

I am getting sick of the bickering going on between ST(e) and Falcon
users about why you shuold or should not upgrade to a Falcon!

I have been using the Atari range of machines since 1987. I started out
with an STFM (TOS 1.08, single sided floppy) and progressed in 1989 to a Mega4
ST and a Megafile 30 hard drive. My final purchase of an Atari computer was in
1990, I bought a TT (8meg memory and a 100Mb hard drive).

Every time Atari released a new 'superior' machine, I upgraded!

What did I get for my support (nearly 3000 pounds worth for the TT!),
no support from Atari, no support from the industry (software or hardware).

Now if you follow the arguments about supporting Atari and 'upgrading'
to a Falcon, I don't see why I should 'upgrade' to a slower machine with a built
in keyboard (I have sat with a keyboard on my knee since 1989 (not permanently
you understand :-))). Alright it has better graphcs and sound, but why shuold I
have to sit around waiting for the Falcon to finish the task I had become
acustomed to the TT finishing in half (or less) of the time.

Inspite of all this, I still considered the upgrade, but only to the
32MHz 040 Falcon in a PC (sorry for swearing) like case promised by Atari. Now
that machine I would have upgraded to!

I sympathise with Falcon users who feel that Atari have pulled the rug
from under them and left them stranded with a brand new machine without any
'official' support, but thats how I have operated since about 1991.

Despite all this, I have done and will continue to stick by the Atari
platform for a long time. I have never considered a move to the PC world, I,
unlike the machines do not feel the need to be a clone (mindless in many cases)

I apologise if the above rant seems a little off subject, but this is
not the first time Atari have brought a new machine and then pulled the plug!

Source record: 162909

Hi All!

I read somewhere that the only thing needed to run a Iomega Zipdrive on a Atari Falcon, is to have the ICDpro 6.5.5 driver. Is this true?
As I have a PC486dx2-80 and ordered a ZipDrive I would like to run it on my Falcon aswell. Somebody told me that some companies are making a Atari driver for the ZipDrive, was it HiSoft? And rumours saying that they are not going to sell the routine separate. Well, to tell you the truth. I'm not going to invest in a second ZipDrive just to get the driver!!!

/Lars

43. Comments On Cubase Audio/Falcon?

[Author was selah]
[Posted on 2 Jul 1995 14:54:03 -0700]

can you please give me your comments, pros and cons ,
about cubase audio and the atari falcon?
you see i have the falcon and for 300.00 can gwet cubase audio.
i have four megs ram and 86 h/d.
i was told to buy AV quality hard drive (gig or more)
AV meaning that the platter (disks) will be of composite type material so
as
not to expand thermally like metal disks do.
the reason being that when reading or writing to the disk, calibration of
sectors needs to be flawless as much info is being transfered while doing
audio or digital recording.

DO ANY OF YOU HAVE A FALCON USING CUBE AUDIO? are you pleased?
i would appreciate hearing from europe as i know you guys are big on atari.
thank you.

The "Save your computer" junk mailing from Britestar seems to have cropped up an an awful lot of news groups.

They haven't got a correct format reply so its not possible to email a snotty message to them. However the base message number is from mach3.directnet.com so is it safe to assume that this is their provider.

I was heartily pissed off to keep getting that message and frankly I feel like demanding a refund for download time and storage (about 0.50UKP) and a hefty adminstration fee (25UKP). If the future of the net lies in the hands of arseholes like Britestar then I want nothing of it.

I think 2 computers might ease the boredom of incredibly long audio
processing waits. I just jump back to the Atari to sequence while the
audio processes.
>Here we go again... Two computers, two monitors and very little place left, as
>well as a hell of a time switching position between the computers -not very
>ergonomic, I'm sure.

One cool thing about the Quad /Logic setup is that Logic starts
automatically when you press play or recordin Quad. On other windows
sequncers you have to put the sequencer in "pause" mode then switch to
Quad, the click start. Cakewalk is notorious for that. 2 computers
has advantages and disadvantages of course, and space is a big one.
Time saved is a big benefit. Especially if you do alot of
telecommunicating.

Cubase does play 8
>audio tracks with no problems at all at full DAT qualtiy.
>Cubase Audio doesn't bomb at all (anyway, mine hasn't in about 3 months, since
>I got the 2.03 version -and I work with it almost every day).

Sounds good. I was realy tempted to go Falcon, and still might if
prices ever drop to reflect Atari's abdication from the computer
market. It looks like there will be a LAF 2.5, at least in Europe.
For now though for me, Logic 2.01 Atari is as stable as a rock on my
adspeeded ST. Adding the PC, Quad&Tahiti probably cost about the same
as a Falcon and Cubase audio, so I guess the issue really boils down
to if one wants 2 computers on their desk.

>

Maybe these sheep wanted more bang for the buck that the ST did not have. Why should users settle for less when ST hardware/software does not measure up to Mac/PC ones?

Don't blame the public for not knowing what the ST was. It's Atari's fault, GET OVER IT!

> Support: watch the net. Who are more willing to help a fellow in
> trouble than Atari-owners? And the percentage of those with deep

Oh, gee. Many Atari users/owners have to seek support from the net since Atari has washed their hands of their computer line. Mac/Wintel users have access to net support as well...What is your point?

Sounds like you are in tears because the public didn't give a dam about the ST platform and bought something better.

MagiCMac is an Mac appliation. Once it is running you can switch back and forth between it and System 7.x. I don't think you can boot up into MagiCMac and bypass the MacOS because of the above.
As a long time ST user (Still us my TT all the time) I would recommend MagiCMac. Its great on my Powerbook, a portable ST with 16 gray's (or color if you have the right Powerbook). But remember that you can't run most games. Basicaly anything that will run on a ST/TT video card will work with MagiCMac. I have tested NeoDesk, HiSoft Basic, Atari Works plus many programs off the Suzzy B/Toad CD-ROM. I am supprised at how much does work.
I am currently running version 1.05 of MagiCMac. There is a later version with a demo available. I believe it is 1.21. Get the demo and try it. I think you'll like it.

Mike

52. Falcon's audio performance

Newsgroup: comp.sys.atari.st
Date: 1995-07-02 00:00:00 UTC
From: gs01tph@panther.Gsu.EDU
Message-ID: <3t5m9v$j01@sphinx.Gsu.EDU>
Source record: 162919

If anyone there has a chance to use professional audio measurement equipment, it'd be interesting to measure Falcon's (and possibly other computers' too!) audio performance:

- Frequency response (Falcon: 40..18000 hz +/- 0.5 dB after b.boost rem.)

- Harmonic distortion in diff. input/output levels: 100, 1000 hz

- S/N ratio when 100% input/output levels used

- IM and other distortion types

etc...

AND especially interesting..!!! I think, Falcon could be turned into a reasonably accurate audio measurement equipment? Accurate spectrum analyzer, real-time dynamics measurement, freq. resp, distortions, ... Or (for hifi-freaks!) what about loudspeaker's room frequency response analysis in real-time?

Would 56001 be useful for such purposes - opinions/facts..?

I'd be in 7th Heaven if I found a good shareware program that'd make it possible for me to make above mentioned audio measurements at home =-) !!! And such system might even create interest among hifi-dealers, if done well... Remember: now we don't talk about laboratory-quality measurements, but "only" relatively good accuracy. Something that would help people to place their loudspeakers, tune-up their cassette decks, measure their LP/CD records' dynamics (just for fun..), and so on.

Am I the only one who finds these possibilities thrilling..?

Tommi

53. .FNT files with SpeedoGDOS?

>BTW, Ducky, your prices are too high, IMHO. Quack, quack.

>-Hutch- @ Fair Dinkum Tech

Hutch,

First, I did not have to sign a non-disclosure agreement before I got
the DevKit. Therefore I am not bound by any sort of contract.

Second, regarding prices...anyone interested should contact me and make
an offer...the out-of-pront books would be hard to put a price on for
those who have been looking. I think the prices for many things are too
high, including sub-standard Atari software which, unfortunately, has
been the only thing released for this system during the past few years.

Is there a possibility that Chimera/Mint/PPP etc. just doesn't
have enough RAM on a TOS 2.06 machine? I imagine that that
desktop takes a considerable amount of RAM in comparison to
other, older, versions.

: editor for the Falcon. Thats why i mentioned your name and your program.

Indeed. Though Fansi was and is intended mostly for use on m/ST/e
machines because of the way I display 80 columns in low resolution to get
16 colours. I imagine it doesn't look very nice on a Falcon. If I had a
Falcon to test on I'd include a full 16 colour, 640x480 mode. But that's
for much later -- when I can afford one. :-)

Sounds like you don't have a keymap file. The default key mapping is
German, but X provides a pretty straightforward method of customizing
it. Get the file Mint/X11/Clients/ukXkbd.tgz from a.a or a mirror; it
has the program xmodmap and a keymap file for UK keyboards. I can also
e-mail you a modified keymap file for US keyboards if you need it.

: >based on UUCP for the Atari. You will only need an external text editor

: So I take it one needs a UUCP connection?
: What about a SLIP/PPP newsreader?

UUCP is not SLIP/PPP.

UUCP is Unix-to-Unix-Copy-Protocal, and is used for primarily transfering Email and News between computers. UUCP is now almost only used between a Personal Computer (i.e. an Atari) and a large UNIX system. In some cases UUCP is used between two Personal Computers. Most large UNIX systems need TCP/IP (Transfer Control Protocal/Internet Protocal).

WWW (World Wide Web) is an interactive multimedia system which makes wide use of hypertext. It requires real time (while the user is also using the computer) transfer over the serial port using SLIP (Serial Line Internet Protocal) or PPP (Point-to-Point Protocal) in the case of a personal computer for communication with a UNIX type system typically.

As UUCP does not stay online after transfering data, and WWW browsers require this, UUCP does not at all provide connectivity for a WWW broswer.

Works will not import RTF files with cr/lf line terminators. WordPerfect
generates RTF with cr/lf line terminators. You can import WordPerfect RTF
if you strip out the cr/lf. I use a tcsh shell script which runs a simple
PERL program to reformat files from WordPerfect.

66. FS or Trade: two 9-pin printers

Newsgroup: comp.sys.atari.st
Date: 1995-07-02 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <RE4cPox.lmcclure@delphi.com>
Source record: 162993

Here is what I am offering for trade or sale :

```
Printer Model Approx. Cash Value
--------------- --------------------
Panasonic 1091i $70
Star NX-1000 Rainbow (color) $75
```

Both printers are in very good condition, and include original manuals
and boxes (although the Star's box is missing the styrofoam packing blocks).

ITEMS WANTED IN TRADE:

* Single speed SCSI CD-ROM drive (for use with Atari ST)
* NVDI 3.0 or higher
* Geneva + Neodesk 4 (or either by itself + <$35)
* B&W hand scanner for ST (i.e., Migraph or Toad)
* 3.5" 1" high SCSI drive of equivalent value
* External 14.4Kbps data/fax modem
* Set of four 1meg SIMMs, 120ns or faster
* Set of two 2- or 3-chip 1meg SIMMs, 70ns or faster + <$15 cash
* Tabby graphics tablet
* Sound digitizer + cash (unless digitizer of equivalent value)

If you have something not listed that you think I might be interested
in, make the offer...the worst I can say is "No thanks".

If you have an item you want to trade but think it is worth more than
the printer you want to trade it for (i.e., a Quantum LPS240S) let me
know how much extra you would want from me.

If anyone out there is interesting in trading for both printers together,
I'm also interested in more expensive items (i.e., a double-speed CD-ROM
drive).

BONUS: If you live in the Little Rock area, and want to trade in person,
I'll throw in a box of fanfold paper I never got around to using.

Message-ID: <RG++3iy.lmcclure@delphi.com>
Source record: 162994

In a message dated 5-30-95, you said:

"In what way do they differ? As I understand both machines
use the same WD1772 floppy controller and there's nothing
about the way disk drives work to distinguish between them -
at least I thought they were all the same."

Trust me. No Amiga uses a WD1772 for floppy control. I've had two of my A500's open this weekend to work on them, and they certainly had none.

From what I understand, the Paula chip is primarily responsible for floppy drive operations, although other chips are involved, as well.

About the only WD chip I can think of you might ever find on an Amiga motherboard would be the SCSI controller chip on an A3000.

Source record: 162995

In a message dated 6-25-95, Steve Wells said:

"What type of SIMMs can I use on my STe, and if necessary,
how do I need to modify them? I know I need 1meg, 30 pin
SIMMs. But can I use Mac/PC SIMMs straight out of the box,
or if not, do I have to do something to the 9th bit (??).

Some folks (i.e. Roger Sheppard), will advise doing something with the 9th bit on PC SIMMs, but I've never had a problem with mine.

Almost any speed you can obtain will work. I am using two 8-chip 80ns and two 3-chip 70ns SIMMs in my STe.

Anything 120ns or faster will work, and 150ns likely would, but you are not likely to find any that slow.

For those buying new, I would advise going with 2-chip SIMMs, as they save power, and therefore generate less heat.

About the only reason to go with 3-chip or 9-chip SIMMs is if you think you might put them in a PC later (and with more modern PCs using 32-bit 72-pin SIMMs, why worry about that?).

69. Falcon - external HDs

71. HP540 drivers

Newsgroup: comp.sys.atari.st
Date: 1995-07-02 00:00:00 UTC
From: mogier@itl.net
Message-ID: <3t6oda$fej@auntie.bbcnc.org.uk>
Source record: 162998

A friend with an ST has recently purchased a HP540 printer.
This works fine with most of his existing software, apart from the
word processor, which goes by the name of Wordup and was produced by a
company called Neoscept, which apparently has gone out of business.

It seems that his best option is to ditch the software and buy
something more modern, but I wondered if anyone knew of a printer
driver that exists that will enable the HP540 to cope with Wordup? And
where I could find it for him (he being Net-less).

Many thanks,

/X\ark

72. MagicMac question

Newsgroup: comp.sys.atari.st
Date: 1995-07-02 00:00:00 UTC
From: yc1663@CNSVAX.ALBANY.EDU
Message-ID: <3t6llq$b73@rebecca.albany.edu>
Source record: 162999

I have a question about MagicMac: Does it totally replace the Mac OS, or does it run on top of System 7? Could I just turn on the computer and have it boot up MagicMac? Or will I have to endure System 7 loading and then click on MagicMac?

Do current MagicMac users recommend this product (would you buy it again)?

I'm looking to upgrade my old 520STFM or just get another machine...and it seems cheaper to get an IBM or MAC with CD-Rom, speackers, (fully loaded) ST emulator, than to piece together an Atari system. Not only that, but everything will be in a nice *CASE* without wires running all over the place.

Last question: For those who have tried Gemulator and MagicMac, which do you think is better?

Thank you,

Daniel

> yourself, what basis you have to ask this question?

I dont think I have any bias. I have used the ST for many years and
have always thought it a great machine. But in comparison to windows
I just feel that windows is better. This is my oppinion!

> Given that I work pretty deeply with Windows (WinNT, Win 3.1/3.11
> and 95), the fact that I can easily get a well-stocked PC for
> home use, and the fact that I don't have a PC, but rather use
> my Atari at home, what does that tell you?

The uses you have for home use are met by the Atari and you dont
feel the need to learn new software to do an equal job.

I realy cant belice how biased and blinkered ST owners are! Before I had a PC and just had an old ST I thought 'Windows? Pah! I have GEM!!' but when I used windows for serious development It was great, nothing wrong. Equaly on the ST, GEM is fine... I just prefer windows for the extra resolution and superior software available.
Can I run GEM in 1024x768x256 on an ST? No. A Falcon? Maybe...

It's called a SCSI-II cable, the other end is small (50-pin) D-connector,
the other like old SCSI cable, big 50-pin D-connector. Any good computer
dealer/shop should have them - there are vast price differences though,
so shop around. 2 meters is the longest available lenght.

Ha! Well at least we agree on that latter bit. :)

But I still think your credibility suffers because you stated that "Windows
is a joy to use." Yeh, OK... beauty (and pain) is highly subjective.

And in regards to the following comment:

> If you asked the developers of all the old ST games (like Nebulus, John. M.
> Phillips) I dont think they would mind their old efforts go 'PD' and it
> would bring back interest to the ST! (Yeah, well...)

That's fine and dandy if you want to get the written permission from EACH
copyright holder before you post commercial software. Just don't make the
idiotic assumption that because the ST is an 'orphaned computer' that all
commercial software should be freely available for the asking. Some devs
are still making a little (emphasis on 'little') on Atari software, y'know?

Yep, it works fine. You'll need 14Mb RAM, if you want to do everything
with it (it runs also more bug-free with lots of memory. It also needs
a SCSI(-II) drive. You might also need have to do some fixes for your
Falcon (blame Atari!) - "clock-buffer modification", removing the bass
booster, and changing the input level are the most needed.

>i was told to buy AV quality hard drive (gig or more)

>as not to expand thermally like metal disks do.
>the reason being that when reading or writing to the disk, calibration of
>sectors needs to be flawless as much info is being transfered while doing
>audio or digital recording.

Yes, the thermal calibration is the worst enemy of a D2D system.
I have an IBM DPES-31080 SCSI-II drive, and it does not calibrate at all.
New Micropolis drives are also very good (also expensive).

>DO ANY OF YOU HAVE A FALCON USING CUBE AUDIO? are you pleased?

Yes, I am pleased. :-)

Hi!
I am looking for C-Lab Notator programs v.2 - 3.1 w/ docs AND dongle.
If you have up-graded to Logic or switched to another program, please
consider selling your old copy to my high school electronic music lab.
Thanks in advance!
Slayman

Don't get sucked in by the closeout prices on the Newton 100's.
They're VERY battery hungry and the handwriting recognition is not up to
par. The current Newton 120's are substantially better. Buying one of
the old ones is like getting a 520ST with TOS 1.0!!!

83. Hisoft BASIC v GFA Basic?

Newsgroup: comp.sys.atari.st
Date: 1995-07-03 00:00:00 UTC
From: rob@rgcasey.demon.co.uk
Message-ID: <804810304snz@rgcasey.demon.co.uk>
Source record: 162860

I am about to start a programming project that will be a fairly lengthy piece of software. I would like to use GEM dialogs and menus and I am in a bit of a muddle! I own HiSoft Basic 2.1 & GFA Basic 3.6 and have limited knowledge of HiSoft (to be fair I have only used the simpler commands in GFA) but before I start delving into the intricacies of GEM programming, is there anyone that could give a idea as to the easier of the two languages to use. To be honest GFA puts me off because of the lack of support for it and the limited description of using GEM with it. HiSoft looks friendlier and its still supported (I think!). Also I cant get the GFA Editor to work in anything but ST High (I'm using a 4MB Falcon). Is it possible to use the new AES 3D dialogs with GFA?

Im sorry if this sounds daft, but any comments would be appreciated before I dive in.

(PS does anyone know anything about a rumour concerning GFA Basic in that the upgrade to complete Falcon compatibilty had been virtually complete when the developer decided to put it on hold? I think I remember someone saying there was about 300 hours programming to finish it off and they were asking for volunteers.)

84. PC CD-ROM Emulator?

Newsgroup: comp.sys.atari.st
Date: 1995-07-03 00:00:00 UTC
From: rob@rgcasey.demon.co.uk
Message-ID: <804810574snz@rgcasey.demon.co.uk>
Source record: 162861

Can anyone shed any light of a piece of software I have heard about called
SARA (I think). I understand that this is in beta testing and
I believe that it is supposed to be a CD-ROM driver that will
allow a Falcon to use certain PC CD-ROMS (by having individual modules
written for each one). The ROMS I keep hearing mentioned are Groliers
Encyclopedia and MicroSoft Encarta.

Anybody know anything?

In a previous article, "D:DEMONKA9QSPOOLMAIL" <jim@jimbee.demon.co.uk> wrote:

> I realy cant belice how biased and blinkered ST owners are!

Good grief, Jim! Take a look at your newsreader and notice what newsgroup you are in. It should say something like "comp.sys.atari.st." That's a fairly good indication (to most conscious users) that Atari users (fanatic and otherwise) are likely to hang out here. What kind of bloody response do you expect when you go extolling the virtues of Windoze?!!! Sheesh.

You think Windoze is great. Fine. Good for you. But nobody here cares!

If you want to lambast the Atari in comparison to any other OS then kindly take that kind of drivel to the .advocacy newsgroups where it belongs.

Personally, I think MacOS is a much better choice over Windoze -or- TOS/GEM, but I'm not about to waste everyone's time debating that in comp.sys.atari.st.

Let's keep the ATARI in comp.sys.atari.st!

No, it was Amiga that was doomed by piracy.

>Maybe these sheep wanted more bang for the buck that the ST did not have. Why
>should users settle for less when ST hardware/software does not measure up to
>Mac/PC ones?

You talk about ST. It's history. Falcon, TT, Eagle and Medusa are not. Software
run in those machines feel and look as modern as any PC-software, colour,
3D-graphics, drag&drop, speed. Come and see.

>has washed their hands of their computer line. Mac/Wintel users have access to
>net support as well...What is your point?

If anyone likes to blame TOS-machines for not having support, ...shame
on you! :-)

>Sounds like you are in tears because the public didn't give a dam about the ST
>platform and bought something better.

I don't give a damn what other people use. It just seems sad that the machine
they get is not able to do what they actually wanted to do with it (and this
is what I've witnessed among my friend-musicians and other creative people).
That's marketing power.

>the programs I have for it...but new ones are just not out there when you
>are trying to match em up.

It depends what you do. For music and some graphical applications Atari
is far for dying platform. If you're talking about those fancy CD-ROM
applications: you won't get those with SGI either.

I wonder why some people here are so eager to make Atari-users admit that
Atari-computers are not what modern people want.

OK, I'll say:

Atari-computer is NOT what modern, educated, civilized and forward-looking
people want. It's not advertised, repair services are hard to find,
programs are hard to find, fellow-users are hard to find, information is
hard to find, Magazines hardly ever mention it, my neighbour hasn't heard
of it, my Gerbils don't care about it.

OK?

Feel better? Problems solved? PC feels now better?

Now you can unsubscribe and leave us loosers here talking about
products that no-one cares about.

I use the mouse accelerator CPX from the TT Languagte disk, it includes
a simple screen saver that just balanks the screen.

It workswell with NVDI, MagiC and many other programs, the only program
that has ever caused any problems is Deluxe Paint.

I write this on behalf of a friend: he has a SLM804 which he uses with Calamus SL. When printing from the A4 paper tray the output is fine, but when he prints from the manual sheet feeder, an A4 page is cut off to US letter size. This is quite an annoying problem, does it have anything to do with the DIP switches inside the printer, or is there another explanation?

Martin.

Nice cut there, cloneboy. You conveniently cut off my mention of
the ONE 64K segment that gets allocated for GDI resources in
Windoze. Try reading about it...

Protected mode wont do squat to get around it. It's a part of the
design of windows (unless you run NT).

Hi There,

I've got STXF255.ZIP off umich, and it's got the /|\ 8 bit emulator in it, not a problem. My original disk of this did have a program on it called QTU (quicj transfer utility) for xfering an 8bit disk to a ST .SD or .DD file (or was it .XFD?). I really need this.

Another thing ... a *.DD file ... an image of a double density disk! I can't seem to create one of these either. And, if anyone has one handy, a virtual Hard Disk ... i'd love to play with one of these.

Thanks heaps in advance!

I have owned many Atari's. First I had an old 600XL, it died. I then bought an 800XL and had lots of use out of it. I even sped up my 1050 with a USDoubler and such. I then bought a 520ST (without drive) for a "steal" $200 back in 1985 and slowly upgraded it to a whopping 1 megabyte, it died. I soon bought a 1040ST and had it for years. I had it up to 2.5 megs up until seven months ago. I had numerous gadgets connected to it, it died. So, I started again with a 520ST and gave it 2.5 megs. It still lives, but collects dust as I am now using my Falcon.

I happen to think the ST's are extremely wonderful machines and I thoroughly enjoyed them. I have no problems helping my friend with his trusty mega 4. However, I am extremely impressed with my Falcon. Yes, it is quite fast, and quite fun to use. I enjoy programming it. Besides, it's an excellent test of program compatibility. If software I write happens to work both on a ST and Falcon, then I know I have accoplished something. I no longer need that excellent Photochrome program for viewing various pics. I have others that use the DSP chip. Jpegs snap right on my screen in the fraction of the time of a ST. Viewing Mpegs at full speed is quite a nifty thing. To me, the Falcon is better, but doesn't replace the ST.

The ST, despite its 8MHz speed still does things much faster than even 486 and even PowerMac systems. It's not necessarily the hardware design (it's 8MHz for Pete's sake!), but the Operating system and program design. The ST by its very limited nature (4 megs) inspires programmers to be more efficient with their programming and thus release superior software. Macs and PCs achieve performance by brute force (increased CPU speed). Try moving fonts on a PowerMac and you can watch a couple videos before its done! I know, I also have a PowerMac.

The Falcon has quite a few improvements over the ST. However, it is too slow, based on its features, to handle the new features. Ever tried doing anything in a high color mode? Snore city, even with NVDI! The falcon could have been a contender IF it had a reasonbly faster bus speed and CPU speed. The Falcon's extremely annoying bottleneck, the bus, is only capable of being increased to 20MHz by external means. That's too darned slow. The flaw of the Falcon and even TT was to not make the display and sound hardware UPGRADABLE. The example of the PC is the reason why the Falcon and Atari were given the marketing finger. Heck, the memory had to be expanded by proprietary means!

I happen to like the idea of going out and plugging in a universal SIMM, or video card. I'm not saying a PC style one (what a nightmare!). Slots are a blessing and make a market for third party network of products. A computer with room to expand is always a pleasing sight to a computer buyer.

I like the ST. I like my Falcon. However, they both could have been much better. All failures are a direct reflection of who is in charge of the marketing, not who is or is not buying. The magic period of time where Atari could have had a good (marketable) computer and a popular one was around 1987-1990. They blew it big time.

The only way for Atari to release a home computer again is if it can run on a popular CPU (Motorola or AMD -- not the "I" word) and have a minimum speed of 90MHz. The 680xx series is old and outdated. The world of RISC and parallel processors is already here. The PowerPC architechure is my prefered choice and allows for multiple OS technologies. However, Atari will never learn.

Personally, the "Atari" name is a poor choice to begin to sell computers. They need a new devision with a new name. The Atari name will never be taken seriously.

No, even the lastest version (6.5.5) of the standard ICD booter
will NOT support the Zip drive. ICD had released a drive on GEnie that
they thought was complete. Unfortunately, it is apparently bugged and
they are still working on getting a fully-functional error-free driver.
This information is current as of 6/23 when I spoke with ICD on the phone.

Hello

I'll try to help you with the things you asked about.

> CAN ANYONE TELL ME IF THE FALCON DIGITAL INTERFACE WILL
> WORK OUTSIDE OF CUBASE AUDIO?

Well, it works with all software that supports it. I guess you can use it with E-magic Logic Audio also (even though I definitely DON'T recommend Logic Audio, because of lots of problems). It works fine with SondPools' other HD recording software (AudioTracker, AudioMaster).

> YOU SEE.. I HAVE THE F.D.I. BUT HAVEN'T GOT CUBASE AUDIO YET.
> ALSO...

Buy it as soon as possible!!!

> MY FRIED TELLS ME THERE ARE SOME MODIFICATIONS TO BE DONE ON THE
> FALCON FOR
> 1. DSP/CPU CLOCK RESOLVING (SYNCING)

A small misunderstanding that is widely spread. The thing that has to be modified is the CPU clock and nothing else, because it doesn't have clean enough edges in the waveform. The only software that seem to get problems because of this is Cubase Audio - because it gives the computer so much work to do and pushes it to the limit.

> 2. BASS BOOST CUT ON THE AUDIO OUTPUT

We're talking about exchanging surface mounted resistors and condensers, if you want to do this.

> 3. I FORGOT THE OTHER

Probably the line modification. Also this requires soldering of surface mounted components that are extremely small...

> HOW IMPORTANT ARE THESE?

Well, if you don't plan on buying more hardware they are extremely important. If you want to use a DAT when recording (through the FDI) and an FA-8 when listening, they are of no meaning.
The DAT has better AD converters than the Falcon and you'll get a better sound quality. The FA-8 gives you 8 separate audio outputs with full band width, so you can mix it freely with an external mixer. This is the setup that I use in my own recording studio.

> DOES ANYONE KNOW A RESOURCE GUIDE TO DOING THESE MODS ... AS I'M AN
> ELECTRONICS HOBBIST.

Do you really want to do the modifications yourself? - they require a quite experienced technician as it's necessary to solder very small components on the PCB with very little space left around them. If you're not 100% certain that you can manage - let someone else do it!
I have put together a complete guide over how to make Cubase Audio work as good as possible. I'll be happy to send it to you (on most nets, it has to be uuencoded - so that is probably the most practical way to send it), just request it by sending an e-mail to me.

Have a nice day,

Claes

Hello Sanjay,

I'll try to help...

> 5) The internal floppy won't read any disks when the Hard Drive is
> connected.

Are you sure that the cable is installed correctly?
If you don't get a starting picture (the Atari logo and memory check) the cable
is turned 180 degrees wrong.

> 7) The hard drive has nothing on it, and it is not set to autoboot, so
> I need to load AHDI from the floppy to partition it . . .

I've experienced some problems with the Falcon Wing memory card (the model that
has two SIMM holders running between the floppy and the HD).
It made the floppy go berzerk. I'm not sure of the solution, but someone told
me that it was sensitive of which SIMM's that were used; 9-chip or 3-chip.
Another faint memory tells me that it could be a grounding problem and that it
could be helped by soldering a cable from the memory card's ground lead to the
Falcon PCB's ground lead, to get the ground work as it should (something about
too thin leads in the memory board or something like that).
If you don't have a Wing card, the problem could be something that's disturbing
the data. Try to mave the hard disk to another position or simply turn it
around, so that the cable faces the back side of the computer, instead of the
front. It could help if you're lucky.

> What is missing? Must I modify the floppy or something?

I don't think that the floppy is the problem at all.
Maybe you should check that the power supply holds the right voltage.

Good luck and best regards,

Claes

> poor.
> The input signal is TOOOOO hot. To record normal level, I have to feed
> my Falcon with CD discman earphone level 4 (total 10), you see. Or half
> the volume slider of my Roland U-20.

Well, it could be that they've followed the Cubase Audio manual blindly.
Oh, by the way - you say "earphone level". After the modifications, there
should be close to line levels and a speaker level is far too high (the
earphone output is naturally designed to feed speakers, even though they're
small...).
In the Cubase manual it says: To reduce the input gain by 6 dB...
My very good friend, Sven Bornemark, asked a technician (Lennart Forth) about
this and after consulting the schematics he reached a much more interesting
level. The way it should be made instead is to reduce the gain to the standard
level of -10 dB. To do this, just change the value of the resistors R66 and R87
to 1.8 kohm and you'll have a level of around -10 dB instead (all other
modifications in the Cubase manual must be done as well, but this should be
changed in the description in the manual). However, you should also check the
levels in the program. There are input levels in the Hardware setup and
monitoring levels in the mixermaps and the monitormixer.

> Also, the stereo recording is not balance. Well, I can't tell if the
> audio mod has been done, I can't tell if the bass boost has been
> removed, I can't even tell if the output of Falcon is normal, as I
> can't even record a high quality file.

Strange - there should be no problem. Of course, the quality is not as good as
when you use a DAT to get the AD conversion, but it should work.

> I have to get either one of the following:
>
> 1. FDI + DAT.
>
> Which FDI to get? Steinberg/Soundpool/Compo/any-3rd-party??How much?
> What is the cheapest usable DAT? Can do a/d, d/a for FDI. can do back
> up for Falcon. Are there any such DAT(portable??) that is below
> USD400/500?

Good thinking - now you'll be able to make high quality recordings.
To make backups to DAT, you'll have to get a DAT with Coax or Optical in+out - so that you can use the FDI. With the Steinberg FDI comes a program that backs up audio files only, but the SoudPool SPDIF can be bought with a program that backs up all files. Since SoundPool manufacture their own SPDIF interface and Steinberg's FDI (it is, in fact, exactly the same thing), I think that SoundPool is the best to get. The price is probably better than the Steinberg FDI.

> 2. Jam 4.
> I read from usenet that this product comes from Sweden. Any news?
> Is the quality good?

Jam 4 uses the built-in input/output and adds two more outputs from the DSP-port, so theoretically it's no better than the computer (it uses the computer's AD/DA converters, which are not of the highest quality). However, I haven't tested it myself, so I don't want to judge it too hard -there could be something in the box that improves the quality of the sound...

> 3. FA-8
> Just too expensive.

Here in Sweden, the JAM 4 sells at SKR 2295:- and the FA-8 at SKR 4400:-. I think it's worth the extra money to get the FA-8 since it gives you 8 seperate audio outputs. The FA-8 is from SoundPool instead of Steinberg and that makes it cheaper, even though it's exactly the same thing (SoundPool manumacture these for Steinberg as well).

Best regards,

Claes

I have midi on the Atari (STe), but also run Protext on it too. I've been able
to move files between the two machines on DD disks (720k)as long as they were
formatted on the Atari, not the pc. I'm sure that's the opposite of what I've read
in past Atari mags, but it works for me. Very useful for Atari-created midi-files
coming out the Soundblaster instead of the Synth.....(NOT). But you could download
via the pc and transfer via floppies. FWIW I can also print docs done in Protext
via the pc to Deskjet.

Since I own both an Atari and one of those 100mhZ PC's you refer to I must state that the Atari is no match, either in speed, software, etc... but I still like my Atari. This brick throwing stuff is for the birds...any computer is good if it does what you want it to do...brand name doesn't have anything to do with it. Come on dude, fess up...Atari is a dying system and we have to admit it. That doesn't keep me from enjoying my Atari and the programs I have for it...but new ones are just not out there when you are trying to match em up.

Will you please update the docs, too? Version 044 still has the documentation
for version 0.31. It's kind of hard to use new features if there is no clue
what they are.

The new options dialog is _very_ nice, BTW.

115. Hiding files on Falcon question?

Newsgroup: comp.sys.atari.st
Date: 1995-07-03 00:00:00 UTC
From: msh@mserv1.dl.ac.uk
Message-ID: <3t8t88$4f6@mserv1.dl.ac.uk>
Source record: 162937

Further to my problems of using a searcher to change attributes of found files I seem to have found a bug I assume is the fault of the Falcon. I've tried hiding files using Seacher Deluxe and Knife ST on my Falcon TOS 4.04 on the 127 Mb hard disk and although all programs I test it with say they are hidden the files remain visiable from the desktop. Is this a problem with the Falcon and is there a fix, or is it the software not being fully compatible?

Does anyone know of a program that will hide files on a Falcon, I can now successfully change other attributes using a search program but this one doesn't work?

Thanks in advance and thanks to everyone who suggested a file searcher (I've downloaded all the suggestions).

From: msh@mserv1.dl.ac.uk
Message-ID: <3t8tja$4f6@mserv1.dl.ac.uk>
Source record: 162938

Another request now. Are there any programs that will scan floppies or hard disks and make thumbnails of pictures on the disk? I am trying to catalogue my picture collection and would like to be able to automatically generate indexes.

I've used XV on the SUN but the thumbnails are too small to be clear, is there anything for the ST or preferably the Falcon? The pictures are mainly GIF or JPEG. I've tried using APEX Media loading a picture at 640x480 and copying and scaling the image down to 30%. This gets good results and allows several thumbnails to be saved on one picture but is too time consuming to do manually.

All help appreciated. Thanks in advance. Bye!

Hi!

I've been using CAF (Cubase Audio Falcon) for 6 or 7 months now and I must say that it's far from being a truly professional tool. There are just too many flaws within the software, like for instance the timestretch/timecompression function. The sequencer is excellent, but the Audio functions (s.a.) lack that certain professional character. (No audio cueing, no destructive deletion of audio parts one no longer needs, and the list goes on).

Unfortunately, I was misinformed or at least not fully informed by the dealer I bought the software from.

So long, Pete.--

119. Screen Savers / NVDI3-TT

Newsgroup: comp.sys.atari.st
Date: 1995-07-03 00:00:00 UTC
From: mtaylor@perth.DIALix.oz.au
Message-ID: <3t8tvb$43i$1@perth.DIALix.oz.au>
Source record: 162941

Hello,

I have just changed to NVDI3 from Warp9 and now find I am without a screen saver for my TT. If anyone knows of a screen saver that works okay with a TT in High/Medium etc with NVDI then could you please let me know.

Many thanks..
Mark

Before Dawn v1.25 (English) works fine on a PAK3-68020 (it is Gem so very
compatible)
TT Artist : needs a FPU (demo available on a.a.u.e or ftp.cnam.fr)

Try Gemview - the thumbnails are configureable. Imagecopy also does
thumbnails, I think.

You can use the old, bitmapped fonts. The file to edit is ASSIGN.SYS :-).
I think there is a nice accessory to generate that file in the gdos 2.0 package
that is/was available on ftp somewhere.

Hi,

Since the Newton (Apple PDA) seems to become affordable now, I am
wondering whether someone has successfully interfaced this little
machine with his ST or Falcon ?

If you know how to do it, or have seen a file claiming to be able
to do the transfer, please email me.

Thanks in advance
Nat!

To P.K. Benson and all others who have 'left' the Atari camp:

'Chill out?' Heh, physician, heal thyself.

Becoming nostalgic and snooping around the old newsgroup is one thing.
But being so apparently insecure that you have to insult everyone for
sticking with Atari while you went off to peecee land with the mindless
masses is quite another.

If you enjoy your peecee and you are happy with your decision, then more
power to ya. That's cool. But there are plenty of folks that are still
quite happy with their Atari hardware and that's cool, too. Leave 'em be.

oasis@yeadontt.demon.co.uk wrote:

: I am getting sick of the bickering going on between ST(e) and Falcon
: users about why you shuold or should not upgrade to a Falcon!

The _purpose_ of those messages was to create some real conversation,
even by angering people. It seems like this has happened..

: What did I get for my support (nearly 3000 pounds worth for the TT!),
: no support from Atari, no support from the industry (software or hardware).

A very nice computer (I like TT's design), and many excellent programs?

: Now if you follow the arguments about supporting Atari and 'upgrading'
: to a Falcon, I don't see why I should 'upgrade' to a slower machine with a built
: in keyboard (I have sat with a keyboard on my knee since 1989 (not permanently
: you understand :-))). Alright it has better graphcs and sound, but why shuold I
: have to sit around waiting for the Falcon to finish the task I had become
: acustomed to the TT finishing in half (or less) of the time.
: Inspite of all this, I still considered the upgrade, but only to the
: 32MHz 040 Falcon in a PC (sorry for swearing) like case promised by Atari. Now
: that machine I would have upgraded to!

Nobody, I believe, has meant by "supporting Falcons" only Atari
Falcon-030 - but the whole concept of Falcon, which I at least find
attractive. Add a good separate keyboard, 68040-33, PC tower, etc. to
what we have now - and now we see a very attractive computer! I believe
that C-Lab Falcon 040 will pretty much be what we wish right now.

I agree fully on that current F-030 has many more and less serious design
flaws (like the keyboard). But none of these are impossible to improve
yourself, though that costs time and/or money.

: Despite all this, I have done and will continue to stick by the Atari
: platform for a long time. I have never considered a move to the PC world, I,
: unlike the machines do not feel the need to be a clone (mindless in many cases)

I share your thoughts.

: I apologise if the above rant seems a little off subject, but this is
: not the first time Atari have brought a new machine and then pulled the plug!

No, but it may be the last... If Jag will flop, then there'll be no more
Atari. But Atari-compatible computers: they will exist for a long time,
no matter what happens to Atari Corp..

Hi All,

I recently bought 5 Atari 520STe for 15$ a piece.
They didn't have memory and BIOS/TOS.

Which TOS must be installed. Can I use the TOS from my 520ST+ ?
Can I use standard 30-pin 1MB SIMM's
How many do I need to install in the bank (2 or 4) ?

I'd also like a mainboard layout with good description...

Can you help me,
please leave a message...

Sincerely,

Etwald Goes

Nope, NeXTStep is certainly better in that respect, but Windows isn't. Or
could _oyu_ explain why Windows is so slow while GEM is so fast? A friend
of mine uses TwiLight (the screen saver) and impresses Pentium owners with
it's speed, though his machine is "only" a 32 MHz 030 w/ ET4000 board.

138. 2MB STE for sale

Newsgroup: comp.sys.atari.st
Date: 1995-07-04 00:00:00 UTC
From: Vernon Seward <seward@mailhost.magicnet.net>
Message-ID: <3tbs5k$c1u@comet.magicnet.net>
Source record: 162810

Hello all,

After years of dedication to Atari, I've finally decided to call it quits. So, I'm selling my STE. It's been upgraded to 2mb. It has the following stuff:

1 external 3.5" diskette drive
1 20mb external hard drive (shoebox)
Original color monitor.
I even have the original box.

Two large moving boxes full of software, magazines, books, joysticks, paddle controller, cables, etc. (sorry, no modem)

You get all of this for the insanely low price of $400.00.

Please, I'd rather sell the whole thing up front so I will not break up the set.

I live in Florida so, out of state offer will have to pay for shipping.

I work this way: there are 3 large boxes. If we make a deal you send 3/4 of the payment, when it clears I will send two of the 3 boxes (not the one with the computer), you send the final 1/4 and I send the final box when that clears.

I'm sorry to have to do it like this but I've gotten burned before. This way we both have to trust each other. (you more so than me). If you don't like these terms note me and we'll work something out.

Vern Seward

Kev,

Setting up Tcache takes a bit of experimentation. Don't get discouraged.

I've found the CPX -- an English version is available on GEnie -- easier to manage than the ACC for setting up Tcache, BTW.

If you have 4 megs max, try a cache setting of 256K. Use a write delay of about 1 second; that produces a major speedup. The defaults are fine for mosty of the other settings.

From a games point of view yes but all my serious stuff worked OK. As did
Elite, FS2, Monty Python, Railroad Tycoon, Moria, Star Wars...

> Need for 2 Colour monitors...

Eh??

> No Software support...

Possibly

> Too many BUGs and delays....

Bugs - haven't had too many myself

> Hard Drive is to small..

Didn't get and IDE (ptah, ptah) got an Exteranal SCSI - much better

> Unable to upgrade to a built in Hard Drive...

Frankly ARSE to you sir!

>
> No The Falcon is a Dog, it only sold when Atari dumpt them at dumpt
> prices....

Beleive me Rog - if Atari had dumped them at "dumpt" prices then I would
have bought one - but they didn't and I still did, so I guess In your books
I am a first class twat. However I am happy with my Falcon - it works and
doesn't crash (unless I fuck up GEM using Lattice - and it usually manages
to recover then which is more than some other systems can do)

I might not be right all the time but at least I am happy

: Subject: Towers II weapons question

: Hi, I have a little question about those weapons
: in Towers II. When you look at the damage they
: make, some weapons have a letter after the damage.
: Frost sword has the letter 'm', Mace of disruption
: has some else letter etc.. What do these letters
: mean? I have bought the manuals, but they say
: nothing about this.

The 'm' means magical... What this does is on specific creatures the
weapon can do twice the amount of damge... The mace of disruption will
do its normal damage and double damage on undead creatures (zombies,
skeletons, etc)

: Also, I found an amulet of mana (from the 4th
: floor, I guess), but when I put it on, my mana
: doesn't increase. A bug in the code?

Nope, not a bug... if you notice that when you where the amulet and
sleep, your mana will rejuvinate at a much quicker rate...

: Hmm... I can't also get past that one door : on the 4th floor, but perhaps I have to kick
: some live undeads before I get there (via
: teleport I guess).

Not to give too much away.. But I would suggest that you pay close
attention to the scrolls that you found that where written by the scribe and
the messages in the library left by daggan..

] 1) Is enought interest in the Atari community for such an emulator?

Always has been, always will be.

] 2) Are there some programmers out, who have enought knowledge to do a port

If any of the demo-coders want a hand in it, then sure, they do a lot which is "impossible", so the possible they can do straight away :)

] 3) what hardware should be supported

Realistically, running it on a standard ST would be a joke, even on the Falcon would be barely usable (a 16Mhz mac? C'mon.... not these days), the TT could handle it without any problems, it's got the power, it's got the spec's. The Falcon could probably manage it, but it would involve some really good coding to make it worthwhile.

As we all know the falcon isn't going to become the hot Atari computer we all wished (?) for, but that's not the fault of the machine at all. Atari's marketing or lack of it is the reason this computer never got off the ground. I believe however that the machine is GOOD and *even* the price is right. The more I work with it the more amazed I get. (make no mistake, I bought my first one even *before* official import started.) Really, y'all ought to check out these programs: Cubase Audio / APEX media / Calamus / Inshape / Mpegdsp etc. . For instance Apex Media runs animations at speeds that pentiums, without special videohardware, can only dream about. Because of DSP use. Cubase Audio's 8 or even 16 tracks digital cd-quality audio is also unrivalled. So, so what if the falcon is more expensive than a 486DX100 ? It's still BETTER !
And I get fed up with those people saying it stinks. There is not much software around but who needs to be able to choose from 100-s of mediocre software ? Isn't *one* GOOD program enough? Or do you need the choice just because it reminds you of freedom. Or something like that. If I need freedom I don't need my computer for it.
Just buy the computer you feel happy with, but don't keep whining about how much better other brands are. Believe me, they aren't.

Try exchanging the cable and be *very* sure it's connected the right way
(pin 1 = pin 1). if the cable was the wrong way around it is likely the
harddisk died. so watch out for this. If that doesn't help I don't know
what will... Unless the harddisk is configured as slave-drive instead of
master. but factory-shipped default setting should work fine. Good Luck!

You just need to know where to shop. Office supply stores usually
still have both DD and HD disks in both formatted and unformatted
packages. Even Electronics Boutique still sells DD disks under
their own name (I think they're $5.99/10-pack), but I don't recall
if they're only available pre-formatted or unformatted as well.

LM> I'm curious as I am about to become a new Falcon owner. I've
LM> purchased a Falcon with no internal hard drive. Will I need a
LM> special cable to hook up my already-existing array of hard drives; or
LM> will the normal (?)25-pin cable that I currently use suffice?

mmm ,that sounds like the old DMA Cable to me . You'll have to remove the Hostadaptor from the chain and replace the internal HD case cables with 50W centronics at the ends then get a Micro50W (SCSI2) to 50W centronics to connect the Falcon to the SCSI drives.

LM> If I need a special cable, are they proprietary or can they be
LM> bought almost anywhere (Radio Shack comes to mind first ;() TIA

The SCSI2 - Centronics is standard issue but EXPENSIVE :-(
Depending on how many SCSI drives you have in the case you may have to get the ribbon cable made up with a sufficint number of IDC connectors.

If you have CD roms/Tape drives (ext)then should be already rigged with 50W centronics ports so that will just require 50W-50W cent ,standard issue and cheap enough.

Discount Mac retialers would be a good place to try looking for these bits I think ,most of the newer macs use the same set up as this ,older ones used a proprietary port much like the ST.

You are wrong wrong wrong , we are not biast we spend all our time using
technology that we think is crap ...isn't that what everyone else is doing ?
Don't tell me everyone using things they like ..OH NO! Thanks for pointing
this one out to us poor deluded fools !

> had a PC and just had an old ST I thought 'Windows? Pah! I have GEM!!'
> but when I used windows for serious development It was great, nothing
> wrong. Equaly on the ST, GEM is fine... I just prefer windows for the
> extra resolution and superior software available.

What the f*** has windows got to do with resolution you nobhead ? That is a
hardware issue and nothing to do with the operating system !

> Can I run GEM in 1024x768x256 on an ST? No. A Falcon? Maybe...

Not maybe ..yes is the answer. Now can you run this resolution on a 5 year
old PC ,,NO , can you run Windows95 on last years PC with anything less that
12 meg ,,NO! SO what are you saying a brand new car looks more shiny than a
five year old one ??? Wow This is a most earth shattering revelation which we
are glad you pointed out to us !

I have nothing against PC/Windows in its proper place ... which is the office
environment where there are many useful things in there to cut down on
support and user issues . Microsoft go out of there way to put most of there
effort into on-line help ,prompting (wizards <BG>) etc . It is a designed to
be used by even the most idiotic of user ...the trouble is that becuse they
do so they have reduced its appeal to the lowest demoninator the idiot
himself ... you sir appear to be amble proof of that :-)

Hello Selah,
Here are some comments:

> can you please give me your comments, pros and cons ,
> about cubase audio and the atari falcon?
> you see i have the falcon and for 300.00 can gwet cubase audio.
> i have four megs ram and 86 h/d.

Cubase Audio is simply GREAT!
However, to get some speed when updating the graphics, you'll need NVDI
-otherwise you will get quite irritated over the waiting.
I always recommend people to get 16 MB of RAM, but it is possible to work with
4 MB as well. The things you can't use are RAM tracks and Sampler tracks (these
functions are very useful).

> i was told to buy AV quality hard drive (gig or more)
> AV meaning that the platter (disks) will be of composite type material
> so as
> not to expand thermally like metal disks do.
> the reason being that when reading or writing to the disk, calibration
> of sectors needs to be flawless as much info is being transfered while
> doing audio or digital recording.

Only thing that's important is that the disk is no slower than 11 ms and
doesn't make calibrations every now and then. A friend of mine is assembling
HD-towers and he told me that if a customer makes an order for AV-disks, they
only reprogram an EEPROM on the PCB on the hard disk (this disables the
calibration - that was unnecessary in the first place). The disks are no
different at all. Most 1GB drives are fast enough.
I use two standard disks in my recording studio:
one Conner CFP1060S (1GB, 9ms) and one Conner CFP2105S (2.1GB, 9ms) and I
haven't had any problems with these. I use SCSI tools, that gives me a faster
transfer rate that AHDI (about 500 kB/s faster) and therefore makes the drives
less sensitive to fragmentation.

> DO ANY OF YOU HAVE A FALCON USING CUBE AUDIO? are you pleased?
> i would appreciate hearing from europe as i know you guys are big on
> atari. thank you.

I am very pleased with it and my wallet is pleased as well, because if I would
have bought a similar system for PC or Mac, it would have cost me at least
twice the money.

Best regards,

Claes

> deletion of audio parts one no longer needs, and the list goes on).

As far as I am concerned, it is a very professional tool. It fills my needs for hard disk recording. I haven't used Timestretch very much, but as far as I have, it seems to work just fine. As for destruction of not needed audio parts, refer to your manual; you can delete unused audio from within the Pool and if the unwanted audio has been cut out and muted in the editor, it's possible to make a 'permanent mixdown' to get rid of the audio that should not be left in the song - also described in the manual.
If you're not completely happy with the functions that are implemented in the program, you should write down your comments, give them to the dealer and ask them to send them to the national distributor or Steinberg.
I have done so myself in previous versions of Cubase and some updates later there have been some changes of the things that I have complained about.
If enough users want similar changes, it is very likely that Steinberg will make the adjustments, but the main thing is that they'll have to get YOUR point of view. Otherwise they have no chance at all to please your wishes.
The current version is - as far as I know - 2.03.

Best regards

Lucky TT owners like us can afford to ignore these ST(E)/Falcon arguments.
I've supplemented my TT with a PC - but I've most certainly not upgraded
from it.

:-)

Roland.

I got the set from GEnie and have been playing with it for the
last couple of days! Seems to work OK! I have been having a little
trouble getting a version of Elm to work right, but that's probably
my fault, since I installed it myself!

Hello Claes,

|>
|>As far as I am concerned, it is a very professional tool. It fills my needs
for
|>hard disk recording. I haven't used Timestretch very much, but as far as I
|>have, it seems to work just fine.

Well, then give it a try and you'll notice that the various values you fill in
the respective dialogue box(es) of the timestretch function *never* match the
output *exactly*.

As for destruction of not needed audio parts,
|>refer to your manual; you can delete unused audio from within the Pool and if
|>the unwanted audio has been cut out and muted in the editor, it's possible to
|>make a 'permanent mixdown' to get rid of the audio that should not be left in
|>the song - also described in the manual.

Ooops, my fault; that's not what I meant: I was referring to partly deleating
audio from the hard-disk. All you can do is delete an entire recording, but not
parts of this particular recording. Of course, you can delete a segment's/part's
visual reference, but not its audio contents.
|>If you're not completely happy with the functions that are implemented in the
|>program, you should write down your comments, give them to the dealer and ask
|>them to send them to the national distributor or Steinberg.

Guess what I've been doing for the past few months ...

|>I have done so myself in previous versions of Cubase and some updates later
|>there have been some changes of the things that I have complained about.
|>If enough users want similar changes, it is very likely that Steinberg will
|>make the adjustments, but the main thing is that they'll have to get YOUR
point
|>of view.

They certainly know *my* point of view by now.

Otherwise they have no chance at all to please your wishes.
|>The current version is - as far as I know - 2.03.

I know.

Regards from Berlin.

Not true, video cards have been available for the TT for a long time.
There is also a video card for the Falcon now.

>I happen to like the idea of going out and plugging in a universal SIMM,

If you get a RAM expansion card for the Falcon or TT, you can put in
normal (70ns) SIMMs.

Here's the following for sale - US$700 o.b.o.:

* Atari 1040ST, dual drive system (one internal, one external), mouse and
all necessary cabling.

* Color monitor (SC 1224).

* Spectre GCR emulator cartridge. It gives a basic Mac Plus equivalent and
reads/writes to Mac formatted disks. (I'll include Mac software for word
processing if interested).

* IMG Scanner (cartridge based scanner to work in conjunction with the printer).

* Yamaha PSS 680 MIDI keyboard (with cables to attach for use with Music
Studio)

* Star NX-1000 dot matrix printer (with all my unused ribbon cartridges)

* I'll include my whole library of Atari ST disks (all my software collected
over the years).

FINE PRINT:
It is in great condition and I'd like to sell it as a complete whole if
possible. I'm in the New York City area and will consider selling outside
NYC if you're willing to pay for shipping. Price is negotiable...
Please e-mail directly.

Knife ST does not work OK with Falcon (SCSI at least). Once I scanned my SCSI
disks for errors with it, and even after I completely wiped a partition, it
still claimed some files in it were corrupted. Get Diamond Edge for disk
maintenance if you have a Falcon.

>Does anyone know of a program that will hide files on a Falcon, I can now

There IS a destructive deletion of audio parts one no longer needs:
in Audio Pool there's a menu item called "Erase Unused". It does excactly that
for selected audio files in the pool.

If you want to delete audio parts permanently from the Arrange-window,
use Ctrl+Backspace for selected Parts.

Reading the manual helps sometimes :-)

186. New Mac-Emu for Atari

Newsgroup: comp.sys.atari.st
Date: 1995-07-04 00:00:00 UTC
From: para9
Message-ID: <3tbcuq$mbe@coli-gate.coli.uni-sb.de>
Source record: 162890

I would like to ask, if there is interest in the Atari-community for a new Mac-emulator.
There is a shareware Mac-emulator out for the Amiga. it requires 4 MB RAM and at least a 68020. It is very compatible, even games run often.
I asked the author, if he will port it to the Atari, but he said no. However he said, that if some Atari-coders would like to port it, he would probably help them.
So there are now some questions:
1) Is enought interest in the Atari community for such an emulator?
2) Are there some programmers out, who have enought knowledge to do a port
3) what hardware should be supported
(I think, the emulator should run on the Falcon and TT and probably on the Eagle and PAK 030-card; Nova-support would be fine, too)

So tell me please, what you think about that?
My E-Mail address is iagaw@cluster.urz.uni-halle.de

(Maybe there is even a company out there, that would licence the Amiga-version and port it on the Atari)

187. re: brother hl-630

I also just bought an HL-630. I have not printed from my STe yet, since I have been doing most of my work on my Apple Powerbook. The HL-630 emulates an HP Laserjet IIP quite well. This is the driver I am using with my Powerbook and Powerprint software. Is the IIP driver readily available in the ST world? If so, where?

: : > -rw-r--r-- baldrick 1414841 Jun 27 20:14 ./Falcon/Demos/lostblu1.zip

: : Does this demo run on a VGA/multisync-monitor?
: : I'd like to know before getting it.

: No, but get it anyway. It's great! Use a TV or whatever to watch this demo,
: it's worth it. (Requires 7MB hard disk space)

: bye,
: Chris

Watching on a TV set is a bit of a let-down. Why? Well, the demo constantly switches between PAL and NTSC modes between various scenes. When that happens color is lost on an incompatible TV set. There's more to PAL and NTSC than scan rates. The colorburst frequencies are different.

When will these demo programmers get it that not everyone has a SC1224 monitor or a NEC Multisync? I happen to have both a SVGA and SC1224, but that's not the point. Almost everyone uses a VGA monitor of some sort and making an "oooh...aaaah" demo should be done with such a monitor. A demo of Lost Blubb's calibre would much more impressive on a good screen.

If they must make it in a TV mode, then at least make the mode constant and able to be viewed on either a PAL or NTSC set. Besides, it's impossible, in their current state, to make a video tape of it to show to their PC friends or snob acquaintances. Changing scan rates on a VCR litterally destroys any hopes of a reliable and quality copy.

Tommi Pekka Hietavuo (gs01tph@panther.Gsu.EDU) wrote:
: If anyone there has a chance to use professional audio measurement
: equipment, it'd be interesting to measure Falcon's (and possibly other
: computers' too!) audio performance:

: - Frequency response (Falcon: 40..18000 hz +/- 0.5 dB after b.boost rem.)

: - Harmonic distortion in diff. input/output levels: 100, 1000 hz

: - S/N ratio when 100% input/output levels used

: - IM and other distortion types

: etc...

: AND especially interesting..!!! I think, Falcon could be turned into a
: reasonably accurate audio measurement equipment? Accurate spectrum
: analyzer, real-time dynamics measurement, freq. resp, distortions, ...
: Or (for hifi-freaks!) what about loudspeaker's room frequency response
: analysis in real-time?

: Would 56001 be useful for such purposes - opinions/facts..?

: I'd be in 7th Heaven if I found a good shareware program that'd make it
: possible for me to make above mentioned audio measurements at home =-)
: !!! And such system might even create interest among hifi-dealers, if
: done well... Remember: now we don't talk about laboratory-quality
: measurements, but "only" relatively good accuracy. Something that would
: help people to place their loudspeakers, tune-up their cassette decks,
: measure their LP/CD records' dynamics (just for fun..), and so on.

: Am I the only one who finds these possibilities thrilling..?

I too am much interested in such a use. However, I can't even get my
Falcon to even create a lousey echo. Every time I get a program that has
all of those nifty effects. I select them to use with the mic input and
suddenly everything goes silent. Oh well...

Hmmm, the ST has a revision E board, I do need to stick a bunch of
capacitors in it too, what kind do I need? There are a few pairs of soder
switches on the ST too, IIRC one marked 128k (??) and one 1mb...

Does anyone know if it is possible to use HSMODEM with NOS? If it can is it straightforward (i.e. can you use the instructions supplied with it) or are there any caveats that you have to use? Thanks.

198. Help w/dead Megafile 20?

Newsgroup: comp.sys.atari.st
Date: 1995-07-05 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <RI293Bc.johnhechtman@delphi.com>
Source record: 162752

My old Megafile 30 hard drive has finally bit the dust :(It seems to get part way through it's bootup sequence and then lose it. The symptom is that it used to indicate drive access with an LED and a "peep" kind of sound. It would go "peep, peep, peep, peep-peep-peep-peep" and the drives would ID on the startup screen. Now it only does the first part of the routine and the drives never ID. The sound is "peep, peep, peep" without the rapid sound of "peep-peep-peep-peep" that it used to make just before the drives ID'd.

I tried running AHDI manually and the drive doesn't seem to be recognized. I've also tried all the usual tricks in case of drive lockout. I checked it inside (using a static mat and wrist guard) for loose connections and reseated the chip that was socketed. I have TOS 2.06 on the cpu, so I did an "Install Devices" from the desktop and the drive still will not install.

Now my question is, do folks think this is a dead hard drive mechanism, or am I suffering from a bad component on the driver board? I'm an audio tech and replace IC's all the time - if I can find out what IC/transistor/capacitor/etc. is bad, it would be easy for me to replace it. The difference in price if I can repair it is considerable, as I would otherwise have to buy another (used) hard drive. Still, this drive gave me decent value - it cost $100 and lasted for two years of hard use in my MIDI rig ;) Any help in reparing it is greatly appreciated!

|
| First, I did not have to sign a non-disclosure agreement before I got
|the DevKit. Therefore I am not bound by any sort of contract.

Right you are. In their zest to grab that last remaining dollar, Atari dropped the non-disclosure requirement on their devkit stuff when they began selling it to the 'public.' I forgot about that.

The non-disclosure was really a dumb policy to begin with, IMHO. There was -hardly- anything in the mountain of photocopied manuals they sold as a devkit (hard to call it that and keep a straight face) that would be considered an industrial secret. And if you want to encourage and promote the development of software for your machine, it would make a lot more sense to make the info freely available as other companies did. Paying $300 (what it used to cost) for the devkit and 'developer support' (cough-cough) was a sorry joke. One of the benefits was the authority to buy Atari hardware at wholesale prices. Well, not really. Turns out that most larger dealerships (like Toad) could beat or match the dev discount.

Oops. Sorry. Sour grapes and reminiscing don't mix very well. :)

Hi all,

I'm a PC (ughh!) user because I was too foolish and followed the crowd.

Now I'm interested in getting into Atari.

My first need is to have a nice LIVE! setup to playback Cubase sequences
and sync up some other gear via MIDI clock/time code.

One thing I need is to have TWO midi ports, one that spits out midi
and the other that spits out midi AND MIDI CLOCK. I can do this now
on the PC with my MQX-32M dual port midi card and Cubase.

I can't afford to switch to a Falcon right now (I have SAW on the PC)
so if I can get a working system that meets my needs as above for a few
hundred that will work.

Any info you can provide on hardware/tricks (what is MVDI?) and prices
is much appreciated.

Hope to hear from some of you loyal Atari users-help me escape the PC!!!

email me direct if possible, thanks!

You need to use the drivers accessory (or as a prog).

However, Atari advocates will argue its not the hardware that counts is the OS.
Many claim that TOS and TOS applications blow away the Mac OS and apps..

I've got a question for you all: I can remember waaay back when when I bought my first Atari 520 ST
computer. I absolutely loved it. I upgraded to the 1040ST, and finally the Mega ST 4. It was at that point
that I ran into some financial difficulty and had to give up my favorite machine. I did, however, keep all the
software that I loved so much i.e. Brattacus, Sundog, Ultima III, The Phantasie Series, etc etc. Now that
business is doing better, and my longing hasn't ceased, I want my ST BACK!!! But, I come into the market,
and what do I find? Mega STE, STacey, TT, Falcon...can someone please explain to me the improvements/differences in the new machines over my old Mega ST with the Blitter chip I was so excited
about? I mean, my goal is to be able to get a (falcon if necessary) new ST and run all my old software like
the good-ol' days. And hey...it would be great to get in on all of the new stuff I missed as well! Please
advise...Feel free to reply here, or to spn@hitec.com. Thanx for the info!!

P.S. Are there still Atari magazines/periodicals that I can subsribe to? i.e. Antic, STarT, ST Explorer,
Current Notes, etc..

My 2 cents:
I am a former ST, STE and Falcon Owner; I think the STs and STEs were excellent bargains. They really were sort of the poor man's Mac, and Macs in those days were ridiculously expensive. The TTs were powerful machines, really more powerful than just about everything when they came out.
But the Falcon is not a great computer. It was designed around a chip (68030) that was obsolete by the time it was actually in the stores, running at 16 MHz when the TT ran twice as fast on the same chip what, two years earlier? The 040 chip should've been in the Falcon, but Atari was too cheap to use it. The video bus on the Falcon is too slow. The computer took forever to get into stores. Atari announced vaporware products and features for the Falcon and then expected someone else to make them. Remember PIM, the DSP modem, Hard disk recording? The buzz about having the DSP chip onboard? Atari seemed determined to drive their devoted user base away, and they did that very effectively! If all the things Atari promised for the Falcon were true, I'd still be using one!
Worst of all, the Falcon was overpriced! Six month's after buying a Falcon, I sold it and bought a used Mac IIfx/160HD/40 MHz with 8megs (for hundreds less) that ran circles around the Falcon; and using the same 030 chip, too! For the same $$ I spent on a Falcon, I recently bought a powermac 6100/60/250 with 8megs and a CD rom drive. I can accelerate this computer to 84MHz for $60! How much was that Wizztronics accelerator board supposed to cost? $450 or so?
I remember a long time ago Atari used to advertise ST's as "power without the price". Somewhere along the line the stopped saying that: that's where they screwed up.....

: CL> wondering if I could steal 512k off of it and put them in this
: CL> 520STfm. When I opened it up it had two banks of RAM, one was
: CL> unfilled. Where can I get a text file detaling how to do this type of
: CL> upgrade? And a memory check program to see if it works when I'm
: CL> done...
:
: It's too simple a job to require a text file, I think. The texts I HAVE
: seen (by Barry Orlando et. al.) are to do with the replacement of 4164
: chips with 1Mbit chips to obtain 2Mb in each bank.
:
: The PC has 36 chips because it supports a parity bit for each byte.
:
: I guess the safest approach (provided there is space) is to solder sockets
: onto the ST motherboard and then plug in the new chips - this will save
: possible overheating of the chips if you are not experienced in soldering
: these sort of devices. The control lines you need RAS1 CAS1H and CAS1L
: should already be on the PCB.
:
: The FREERAM.ACC is possibly good enough to show you that all is OK but if
: you have troubles then MEM12.PRG (PD) is prob. as good as any or the demo
: version (PD) of ATARITST.PRG.
:
: CL> There are three brands of chips on it, Mortoloa (sp!) model number
: CL> MCM4164CP15, Oki model number M3764-20RS, and a no-name brand of

221. monitor for STfm (UK)

Newsgroup: comp.sys.atari.st
Date: 1995-07-05 00:00:00 UTC
From: h9104374@hkuxa.hku.hk
Message-ID: <DB8E8u.273@hkuxb.hku.hk>
Source record: 162775

Hello,

Recently I got a 520STfm (UK) and I am using the TV (PAL) so far.
The TV is OK at low resolution but it makes me hard to use at medium
resolution which is required for 80 cols text. I also have an Apple //e
with a green monitor (NTSC I think). Is it possible to share the monitor
between the two computers? BTW, the ST manual says that there is a
composite video out in the monitor port. Could anyone please tell me what
is this used for?

Thanks for your help.

William

[snip]

All very true. Still, I wouldn't trade it for any other computer. I *will*
buy a Mac, but not *instead* of my Falcon but in addition of.
Talk about vaporware: Win '95... MS must have liked the "real soon now"
slogan...

>I recently bought a powermac 6100/60/250 with 8megs and a CD rom drive.
[snip]

8 Megs in a PowerMac ? You badly need a memory-upgrade then, don't you ?
I'm surprised it boots at all. Still nice machine though...

>Sacha.

Indeed, use NVDI.
Also, in Germany they manufacture an accelerator-card named HBS-640.
It runs at 28 MHz, is 100 % stable, compatible with midisoftware (*if* the
software runs on a 16 MHz machine, that is) and retails for about
$250. I hope they have them over there.

>appreciated!

If the drive power-up 'beeps' are totally absent it's likely the
drive-motor doesn't spin up. If, as in your case, it stops halfway while
initialising either the hostadapter (the big atari-PCB) or the drive is
dead. Neither is worth repairing in my opinion, but judge that for yourself.
Try pushing the 'BIOS'-chip in its socket, that could also help. You can
find it near the dip-switches inside. It's the big chip with a white
label on it.

From: sirsmedley@delphi.com
Message-ID: <pk5f3FU.sirsmedley@delphi.com>
Source record: 162783

OK, this time I DO have an official press release!

-=-

The Atari Users of North Texas Computer Exposition

The Atari Users of North Texas (AUNT) presents the D/FW Exchange Underground Computer Exposition (DEUCE). The show will be held in Dallas this October in conjunction with the monthly DFW XChange Corporation "Super Saturday" activities at the beautiful Dallas Infomart. Show date is Saturday, October 7th. The exposition, along with the Super Saturday activities, is free and open to the general public. The one day exposition will begin at 8:30 AM and run until 4:00 PM. Both a Friday evening pre-show get together and a post show get together are also being planned.

October is a great time to visit the Dallas/Fort Worth Metroplex. For one thing we probably have better weather in October than most of the rest of the world. The DFW Xchange Corporation "Super Saturday" activities are a monthly computer extravaganza where thousands of computer enthusiast get together, share their computer interests and enjoy some of the best computer and high-tech electronic buys in Texas. This October will be special for us Atarians because many of our finest developers and dealers will be participating in the activities.

The Dallas Infomart facility - a replica of the famous 1895 World Fair Crystal Palace - is located in the heart of the Dallas Market District. The facility is leased by the DFW Xchange Corporation each month to provide a community service to all computer users in the Metroplex area. The Atari Users of North Texas is one of many participating user groups that help support this community service by sharing our Atari computer interests, general computer expertise and providing user assistance to our local Atarians and the interested general public.

Vendors currently planning on participating include; It's All Relative, Systems for Tomorrow, chroMagic, Crawly Crypt Corporation, Oregon Research, Dave Munsie, DMJ software and Branch Always Software.

Vendors interested in participating can contact:
David Acklam

Hutch,
One big advantage of a new Mac emulator would be support for the Falcon :-). I would love to buy Spectre GCR but it just won't work on my Falc.
Would it be possible to use the Mac Magix approach? A compatible OS? That would be neat and would allow Atari users access to very user-friendly networking software (which is what I want on my Falcon.... which is what most people here want....).
Of course, if some kind soul would just make a user-friendly SLIP/PPP program I'd be happy to just stick with all Atari software :-).

Just thought I must pen a message to ya, first time I knew ya was on
Internet!!! I'd just like to thank you for KID KONG, one of the best
non-commercial games I have ever played!!! If you're after ideas, how
about an ST clone of "Scramble", I've never seen one on the ST, I have seen
it on the Speccy. It was one of the best games ever in the arcades, where
you flew over a horizontally scrolling landscape with fuel tanks and
missiles etc down below you had to bomb.

Cheers

I used to use WordUp myself, I loved it. Had version 3.0, I think.

Anyway, this is EASY. WordUp is a GDOS based application. Just get a newer version of GDOS - Speedo GDOS should work great, since I have tested WordUp with that. He'll get more fonts AND a wonderful printer driver for the Deskjet 540, PLUS a faster GDOS.

As for printing from the desktop, there is a cool program written a few years back called EPS Jet, which was a software Epson emulator for the HP Deskjets. BUT - it doesn't like GDOS, so don't have both loaded at the same time! Crash city.

Sorry - i do not use SozobonX yet (i work with Pure C).

> What is a good text editor for editing C code?

Try Everest. The latest version is 3.5. Really fast, runs with 1MB,
and supports user defined 'shortcuts':

e.g. enter 'pr', press [Esc] and 'printf(' will occur. ;-) Really nice.

Ciao...

MintNet supports PPP. All binaries are on atari.archive and mirrors.
You need a recent version of Mint (1.12 or later), MintNet (0.72 is
current), and the PPP daemon. I'm not sure what you'll need to do the
dialling.

242. Internet & GEM

Newsgroup: comp.sys.atari.st
Date: 1995-07-05 00:00:00 UTC
From: aw@zaphot.augusta.de
Message-ID: <FGFDBBBRUP@zaphot.augusta.de>
Source record: 162848

Hello,

I'm thinking about developing a kind of 'internet sockets' for GEM
(similar to WinSockets for Windows etc.) wich will run without MiNT(!)
and can be used on MagiC!3 too.

Based this - finally some services should be integrated in the
desktop 'Thing' - just some external modules wich provide simple
internet access via modem by double-clicking some icons ;-).

Maybe FTP may be used then in this way:

1. Login, open FTP service
2. Open an FTP-server - a new desktop window appears,
containing the current FTP-directory
3. Drag&Drop icons from the FTP-window to a local
directory window to get files from the server and
vice versa

Or another example:

1. Open the local 'mail' window - a window appears containing
several folders 'incoming', 'outgoing' etc.
2. Open 'outgoing', then select 'new' - a dialog box appears
asking for 'To:', 'Subject:' etc.
3. An empty mail file will be created and an application wich
is able to edit text files will be started by the desktop
4. After exiting the editor, the mail file will be stored into
'outgoing'-directory ready to be sent
5. Double-click 'caller' icon to send/recieve mails/news via UUCP

Maybe this is only illusion - maybe it is impossible to realize
such things - so i have some questions:

1) Where can i find documentation about UUCP, SL/IP and PPP?
3) Where can i find sources to realize UUCP, SL/IP, PPP protocols?
2) Wich books should i read to get the technical background for
a 'sockets' implementation, TCP/IP etc.?

Ciao...

Source record: 162850

In a previous article, iagaw@cluster.urz.uni-halle.de wrote:

| I would like to ask, if there is interest in the Atari-community for a new
| Mac-emulator.

Interest? Sure. But unless it supports color and is System 7 compatible I
can't see how it could beat the Spectre GCR which is well done, highly
compatible (with System 6.x) and often available used for a song.

How does it handle the Mac ROMs requirement? If it is software only, then
does he license the Mac OS from Apple? Or does the software include an
image of the MacROMs as did that old pirated Spectre 128 code? The former
would make it expensive and the latter would be highly illegal. If it uses
some kind of hardware, then how do you manage that via shareware?

| (Maybe there is even a company out there, that would licence the
| Amiga-version and port it on the Atari)

Licensing generally entails paying a fee to the license-holder (usually
a one-time flat fee plus a percentage royalty based on future sales).
I don't know if the current Atari shareware market would pay that back.

>I have downloaded sozbin11, sozlib14 and sozuti08. I have set them up and
>I have a few questions:

> Do I need any of the patches in the directory?

No, those are for updating from previous versions.

> Why use c68?

It's full ANSI, so you get function prototypes, token pasting in the
preprocessor, etc. You also get sizeof(size_t) == 4, which has always
been one of my pet peeves in the Sozobon family.

> What is a good shell to use under a normal GEM enviroment on a 1mb ST?

In 1meg, you could probably run bash. I use tcsh, but that's probably a
bit big for your system.

Oh, wait, do you mean a GEM shell? Well, there's C-Desk, by someone
whose name completely escapes me.

> What is a good text editor for editing C code?

I use vi, because that's what I'm familiar with. Others swear by emacs,
though in 1meg you'd probably have to run MicroEmacs.

: GEnie (I've got a problem downloading from my Inet account :^{)? Any help
: would be greatly appreciated. Thanks &

HQX files... don't know any for the Atari... and the one on the PC is
basically crap. You will need a mac, and the one to go for is
definitely one called Stuffitt Expander.. now at version 3.5.2. This
is basically free, and uncompresses other archive formats too. There
is an add on for it, called Drop Stuff with Expander, and this is
shareware. Well worth it if you have a Mac.

Both are available from the HENSA archives. :-)

: |>The ST, despite its 8MHz speed still does things much faster than even
: |>486 and even PowerMac systems. It's not necessarily the hardware design

: but just name me one *thing* ....

No problem, I'll give two examples (though not entirely the only ones):

Loading a program on my PowerMac litterally can take minutes. Accessing fonts can take minutes. My Falcon and ST do it in seconds. On my PowerMac I use hundreds of fonts all of which I use quite frequently. I use the same exact fonts on my Falcon (True Type). The PowerMac seems to go to perpetual sleep scanning and scanning them just to even show a lousey popuop list of them, not to mention the loading time. The Falcon, with NVDI, does it once and writes the info to a file. Even the original scan only takes a few seconds.

I have 16 megs of memory on my PowerMac, and loading most useful software takes a minimum of two minutes (even with Adobe disabled).

Try loading decent software on a PC, of which I also own (486DX4-100). It takes six minutes at times to load, not to mention the sometimes slow response time of Windoze. A PC, by its very design, is inefficient. It can only work with small banks of memory at a time to remain "compatible". Hence the reason for memory swapping in software that causes its inevitable slowdowns. This doesn't include the typical "let's use up 4 megs of RAM just to draw a circle on the screen" programming phylosophy.

: |>I happen to like the idea of going out and plugging in a universal SIMM,
: |>or video card. I'm not saying a PC style one (what a nightmare!). Slots
: |>are a blessing and make a market for third party network of products. A

: Certainly not; they're outta biz!!!

Uh Pete....Who's outta biz??? Remember, Atari NEVER had an expansion design. The "Processor Direct" slot is not what I was talking about. The PC and Mac world have multitudes of products for expansion to their computers because the computers have been designed for expansion (yes, Apple came around later).

Rich

: >I happen to like the idea of going out and plugging in a universal SIMM,

: If you get a RAM expansion card for the Falcon or TT, you can put in
: normal (70ns) SIMMs.

Chris, now that you have put in a video card and a nifty bitchin' SIMM card, how do you plug anything else in???? Does the video card improve the performance of the machine, or does it still suffer from the damn slow bus bottleneck??

The only way to really get the machine to perform better is to cut a half a million traces, run wires, and recase the damn thing. How many PCs and Macs have you heard of that you had to cut traces on??? ZERO!

It would be nice just to be able to install a measely L2 cache without having to install an entirely new CPU card in the processor direct slot, or using a friggin' microscope to desolder the existing one!

Now that I'm complaining...:-)...

I'd like to be able to put my keyboard in my lap.

I'd like to be able to have physical tactile feedback on my keyboard, instead of it feeling like half melted Jello and a sissy chip-click from the speaker.

I'd like to be able to not have 4 foot deep desk just to be able to set my monitor behind my falcon, instead of a nine mile long monitor adapter with lame blowup adapter hanging behind it. Thus ruining all hope of comfortable use.

I'd like to be able to get at my mouse and joystick connectors without having to make an expedition to China!

I'd like to be able to use software that doesn't demand I switch to a TV mode (or SC1224 mode) just so I can see the damn thing! Flipping cables SUCKS!

I wish my second serial port could actually serve a useful purpose!

I wish I could actually install a decent internal hard drive, instead of a lame notebook, overpriced, with a connection nobody else uses connector one! I wish that my 540Meg internal drive wouldn't have to sit outside, because the case is too damned small!

I wish the Falcon's sound output minimum level wasn't set to jet-thrust level and maximum wasn't at Mount St. Helens eruption "whisper" level!

Whew! I feel much better 8-)

Rich

Controversy and argument, when done intelligently, actually makes for
excellent conversation. You may find that if you analyze your own
private verbal conversations you will find that differing opinions are
being expressed, but not necessarily being vehemently fought over. You
may find that expressing belief and opinion is quite stimulating and
satisfying as is listening to and understanding a differing belief.
Hearing the opposite side does not in any way diminish the validity of
your beliefs, nor of the other's. It's simply called debate.

It's how societies are formed and friendships are built. It's like the
phrase, "A friend is someone who knows all about you, but likes you
anyway." My friends always give differing opinions. Who wants an
ass-kissing friend???

Hey, this is Internet, not USAnet. If something is not available in USA, it does
not mean it is a bad product or looser stuff. If you're happy with your Mac, so
be it. Quote form Star Wars' "Imperial Strikes Back": "I'm just wondering -
why are you here?" (Yoda).

>Its not available. How can you recommend to the public to consider the ST
>platform when there are better alternatives?

What you think is better is not what I consider better, and the reader prefers
something else. Falcon works for me, I do music with it, and I like working
with it. What's the problem if I tell it to other people? I'd rather tell
that, than bash PC and Mac in the first conversation (your doing the opposite).
My advice alone won't certainly make people rush for Falcon.
If you'd sell me your Performa, the first thing I'll ask: how many tracks of
digital audio is the available? You say 2, or 4 with cards, and I'll say I'm
not going to buy it because I don't want to put money into something that's
included in Falcon. But even then, your computer might suite for someone else.

PS. please stop quoting signatures!

>visual reference, but not its audio contents.

You can delete unused segment's from any Audio File (Parts are also segments)
from inside the Pool - use "erase unused" -command. It removes unused
segments from the audio file, and the rebuilds the remaining segments into
one "gap-less" file, with new .WIF-file. Save the song after that.
In this case "unused" refer to audio segments, which are used in
current Arrangement-window.

> I'm surprised it boots at all. Still nice machine though...

Well, I don't know about "badly"! <gr> Boots up every time in about 30 seconds.The system software takes up about 4 megs,but I use a program called RamDoubler: it really does work well: it makes my compuer think I have 16megs. Best of all, it's almost completely transparent. I can easily run 7 or 8 applications without running out of memory. I've got 6 apps loaded right now: Eudora (email), Netscape (web browser), audio CD player (obvious),Interslip (slip connection), JPEGview (graphics viewer), and Newswatcher (newsreader). My Memory control panel tells me that I've got about 5megs still availible. I'd say it's the best $50 you can spend on your Mac.
OTOH, I haven't met a computer owner yet who doesn't want more memory.......

Well, sure. I assume that would -have- to be a given for any new Mac emulator to be successful. It would have to offer some significant advantages over the GCR... such as Falcon and System 7 compatibility.

The biggest problem I see, however, is getting that relatively lame 16MHz 030 in the Falcon to jump through hoops under Mac emulation. The days of the old 8MHz Mac Classic are long over and people today have come to expect 040-like performance. Least I know I have. :)

> languages to use.

OK, first and foremost, be advised that I do NOT like HiSoft BASIC.
I am an old (OK, knock off that snickering in the back row) GFA user
and I am very comfortable with it and its, er, idiosyncracies. But...
having said all that, I'd recommend you use the latest version (whatever
that is now) of HiSoft BASIC for the project you describe.

Using GFA 3.5 or 3.6 with TOS 4.x requires a few workarounds on some
GEM calls. It's mostly just inconvenient but still a hassle. The new
version of HiSoft BASIC, however, is -supposedly- fully compatible
with the Falcon's goodies and TOS 4.x and HiSoft continues to support
the Atari platform. In your case, since your programming environment
will be on the Falcon, I'd bite the bullet and go with HiSoft. BTW, GFA's
editor works in medium res on my Falcon so I don't know why yours won't.

You didn't mention any other languages (like C) so I won't either. :)

> (PS does anyone know anything about a rumour concerning GFA Basic

Fact: GFA has abandoned support for the Atari market altogether. They
forgot their roots and went off chasing the almighty DOS & Windoze
dollar (deutschmark, pound, yen, yer choice). They made a pretty nice
product too, but their lousy docs and poor marketing (sound familiar?)
have just about killed their share of the USA market. I'm not sure how
they are doing in Europe but I imagine it's a similar story.

Rumor: Another outfit (Richter GmbH, I recall) had 'supposedly' nearly
completed a complete rewrite of the language before falling into a
legal disagreement with GFA Systemtechnik. Before it could be resolved
the Atari market died off so much as to make the project unviable.

My Guess: I don't think we'll ever see another version of GFA BASIC.
Then again, I don't think we'll ever see another personal computer
from Atari Corporation, either. But time will tell, yes? ;-)

Really? What 'GEM' product did _Apple_ make for the _PC_? I don't recall.

I do remember GEM by Digital Research for the PC, at least their GEM Desktop, GEM Draw and GEM Paint products. This was around '85 or so and long before Windoze. At the time I thought it was fairly impressive. The only involvement that Apple had, AFAIK, was to successfully sue Digital Research for the 'look and feel' of their desktop. The fact that Apple got their desktop ideas from Xerox Parc is another matter. ;-)

I think that is what he meant with 'apple made GEM a crippled product' :-).
Wasn't they forced to remove the trashcan on PC-gem due to apples legal
adventures? Maybe there were other things as well.

Regards, Christer.

How I laughed when I saw the sticker on the front of the Sex issue of Atari World, bearing the message "Page 43 has not been printed for legal reasons". Closer inspection revealed that the page in question was part of the feature on computer pornography (surprise surprise) and had actually been torn out.

Does anybody know exactly what was on page 43? I'd guess that it was either an image so questionable that it couldn't even be printed "spotted out", or, given that there were pictures of Barbie wearing bondage gear on the front cover and throughout the feature, it was a couple of Barbies in a lesbian love scene and Mattel (or whoever) took a rather dim view of it.

: work in anything but ST High (I'm using a 4MB Falcon). Is it possible to
: use the new AES 3D dialogs with GFA?

The GFA editor only operates in the ST Compatible resolutions. Yes, you can do anything with GFA do do with GEM, including 3D diaolgues, but it's just a lot more fiddly than HiSoft BASIC. The other advantage of HBASIC is that you can have Header files, and include other files in your programme.

One other reply said that HiSoft BASIC was "supposedly" compatible with all the MiNT and AES 4 etc. enhancements. Well, it's not just supposedly, it really is, unlike GFA. And it' still supported by HiSoft, though they aren't that interested when problems are reported to them, but it's better than no support at all.

All in all, I would suggest that you use HiSoft BASIC, as it is much more GEM friendly, and supports GEM and the latest enhancements much more comprehensively than GFA. And the manual is much better than GFAs, IMHO, but it's still got a few errors. What yuo really need is the Compendium, as the manual lacks any mention of the latest things like iconification, MiNT specific calls, Falcon030 sound system calls and so forth. Naturally all these are fully supported by HBASIC, but not mentioned in the manual.

I think you'll find that with GFA, you'll have quite a job keeping up with all the latest bits and pieces, and just with GEM programming in general it can be a pain, as some calls have major limitations, and some calls are missing, meaning that you have to write yuor own "library" for them in BASIC and as you can't include headers, this is a real nuisance!

The other thing is, if yuo want to save yourself a lot of bother writing non-modal dialogue routines and whatnot, HBASIC comes with a GEM "toolkit" of routines which are designed to do all this for you. They are somewhat buggy, however, and I use a *very* heavily modified version of them. But they do the job, and with a few minor modifications, they can be fairly bug free.

Of course, you could switch to C like most people do, but IMHO, there are no advantages offered by C for most applications, so if you're used to BASIC, why shift just because "it's the thing to do"?

271. Atari FTP list update!

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having

to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available at your site. If you don't, ask your local system operator how to transfer files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer. i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

>it) or are there any caveats that you have to use? Thanks.

Yup (living proof before you :-))

It seemed straightforward to me: I used the setup program to set it up
as advised by ST User (I originally had HSM04 off their cover disk).
Am now using HSM06 with the same settings. This is on an STE, BTW.
Things seem to get more complicated on a TT or Falcon due to extra
serial ports, different chips etc, about which I know zip.

If you want to know the settings for an STE (as advised by the
magazine), mail me and I'll dig out the article.

```

There's a difference though, Diamond Format is commercial, DC-Format is shareware (and no longer supported, so for most practical purposes, it's PD).

You're hard put to find a PC that will read ST-formatted 10 sector disks or ones with skewed/twisted sector format. The vast majority will only read 9 sector, standard sector (1,2,3,4,5,6,7,8,9) format disks. You do find the occassional one that will handle odd formats though.

Just format the disk on the PC, keeps troubles to an absolute minimum.

Source record: 162732

] Use FLASH, STORM or stalker. All have the ability to be used on the
] internet. Also interlink has a VT100 module. Regards, Terry

Flash & Stalker are commercial. Storm is probably no longer supported
and full of bugs.

For cheap, good, fast VT100 emulation on a standard ST in medium/high
resolution, Uniterm does the job well. It has little in the way of
features, but its VT100 is better than all the other shareware/PD programs,
with the possible exception of Connect, which isn't as cheap, or simple.

```

I wrote a paper about transfering files between differents machines in
french magazine STMAG and I tried differents ways of formating.

A disk formated on the desktop of a TT (TOS 3.06) is accepted by a PC, but
not by a Mac. I didn't try with a Mega STE.

A disk formated with Kobold 2.5 (commercial), Fastcopy Pro (commercial),
Ease (commercial), Le Redacteur 3 and 4 (commercial) or Gemini (shareware)
is accepted by PC and Mac.

A disk formated with Calamus SL (commercial) is accepted by a Mac, but not
by a PC.

I've made tests with Gembench between a TT in 16 colors with Magic and without NVDI (because I havn't NVDI for MagicMac) and a Power Mac 7100/80 with Magic Mac and in 16 colors.

A TT with Magic on the 7100/80 is twice faster than a basic TT (so I don't think that it could be the same on a 6100).
MagicMac on Power PC is twice faster (on average) than the TT with Magic.
And MagicMac with special NVDI will be better.

MagicMac works on PowerPc but it's not a native version, you know that. So it van't recognize the FPU of the Power mac. And a TT has a FPU. So the average speed given by Gembench is lowered by the operations with floating points.

A native version will be better for Magic and Ease, but I don't think that applications written for GEM and TOS will use the FPU of the Power Mac.

Sure there's a demo available ! Everyday there's messages in this group which tell about this demo (in two versions : german and english).
Try to find MagicMac 1.2.1 E demo (english). It's everywhere on the ftp (info Mac, Umich...) and it's given with a PRG to config the keyboard.

289. Falcon power supply parts?

Newsgroup: comp.sys.atari.st
Date: 1995-07-06 00:00:00 UTC
From: lamarth@delphi.com
Message-ID: <Bc08vRn.lamarth@delphi.com>
Source record: 162742

I've got a Falcon030 with a bad power supply. I know which part has gone bad and rather than buying a new power supply (at $100) I'd like to fix the one I have. However I need a parts source for these power supplies or at least someone to tell me what is an equivalent part to the one I have. The bad part is a heat-sinked transistor reference designator Q1, the manufacturer's logo says "FEC" and it's marked '2801 K1010' The power supply itself is manufacured by Skynet Electronics.

Failing this, if anyone out there has a dead Falcon with a good power supply I'd be interested in working a deal....

You can tap out the composite video signal (plus a ground) and feed it into a monochrome monitor. I have not tried using an Apple //e green monitor but I have tried with one of those security monitor which is monochrome, way back in 1989. Just make a plug for the ST and green monitor, there is no harm in just trying out.

Fellow Atarians a plea for help,

I've had an account on Demon now for some time but only recently have I tried to use IRC. I can't run a terminal emulator under my PPP software (KA9QNOS ver 4.2) but I can get NOS to run under vt100emu. When I join an IRC channel however it all goes wrong. My command line is corrupted by incoming text and the screen doesn't scroll. This is driving me nuts (well nuttier anyhow) ! Has anyone else tried IRC under NOS ? Any help would be gratefuly received.

Cheers

Sean

They are used by Apple Mac users to transmit binary files as ASCII text,
something like UUencoded files on Atari's & PC's.

Files generated by the program BINHEX (or equivalent) on the Apple MAC
have the HQX extension.

I don't know of an Atari version, but there are supposed to be PC versions
available.

Previous MIST shows have only seen one or two of us from the Suburban Chicago ATarians attend the show. This year there has been interest from several others in the club and I think we will have a strong showing (at least 6 of us and a few maybes) in Indiana on July 29th. (The club is hoping to get a table - so come by and say hi.)

I didn't notice Yat Siu on the list of vendors :^(but would encourage him to think of attending :^). I have been demoing Apex Media in this area and I think I have generated some interest in it. I know I personally would love to see the new Expose' video capture - or at least some output from it. And there is all the Lexicor software too.

I hope It's All Relative is also able to make it. Their help in bringing us into the world of cd-rom is always appreciated.

And ICD with the CatBox, maybe a fix for ICD Pro Utilities so we can make full use of the Zip Drive (hint, hint) - and we always need hard drive and tape backup devices.

I talked to Oregon Research the other day. They unfortunately don't sound like they will make it despite having many upgrades to the fine products they offer. I will miss seeing John this year, I guess :^(.

And for those vendors already making the committment - thank you. It makes it easier to sell the show to club members when I can point to vendors that are attending. Thank you Toad, Branch Always, Gribnif, Clear Thinking, MissionWare, chroMAGIC, Crawly Crypt, MARS, MTS, Barebones, and Systems for Tomorrow (hope I haven't missed anyone.) Wayne

308. Overscan info reqd.

Newsgroup: comp.sys.atari.st

Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I've just been trawling around some ftp sites, and I found details of the 'overscan' mod. Now, some of this seems a bit of a kludge (especially for mono monitors - setting pixel colours to black so that flyback beams aren't seen?). I also found a commercial overscan mod (Auto Overscan - in an old copy of STFormat) that conists of two chips on a circuit board - Incidentally the developer of the commercial overscan is the same guy that developed the PD version).

What I want to know is: How does the commercial overscan mod work? Is it just that you can change resolutions using software? Or is a new blanking signal generated by these two chips?

I'm going to have a go at the mod whatever, but I'd just like to know the difference!!

Thanks for any help.

john..

Check out the internet standards resp. RFCs. Should be on any larger server,
or try nic.nordu.net (anonymous ftp).
> 3) Where can i find sources to realize UUCP, SL/IP, PPP protocols?
Maybe the linux sources?

Good luck!

: So there are now some questions:
: 1) Is enought interest in the Atari community for such an emulator?
: 2) Are there some programmers out, who have enought knowledge to do a port
: 3) what hardware should be supported
: (I think, the emulator should run on the Falcon and TT and probably on the
: Eagle and PAK 030-card; Nova-support would be fine, too)

You should try to aim for the largest user base possible. I think
(and correct me if I am wrong) that you should ignore anything with
less than a 68030 in it (I do not know of any TOS machines with 020's
in them). OK , 68000 STFM support would be nice, but we have to talk
practicalities.

I have a PAK board so would be interested if I could use the emu
under ST Mono mode or cheaply(ish) put a graphics card onto my
system.

This idea should be heavily encouraged as it will give a whole new
lease of life to Atari owners...

>resolution, Uniterm does the job well. It has little in the way of
>features, but its VT100 is better than all the other shareware/PD programs,
>with the possible exception of Connect, which isn't as cheap, or simple.

I don't remember seeing it mentioned in this newsgroup before, but I swear by ST Term. It's quite old (1988) but it stands up extremely well, with built-in support for tons of file transfer protocols including Kermit and Z-Modem. Lots of keyboard shortcuts and (best of all) it's TOS-based - I've never found any reason to switch to another program. As soon as I start it up, I type the dial command and then start the on-screen timer counting in seconds with ALT-O and ALT-CTRL-R. Fantastic.

>

Nope - still no good.

A PPC can emulate a PC fairly well - but WINE is not going to run
sufficiently well under a MiNT/MiNT-X combination on even the most powerful
of current machines - assuming of course the necessary INTEL emulator
existed - which currently it doesn't.

All AFAIK and IMHO of course.

Roland.

>
>Really? What 'GEM' product did _Apple_ make for the _PC_? I don't recall.

I think he meant that BECAUSE Apple forced Digital Research to cripple the
GEM implementation on the PC, that it made its attractiveness severely
diminished.

As I recall, Atari flatly refused to alter the GEM implementation in the ST
series. (i.e. get rid of trash can, etc).

A couple of interesting notes -

1) Microsoft was seriously trying to get Atari to use Windows ('85) as the
operating system for the ST. Terrible product at the time, but . . . what
if Microsoft advertising kicked in for the ST line . . .

2) Anyone remember the Hewlett Packard NewWave desktop? Similar to
GEM/Mac OS. . .

>The only involvement that Apple had, AFAIK, was to successfully sue

You don't mention a word about the software you were using on your Falcon.
Did you do only speed tests, or what? Did you run Cubase Audio 2, Connect,
Screenblaster III, APEX, Winrec 4.1, Mezei Attila's JV-1080 editor,
No!desk, Diamond Edge, DA's Vector Pro, DA`s Layout, NVDI 3, Papyrus Gold,
Filesearch 7, ST Guide, Junior office, KIVI, Ease, Thing, Fortune, 525,
Bobtracker, Imagecopy 3, Eb_edpov, Xenomorph, Inshape, Neon 3D, etc. etc.
??????????

If you didn't, you obviously didn't even scratch the surface of new Atari-
programs available.

Get the Auto Overscan,. it works 100% for me, no the real one does not have
those hacks....

The Real one uses 2 Gals/Pals what ever and you get driver software that can
be set up for the program that don't like Overscan....

I'm not too clued up about the TT internals, but from what I
understand increased resolutions on the gfx card do *not* hog the CPU
bus any more. This is unlike the Falcon built-in video, and probably
the TT built-in video as well.

>The only way to really get the machine to perform better is to cut a half
>a million traces, run wires, and recase the damn thing. How many PCs and
>Macs have you heard of that you had to cut traces on??? ZERO!

You just buy a faster motherboard for your PC or Mac, just like you do
for a TT. Except there aren't any faster mbs for the TT :-(

>It would be nice just to be able to install a measely L2 cache without
>having to install an entirely new CPU card in the processor direct slot,
>or using a friggin' microscope to desolder the existing one!

Yes, more cache would help I am sure. Why has no-one tried to design
one? I mean there are CPU/FPU accelerators (to 48MHz), but no cache boards!

Has anyone had any luck getting the side menus to work in TrueImage under MagicC Mac. The program runs fine and drop-down menus work, but the side menus off the drop downs don't function. I have the patch program included with Magic loaded into the Auto/Apps folder. ImageCopy 3.5 CD works well with no menu problems, however I did have to set the video display to the Matrix or Crazy Dots setting to get the proper display. DA's Vector works fine as does PageStream and STalker if anyone is interested.

328. www..how?

Newsgroup: comp.sys.atari.st
Date: 1995-07-07 00:00:00 UTC
From: plug@pavilion.co.uk
Message-ID: <805132594_OASIS_@pavilion.co.uk>
Source record: 162675

Can anyone tell me how I get to use the web on an Atari (Falcon), I am currently using NOS/OASIS to access Pavilion in Brighton. I finally got email and news working properly after getting hold of a version of NOS which includes POP.
I am told I can use Lynx with Mint, but from what I've seen it all looks a bit horrendous to setup. Is there a simple way avoiding Mint?
Thanks in advance for helpful suggestions.
(I am new to the net, so don't get too technical with me!!)

g> The 'm' means magical... What this does is on specific creatures the
g> weapon can do twice the amount of damge... The mace of disruption will

Thanks for the info. I guessed it was something to do with magical,
but I hadn't realized it did special damage to certain creatures.
I guess the Iron golems will bite the Sword of Rust from this day
on ;-).

g> Not to give too much away.. But I would suggest that you pay close
g> attention to the scrolls that you found that where written by the scribe
g> the messages in the library left by daggan..

I've read them carefully. Anyway, I've gotten past that door,
and I have soon completed the whole game (only the tests to
complete and the door in the roof). What a great game it
has been, I haven't been this much into one game since
Dungeon Master!

Overdose from Aggression is good. If you seriously want to watch demos
you should get 1 mb STE or 4 mb Falcon.

332. German <-> US Keyboard

Newsgroup: comp.sys.atari.st
Date: 1995-07-07 00:00:00 UTC
From: Christian Bantzer <bantzer@atmos.washington.edu>
Message-ID: <3tk85f$lon@nntp5.u.washington.edu>
Source record: 162679

Hi,
I replaced the broken keyboard (german) of my 1040ST with a US one, which I got for free. Now the ST doesn't know what's printed on the keys, and z and y swapped position and a number of other symbols changed place as well, No big deal. The only problem is the german keyboard has one extra key with the > and < symbols on it. So I can't get to type those now.
Now the stupid question: What's the way to let the ST know that I am using a US keyboard now?

Thanks a lot
Christian

>Any help would be gratefuly received.

Okay, I'm not sure what sort of system you are running the IRC client
on, but the problem is that the system thinks it is talking to a
terminal with 24 rows of text not the 25 that the Atari has. On a Unix
system, you
stty rows 25
before you run an IRC client (or anything else that uses termcap,
terminfo or curses to display text).

Cheers,
John

339. Re: Internet & GEM

Newsgroup: comp.sys.atari.st
Date: 1995-07-07 00:00:00 UTC
From: amsler@nevada.edu
Message-ID: <3tk2f7$ovf@news.nevada.edu>
Source record: 162686

Arno Welzel (aw@zaphot.augusta.de) wrote:
: Hello,

: I'm thinking about developing a kind of 'internet sockets' for GEM
: (similar to WinSockets for Windows etc.) wich will run without MiNT(!)
: and can be used on MagiC!3 too.

: Based this - finally some services should be integrated in the
: desktop 'Thing' - just some external modules wich provide simple
: internet access via modem by double-clicking some icons ;-).

: Maybe FTP may be used then in this way:

: 1. Login, open FTP service
: 2. Open an FTP-server - a new desktop window appears,
: containing the current FTP-directory
: 3. Drag&Drop icons from the FTP-window to a local
: directory window to get files from the server and
: vice versa

: Or another example:

: 1. Open the local 'mail' window - a window appears containing
: several folders 'incoming', 'outgoing' etc.
: 2. Open 'outgoing', then select 'new' - a dialog box appears
: asking for 'To:', 'Subject:' etc.
: 3. An empty mail file will be created and an application wich
: is able to edit text files will be started by the desktop
: 4. After exiting the editor, the mail file will be stored into
: 'outgoing'-directory ready to be sent
: 5. Double-click 'caller' icon to send/recieve mails/news via UUCP

: Maybe this is only illusion - maybe it is impossible to realize
: such things - so i have some questions:

: 1) Where can i find documentation about UUCP, SL/IP and PPP?
: 3) Where can i find sources to realize UUCP, SL/IP, PPP protocols?
: 2) Wich books should i read to get the technical background for
: a 'sockets' implementation, TCP/IP etc.?

: Ciao...

Well, to them I advise to buy a) a PC if they want an open system, to run
a Unix version, the stanard software, cheap expansions, etc.

b) a Mac if they can live with the basic system, inexpansible as Macs are.

Apple's kind of "litigation" is still well-known in rec.humor, they sued
anyone "copying" "their" look&feel, they only failed when it came to MS
Windows.

Hi,
Which version of Calamus are you using...1.09 or SL?
If you have SL then you can write your own printer driver using the
driver software with SL.

Steve Dent.

344. TAF DISK SET AVAILABLE AT HENSA

Newsgroup: comp.sys.atari.st
Date: 1995-07-07 00:00:00 UTC
From: efac001@alpha.qmw.ac.uk
Message-ID: <3tjrr7$gf4@epsilon.qmw.ac.uk>
Source record: 162691

Hi

The TAF installation disks for Chimera are now available at
HENSA. Paths at the end of the message.

Graphical web browsing is finally here on the Atari.

```
- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
MINT - X Windows - SLIP/PPP - Chimera - Telnet - FTP
Version 1.0 (BETA) 95/04/23
- - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
```

Requirements:
---
(1) 4M RAM
(2) 10M (Min) available SEPARATE Hard Disk Partition (other than your boot
partition)
(3) An Internet Service Provider with PPP - SLIP acceptable but
untested.
(3) Mono Graphics mode (ST High, Falcon, TT High)
(4) ST UNZIP Program, TOS/GEM based text-editor (recommend: VI.TTP)

Recommendations:
---
(1) 14.4 Modem - Appropriate Modem RTS/CTS patch
(2) A Boot manager (SuberBoot, XBoot, etc.)
(3) Recent version of ADHI. (Tested: 6.061)
(4) Knowledge of UNIX, VI editor: Not essential but useful.

720K Installation Disks

INSTALL.ZIP comes on the first disk in the TAF library (ie. disk #1) but
ends up needing to be copied to your boot partition. Since this is a
download version - you do not need a floppy for this file if you are
downloading directly to your hard disk. If you plan to put this in a
disk library of some sort, please include INSTALL.ZIP and this file
(README.1ST) on a floppy labelled Disk 1.

You will need 6 more floppies labelled Disks 2-7

The following files should be put on the floppies:

Disk 1 - INSTALL.ZIP ; INSTALL.TXT ; README.1ST
Disk 2 - 2a.tgz ; 2b.tgz
Disk 3 - 3.tgz
Disk 4 - 4a.tgz ; 4b.tgz
Disk 5 - 5.tgz

Disk 6 - 6.tgz
Disk 7 - 7a.tgz ; 7b.tgz

1.44M Installation

For the 1.44M setup you will need 3 floppies labelled Disks 1-3. If you
are making 1.44M distribution disks for a library please include this
file (README.1ST) on Disk 1.

The disks must be set up as follows:

Disk 1 - README.1ST ; INSTALL.TXT ; 2a.tgz ; 2b.tgz ; 3.tgz
Disk 2 - 4a.tgz ; 4b.tgz ; 5.tgz
Disk 3 - 6.tgz ; 7a.tgz ; 7b.tgz ; INSTALL.ZIP

After the disks have been set up correctly (this should already be the
case if you got them from a library) print the INSTALL.TXT file on
Disk 1 and read it very carefully before trying to start any installtion.
A complete set of intructions are included in that file.

If you can't find INSTALL.TXTon the disks, it is also included in the
INSTALL.ZIP file.

NOTE x-total.zip is a complete collection of the rest of the
NOTE files in this archive.

File sizes: 3711248, 215076, 329828, 592746, 505069, 155590, 484172,
550261, 254899, 155897, 20963, 441978, 3669

It's online as files

micros/atari/mint/a/a073/x-total.zip
micros/atari/mint/a/a073/2a.tgz
micros/atari/mint/a/a073/2b.tgz
micros/atari/mint/a/a073/3.tgz
micros/atari/mint/a/a073/4a.tgz
micros/atari/mint/a/a073/4b.tgz
micros/atari/mint/a/a073/5.tgz
micros/atari/mint/a/a073/6.tgz
micros/atari/mint/a/a073/7a.tgz
micros/atari/mint/a/a073/7b.tgz
micros/atari/mint/a/a073/install.txt
micros/atari/mint/a/a073/install.zip
micros/atari/mint/a/a073/readme.1st

Regards
Danny

Look at hensa, umich or ftp.cnam.fr and search for a package called
f030cd.*. Mostly it can be found in the falcon or the cd areas. It includes a
falcon compatible BOS driver for metados. And it also supports basic audio
commands. It works fine and it gives you - in my opinion -
enough features.

My favourite ST demos:

Synergy; The Synergy Megademo (Excellent music, some very nice screens, and
a very nice variation on Pac Man called Crapman! :-)
Wild Boys; Dreamzone
Oxygene; Calimer-O-Demo
Oxygene; Flip-O-Demo
Delta Force; Syntax Terror (Two games on this one, plus some nice screens)
Delta Force; Punish Your Machine
Aggression; Overdose
The Lost Boys; Oh Crikey, Wot A Scorcher! (Their final demo)
The Lost Boys; Mindbomb (An old classic)
NeXT; The Phaleon Gigademo (4 disks, 4 ways of selecting demos!)
Overlanders/ST-Conexion/Legacy; Froggies Over The Fence (very nice)
The Carebears; The Cuddly Demos (Another old classic)
1984; No Cooper (Some very nice plasmas in this)
Futur Minds; The Snork Demo

I have others, but these are probably the best of the lot.

From: fp270@fim.uni-erlangen.de
Message-ID: <3tmnd2Ff6o@uni-erlangen.de>
Source record: 162604

Hi everyone out there!
I've got a problem with my upgraded Mega2
When I've got the machine going for some time it quits showing
me four bombs on my screen. It's always four, exept for when I
retry immediately afterwards it's sometimes three.
Maybe anyone (I call you up, cracks, for I'm just a user and
not too deep in those elctronic matters) can tell me what devil
might have beset my invaluable machine?
Thanx that much.
Greetings to all hardcore-atarians!
ATARI for ever (hope so) !!!
Someday someone must come and develope a real fantastic system
and then get busted microsoft, intel and all PCs in generall!

349. VT100 www Browser via gnn.com?

Newsgroup: comp.sys.atari.st
Date: 1995-07-08 00:00:00 UTC
From: hicksm@hindmost.lpl.arizona.edu
Message-ID: <3tmqhf$cti@news.ccit.arizona.edu>
Source record: 162605

Hi Folks! Up until recently I have been using my trusty ol' 520 st to access various www sites using the vt100 emulation on uniterm and telnet to gnn.com from my account at work. No graphics of course but very handy none the less.

Well, it seems that gnn.com is not accepting the user name and password (gnnguest) as it used to. Does anyone know what the deal is or how I can find a solution to my st www browsing needs? Thanks loads!

-Michael

>Now the stupid question: What's the way to let the ST know that I am using a US
>keyboard now?

1) Replace the german TOS ROMs with US TOS ROMs
2) Use a program, wich changes the internal key tables (AFAIK there
are programs wich do this - but i don't know where to find this - sorry)

Good Luck!

I suppose that the game expects the old low- or mid-res color mode of the Ataris with 320*200 oder 640*200 pixels. These modes are currently not supported by MagiCMac. Perhaps in a later version...

--> topic is about porting an Amiga Mac Emulator to the ST/TT/Falcon.

My *guess* is that this is the Emplant, a fine emulator card that plugs into an Amiga slot. It runs Mac II ROMS, meaning color, but also meaning "support chips" (VIA's). Jim Drew was one of the guys who pulled this very cool hack off, at Utilities Unlimited. I did not know it was in shareware, but you can only keep up with so much (sigh).

Last I saw, Jim was working on PowerPC and emulating the '386 (I think) command set. There was a post somewhere about that, and an article in a magazine ... and as usual, my mind has rolled the information out to the swapfile on disk and I can't fetch it. Nuts.

Jim's a good man and the Emplant is really good.

Oh, there is also another Mac Plus (Mac I - 128K ROM) emulator from ReadySoft in Canada. Possibly it went shareware. That's by Simon Douglas. Maybe Simon "did" the Mac II ROMs; it's been a long time since I talked with him.

The present Mac Emulator for Atari is getting a face lift.
I am not done doing it, because of a particularly nasty bug (my own idiocy, to tell the truth), but it's a bootin' and runnin'. It does crash in places, but I have access to the onboard debugger now that it starts up, and can track down and kill the bugs. When I can't crash it any more it'll be testing time, then general release time; I won't dare to guess on timing. (Remember, version 3.0 took 18 Beta test tries, each of which had glitches.)

But not all videos/TV's can handle both 50Hz/60Hz, PAL/NTSC video signals properly. Most made since about '92 can. But only (usually) the more expensive ones older than that do. You get the occassional cheap model that has it thrown in for kicks, but these days even most of the el-cheapo TV's won't handle both. (Our brand new Toshiba 14 inch doesn't but the 21 inch does).

>
>

But... but ... but ... that ain't what happened!

(I *should* make up a Gadgets FAQ and post it.)

GBS had difficulties with a chip on the SST product from a
supplier. GBA was, after a really significant amount of time, able to
overcome these difficulties. Lawsuits sprung up both ways.

Jim Allen was a paid expert witness for the supplier. He did not
testify, and I'm nearly positive his report was not used at the trial.

We did not have any defective PCB problems! They were fine
quality. (How did THIS rumour get started? Maybe we need
comp.sys.atari.st.rumor.control).

Dave Small as in Dave of Gadgets did all this stuff, not Dave Small
personally. It's an important legal difference.

The trial was an experience, I'll tell you. It taught me a lot
about the legal system, and I think often that trials are used to send
people to jail .... I guess there is no perfect system. It would just
be sour grapes to babble about the proof we had, the case made, etc.
The fact is, the jury didn'
t vote for us.

Now, the *parts* probably could not have killed Gadgets, even
with the interest from the 2 years of delay the supplier asked for (and
got). However, the *legal bills* for the supplier were substantial. The
numbers Jim Allen gives, and that I saw, differ extremely. So I don't

know, but six digits. Gadgets had no way to pay that, and filed Ch. 7
in November of last year. 'twas the legal bills, folks.

Free Advice: Don't get sued.

More Free Advice: A bad settlement is better than a good trial.

Finally, the Mac Emulator software is owned by me personally,
not by Gadgets. (Spectre and so forth are trademarks of Gadgets; I do
not know their status.) In no way is the emulator dead; it's a spinning
at 3600 RPM downstairs (or whatever speed the HD's use these days).
I've babbled sufficiently about what I'm adding to my software for release,
and talked about the need for beta testing, and beta testers. Many, many
kind people have emailed me (and mailed) and offered to help.

The TT downstairs is starting up off the *SCSI* hard disk
(selectable). While it doesn't (yet) run System 7.1, I know *why* to the bit,
thanks to the Zax. I'd say the floppy-queue thingo in 6.0.5 was harder
to cure than 7.1 may be, but that's knock-on-wood stuff.

I hope this settles down the rumor control. "Got places to go,
and to have been..."

Me, I'm proud of the SST and its manual, and nearly everything
Gadgets did. (That's all written up in the last issue of Current Notes).

Now, if I can just live long enough to come up with a truly classy,
witty .signature line, I'll be in fine shape!

It was none other than Mark Leair who did write on 08 Jul 95 that ....
ML> Is there Diagnostic Software available for the 16/32 bit Atari
ML> computers (ST, STE, etc.) ???
ML>
ML> If so, could someone please tell me how to obtain it???
ML>
ML> I'm specifically interested in commercial software since I'm
ML> posting this for someone who does not have access to the net...it
ML> would be easier for him to order it via mail order...

Best Electronics in US do all sorts of Diagnostics hardware (ROM carts)
.plus maybe software if it is to test faulty Atari hardware.

If you just want something to give you info on your system status then
the most expansive would have to be Mark Baines Profile (Currently V2.14
IIRC) .. it aint commercial but sharware but he may be able to order it
direct from Mark which he may do MO (along with his book of Atari technical
things <bg>)
mail msbaines@cix.compulink.co.uk I guess.

361. The TAF WWW stuff

Newsgroup: comp.sys.atari.st
Date: 1995-07-08 00:00:00 UTC
From: azog@gti.gti.net
Message-ID: <3tnd8a$4uu@gti.gti.net>
Source record: 162617

Yesterday I downloaded the recently posted and much talked about
WWW package that TAF put together. From Hensa, I downloaded the complete
package, in one ZIP file, about 3.5mb. Even tho I have had MiNT
and X and all that other stuff running thru my own efforts, I wanted
to see what this was all about.

Some have complained about the fact that they paid $25 or whatever,
when it turns out all this stuff is freely distributable, and easily
had thru the net. The retorts to these complaints was that, sure,
it's freeware, the $25 is a disk copying fee.

In any event, if a person is clueless about all the stuff that is
involved, or just doesn't have the energy, this is a good way to
get going.

The ZIP file includes a bunch of gzipped tar archives, a couple of
text files, and another ZIP called INSTALL. Basically you create
a bunch of disks, unzip INSTALL to your root directory and reboot.
Following the instructions is pretty simple, and in about a half-hour
everything was installed. Rebooting MiNT gives me X and fvwm (a wonderful
window manager). Chimera works under X, and outside of the speed of
of the machine (a Falcon), everything worked fine.

I think this is an excellent effort to attempt to get a single
installation procedure, which gives people a rather painless entry
into the world of MiNT. There are some problems with the install
procedure (mainly as above, it messes up my root directory), but is
a far better cry than what was previously available. Of course, being
familiar with all the packages installed is always a good thing.
(you get MiNT, MiNTnet, MinixFS, and X; besides other stuff like a shell
and Chimera).

From: Vernon Seward <seward@magicnet.net>
Message-ID: <3tkvpc$8o6@comet.magicnet.net>
Source record: 162619

Yep, can you believe it? It's still here! With all of this software and other stuff and nobody has snapped it up. Well, here's the deal:

An Atari 1040 STE upgraded to 2mb (dealer upgrade)
An Atari 20mb shoebox external HD
A 3rd party (I forget the name) external 3.5" diskette drive
Atari color monitor
Mountains of software (including DTPs, Grpahics, and (of course) games)
Only the Library of Congress has more magazines (lots with diskettes)
Manuals, joysticks, and more.

All for the amazingly small price of $400.00.

All interested parties can note me.

Vern Seward

s> My 10c worth...

No, it's not even worth that much...

s> Price was far to hight for what it was....

was perhaps. But you can pick up a base 4meg machine for around 500 quid, maybe even less (certainly there is a booming 2nd hand Falcon market).

s> Software compatibilty was very poor...

Utter crap.

s> Need for 2 Colour monitors...

Ever heard of a Multi-Sync?

s> No Software support...

I would argue that ALL software released in the past year makes FULL use of the Falcon, especially the new GEM enhancements. It simply leaves the ST laying dead on the floor.

s> Too many BUGs and delays....

Delays? It's out isn't it? Its been out for years now.
Bugs? There are some, but blow TOS 4.04 onto your motherboard and stop moaning, most get fixed.

s> Hard Drive is to small..

????? 65meg is pretty crap agreed. So buy a SCSI... seeesh...

s> Unable to upgrade to a built in Hard Drive...

I'm sorry? Are you saying the IDE isn't in-built? Are you saying that you couldn't take it out and swap it for say a 1 Gig IDE? Perlease....

s> No The Falcon is a Dog, it only sold when Atari dumpt
s> them at dumpt prices....

The Falcon is the dogs bollocks.

Nuff said.

dHas anyone out there transformed their beloved ST into one of System Solutions Desktopper/Freekeys cases? From photographs, the result does seem to be rather nifty (especially with the floppy properly front mounted)!!

What about the optional extra's, 'PowerUp', internal fan, floppy kit, decent psu etc? Transferred your HD inside? Connected a PC style keyboard?

As a potential 'Desktopper' (!) it'd be great to hear your undying praise - or horror stories!?

Cheers!

Martin

P.S. What are the dimensions of the Desktopper case (esp. height)?

SARA (Search and Retrieval Atari) isn't just in beta-test, it's
now a commercial product! It's put out by ABC Solutions Software in
Toronto, and distributed in North America by It's All Relative;
16/32 Systems will be handling it for the UK.

Let's see, I should have the latest official blurb:

Have you seen SARA? LLLLLLLLLLLLLL
She's very small but LLLLLLLLLLLLL
she's got BIG IDEAS! LLLLLLLLLLLL
*** Hmmmmmm? LLLLLLLLLLL
No? *** LLLLLLLLLL
Well, if you haven't seen LLLLLLLLL
SARA, maybe you've seen LLLLLLLL
some of these popular DOS LLLLLLL
& Windows (shudder) CDs: LLLLLL

========== The Wayzata World Fact Book 1992?
========== Software Toolworks Reference Library v2.0.0?
========== Audubon's Mammals?
========== Audubon's Birds?
========== The Powerhouse Art History Encyclopedia?
========== Sherlock Holmes on Disc?
========== Shakespeare on Disc?
========== CD-ROM Deluxe Toolworks Reference Library?
========== 1992 Time Man of the Year?
========== 1993 Total Baseball?
========== 1994 Total Baseball?
========== The Family Doctor?
========== Grolier's Multimedia Encyclopedia v6?
========== Martin & Porter's Video Movie Guide?

DID YOU KNOW YOU CAN USE THESE BABIES ON YOUR ATARI COMPUTER
(with a CD-ROM drive of course)? No?

WELL YOU CAN . . . WITH SARA!!!!

'SEARCH AND RETRIEVAL ATARI'

.....and nothing on the Atari platform can touch it for
ease of access to information-based CDs

A - Finally a Reference Library on your
Desktop!
B - Finally a World Almanac on your
Desktop!
C - Finally the Classics on your
Desktop!
D - Finally an Encyclopedia on your
Desktop!

SARA is now available from a *lot* of ATARI DEALERS! Call your
favorite Dealer or Mail Order store to find out!

-O- If you've got ExtenDOS
-O- If you've got a CD-ROM drive
-O- If you've got an Atari computer
-O- If you've got a hard drive

.... then SARA is for you!

SARA programs replace the Search and Retrieval engines found on a
whole host of DOS/Windows CDs. Right now, Atari users can look at the
files on a rather large pile of Clipart, Image, Photo CD, Music and
Font CDs right from the GEM desktop . . . but when it comes to
looking at information on Multimedia CDs (Encyclopedias,
Factbooks, Movie Guides, Cookbooks, and many, many others), we're
all stuck. The main reasons of course, are that the file
structures cannot be read by TOS, or the information is coded into
huge data index files!

>>>>>>>>>>>>>>>>>> SARA solves the problem! <<<<<<<<<<<<<<<<<<

Different SARA programs access the following CDs:

SARA 5-Pack (5 SARAs on one disk!) ....$69 Cdn/$59 US
-O- The Software Toolworks Reference Library 1992 Edition
-O- The Wayzata World Factbook 1992 Edition
-O- 1992 Time Man of the Year
-O- The Powerhouse Art History Encyclopedia
-O- Parenting - Pre-natal to Pre-school
-O- Sherlock Holmes on Disc
-O- Shakespeare on Disc

-O- Audubon's Mammals
-O- Audubon's Birds
-O- 1994 Total Baseball
-O- 1993 Total Baseball
-O- The Family Doctor

SARA for Grolier Multimedia Encyclopedia ....$59 Cdn/$49 US
-O- Grolier's Version 6 Multimedia Encyclopedia

SARA for Video Movie Guide ....$49 Cdn/$39 US
-O- Martin & Porter's Video Movie Guide

coming soon ....

SARA for Better Homes & Gardens Cookbook,
Wine Guide,
Gardening Handbook!

oooooooooooooo SARA gives Atari users access to CD-ROM information
oooooooooooooo that was previously reserved for PC and MAC users -
oooooooooooooo WE'VE always had to look towards printed media for
the
oooooooooooooo same information . . . but no more! SARA lets us
read,
oooooooooooooo search, and otherwise access a whole new world of
oooooooooooooo information. And if you own a TT or a Falcon or
oooooooooooooo even an STe, accessing CDs like SARA Grolier's will
oooooooooooooo give you a genuine Multimedia experience - with
oooooooooooooo Sounds, Music, Graphics, Maps, Pictures, Portraits!!
oooooooooooooo The SARA 5-Pack along with the Software Toolworks
oooooooooooooo Reference Library, Wayzata & 1994 Total Baseball
oooooooooooooo CDs, are an education and entertainment
oooooooooooooo combination that is hard to beat on *ANY* platform!!
oooooooooooooo SARA for Video Movie Guide will entertain and
oooooooooooooo delight you for hours on end too . . . and still
oooooooooooooo remain an indispensible guide to movies on video
oooooooooooooo and TV!

|||||||| SARA programs are available (along with CDs!), from *ALL*
|||||||| fine Atari dealers - call your dealer now. If you're
|||||||| not sure where your nearest dealer is, and you want to
|||||||| join the CD revolution - call Greg or Randall Kopchak at
|||||||| IT'S ALL RELATIVE 314-831-9482 or Howard Carson at

```
====================================================================
For best results, SARA requires a TT or Falcon with 4 megabytes of
RAM and a hard drive, running in 640x480x16 color resolution.
Other combinations, including some graphics cards, also work
well. STe or better is required for sound. TOS revisions below
2.06, resolutions below ST High (640x400x2) and multi-tasking are
not specifically supported.
====================================================================
SARA is a Trademark of Proton Research. SARA *Copyright 1995 Peter
Zalesak, Howard E. Carson and Proton Research
====================================================================
```

And as for Microsoft Encarta - I'm afraid not, as it would turn out to be a bit too difficult.

I myself utilize SARA for the Groliers Encyclopedia - it's a great resource, and has cleared some confusion I've had about a number of topics. The Toolworks Library also makes a great reference. The Sherlock Holmes one is fascinating.

Dan (SARA beta tester)

The cheapest way to put a hard drive on your cpu is to either get a used Megafile here or buy a new/reconditioned one from Best Electronics. Brad at Best just bought a whole bunch of drives in the 20-60 meg range and he's selling them with warranty for $140-160 depending on size. His phone is 408-243-6950. Good luck!

I think this is a corking idea - if Apple don't object. There was
(back in the mists of time) a software only mac emulator in the PD
(I know, I had a copy) and Apple canned it 'coz it included a ROM image
of the Mac's OS in the release.

|> So there are now some questions:
|> 1) Is enought interest in the Atari community for such an emulator?

I would think so.

|> 2) Are there some programmers out, who have enought knowledge to do a port

That's not so certain, the few decent programmers on the Atari are all
pretty busy (from what I hear).

|> 3) what hardware should be supported
|> (I think, the emulator should run on the Falcon and TT and probably on the
|> Eagle and PAK 030-card; Nova-support would be fine, too)

Eagle,Medusa,Pak - all worthy, but hardly anyone has them. The old Emulator
ran on a plain ST with enough memory (1Meg I think, perhaps more). So, that
is what you should aim at, avoiding 68030 specifics if you can.

Craig.

: How were you able to copy a new boot sector onto the funky drive if the
: drive won't ID? If I could access the drive in the first place, I could
: try that. The cables are fine - that's the first thing I checked ;)

I used an old program from Start magazine called Partcopy. It can copy a
block of sectors of any size from any hard drive to any other hard drive.
And it uses SCSI ID and Logical Unit Number (LUN) for source and
destination drive so it works even when the drive won't ID.
So I told Partcopy to copy from SCSI 0, LUN 0 to SCSI 0, LUN 1, starting
at sector 0 to sector 0, length 1 sector. It worked for me, your mileage
may wary...
I think that Partcopy is at atari.archive.umich.edu, filename is
partcopy.lzh or partcopy.zip.

Hope this helps.

Hey Hutch...

There's a program that I use at work that runs under GEM for the PC. It's
a control program for video walls.

It's funny. The first time I ran the program I thought to myself, "Gee,
this looks just like my Atari." I then checked out the copyrights and
sure enough, Digital Research and GEM was a part of the copyright! I felt
like I was at home running that sucker!

> if it's good enough for you..?

Students, schools, business and the home market. The $999($3.00 for over night shipping) Performa 636 is a 33 mhz.-040, comes with cdrom, keyboard and lots of software. Plus its upgradeable to PowerPC. Does your Falcon have a future? Can you play Marathon and DarkForces?

No. But when I see inaccuracies posted about the Mac, than I will set the record straight. I never owned an ST, just Amigas. However, I own a Lynx, 7800 and 2600..

> quid, maybe even less (certainly there is a booming 2nd hand Falcon
> market).

500 quid, 4meg, no harddrive. No monitor? EXPENSIVE...
Booming 2nd hand market? Cant image why... ;)

> Utter crap.

Yep, software compatability was pretty good. With backwards quite a few ST games worked no problems and all GEM stuff works fine...
People even said the STE had poor compatability! I have only ever found about 1 games ever which doesnt work on an STE!

> s> Need for 2 Colour monitors...
>
> Ever heard of a Multi-Sync?

:)

> s> No Software support...
>
> I would argue that ALL software released in the past year makes FULL
> use of the Falcon, especially the new GEM enhancements. It simply
> leaves the ST laying dead on the floor.

Any other machine leaves the Falcon dead on the floor. EXCEPT in music, where admittedly it's quite good because of the general line in music gear from the ST onwards...

> s> Too many BUGs and delays....
>
> Delays? It's out isn't it? Its been out for years now.
> Bugs? There are some, but blow TOS 4.04 onto your motherboard and stop
> moaning, most get fixed.

It's been out for years... And how many people know about it? It's not exactly easily available or advertised *at all*... (although this has NOTHING to do with the machine...)

> s> Hard Drive is to small..
>
> ????? 65meg is pretty crap agreed. So buy a SCSI... seeesh...

Expensive, buy an IDE!

> s> Unable to upgrade to a built in Hard Drive...
>
> I'm sorry? Are you saying the IDE isn't in-built? Are you saying that
> you couldn't take it out and swap it for say a 1 Gig IDE? Perlease....

This bloke obvoisly didn't know the falcon has an internal 2.5" IDE hard drive bay! :)

> s> No The Falcon is a Dog, it only sold when Atari dumpt
> s> them at dumpt prices....
>
> The Falcon is the dogs bollocks.

Falcon is OK. Overpriced i think, but that's my oppinion.

Morning!

[totally off-topic, sorry]

A good friend of mine is getting 21 in a few days, and I don't want to send her a standard type greeting card, so here's the question:

In _YOUR_ home country (and/or in the country you currently live in), what duties and rights are added to you at this age?

All normal things, and especially wierd things, are welcome. If there's any, please include district/town specific stuff, too.

Please, everybody who reads this, send me e-Mail including the duty/right and the country/district/town it belongs to.

I intend to do a card like the following example:

So, you're 21 now. So what?

Well...

In Germany, you may now drive trucks and become Bundeskanzler.

Two words - EXTENDOS PRO.

Really. This is a wonderful driver program that DOESN'T require you to use
MiNT, and works wonderfully on a Falcon.

First thing - don't write to the disc again until you have done the recovery! You have.....then read no further as the freed sectors will have been overwritten. You haven't....good, there are loads of disc utilities which will do the job - the easiest to find PD is probably Atari's own CHKDSK.

Sounds like a temperature induced bad connection. You could try looking inside and pressing home all mechanical connections (plug/socket, socketed chips etc.) While you are there go over it with the suction tube from a vacuum cleaner as, if you have had the Mega lying around for some time, there may be particles of dust etc. causing short circuits.

Well, this stuff was suposed to have been sold. I had several offers, one was about $130 (second was $100), but the guy (David J. Chow) was really flaky (promised to send money twice - even said he sent it) and it never showed up...

So anyway, this stuff needs to go. You can probably piece out the items to local ST users for more than you'll pay for the whole bundle, I just don't have the time to mess with it, so... The highest offer by next Friday takes it. Bidding starts at $40. Go for it.

P.S.: It also includes a FREE 520/1040 ST Clear Plexiglass Stand (very nice and worth at least $25 itself).

411. Final ST Hardware sale

Newsgroup: comp.sys.atari.st
Date: 1995-07-09 00:00:00 UTC
From: steele@wolfe.net
Message-ID: <3to2oj$fpt@news1.wolfe.net>
Source record: 162638

This stuff also needs to go by Friday. Make an offer for any items,
or for all of it...

Title	Maker	Price
20 Disk Holder		$9.00
3.5" Disk Drive Case & PS		$24.00
30 Disk Holder	Disk Bank	$9.00
9 to 25 pin Changer		$3.00
Cable: TT to Image Systems monitor		$5.00
Digisound	Alpha Systems	$19.00
Electronic Printer Switcher	Bothway	$39.00
Joystick	Atari	$8.00
Link (Limited Edition: Clear Case)	ICD	$89.00
Macintosh 128K ROMs	Apple	$99.00
Microline 82A Printer	OKI	$25.00
Power Players joystick	Mindscape	$6.00
ProModem 1200	Prometheus	$9.00
ScanTrac (for handheld scanner)	ScanTrac	$17.00
ST Floppy Drive Cable	Atari	$3.00
Trackball	Atari	$15.00
White Metal Monitor Holder	Rabami (Danish)	$79.00
Xtra-RAM MMU Adapter	Marpet	$2.00

PS: The Xtra-RAM adapter is NOT a memory upgrade board, it's just an
adaptor for soldered on MMU's (if you're going to use an Xtra-RAM

upgrade).

412. ST CD-ROM for sale

Newsgroup: comp.sys.atari.st
Date: 1995-07-09 00:00:00 UTC
From: steele@wolfe.net
Message-ID: <3to2sd$fpt@news1.wolfe.net>
Source record: 162639

```
Atari ST CD-ROM
---------------
CD-ROM for sale -- only one available, a master copy -- that was going to be
used commercially but the ST market crapped out. It cost about $350 to produce,
will sell for $100 or best offer. Includes the best PD that was ever released
for the ST (over 480 megabytes worth).
```

413. Latest ICD utils: where?

Get hold of CHKDISK3 its a Atari products and I find very good, its on most
sites..

But it will only work if you HD is not framented, ie, the parts of the file
have to be on consecutive sectors and not broken up on other sectors...

The reason for this is after a file is deleted the directory entry is marked
could sort so that yoy can't see it, but all the FAT tables of that file are
removed, only the start sector that is pointed in the director is left..

But this all depends that you have not writen any thing at all to that
Partition since you erased that file...

422. OUTNEWS.TXT

Newsgroup: comp.sys.atari.st
Date: 1995-07-09 00:00:00 UTC
From: john@whalley.demon.co.uk
Message-ID: <805310042_OASIS_@whalley.demon.co.uk>
Source record: 162649

I'm currently using NOS 0.42 and Oasis 1.12, and have recently noticed that my outgoing news messages aren't being added to OUTNEWS.TXT like they used to be. This seems to have happened since I switched to NOS 0.42 from 0.41. I'm assuming that this is a problem with NOS rather than Oasis. Anyone else had this problem, and is there a solution?

TIA,
John

One of the better terminal programs I used a lot was Rufus. You should find it at most good net shops.
I have been out of Atari for some time now... Sorry
Flash was not too good at vt100, only vt52
Uniterm was (is) excellent, and has the graphical (tektronix) emulation, but handling is a little bit ackward...

Robert

424. New HD for Megafile 30

Newsgroup: comp.sys.atari.st
Date: 1995-07-09 00:00:00 UTC

Message-ID: <1995Jul9.173024.21380@news.csuohio.edu>
Source record: 162651

The Seagate st257? whatever that was in my megafile died a sad death :(.
I have a 20 meg Seagete MFM drive laying around, but it will not format.
I am using ICD formatting software (the one that works with all controllers).
Any ideas? Any suggestions? Mabe another drive that will work with the
controller? The 30 meg drives seem to be pretty rare....

By any chance is there a FAQ or tech sheet om the Megafile 30 available?

Thanks in advance

425. STE memory upgrades

Newsgroup: comp.sys.atari.st
Date: 1995-07-10 00:00:00 UTC
From: colin@cogsci.ed.ac.uk
Message-ID: <DBI965.GEv@cogsci.ed.ac.uk>
Source record: 162502

I'd really appreciate it if someone could straighten this out for me. I've got a couple of 1M chips to replace two of the four 0.25M versions currently in my ST. I understood there was a software fix around which allows the 2 1Ms plus 2 of the 0.25Ms to be used together, but my supplier told me that only works on the STFM. Does anyone know the truth of this? And if the 2.5M total is possible with the fix, any ideas where I can get the software?

Please reply by email - I'll post a definitive statement if and when I get it.

Colin

I have a friend in the San Francisco, California area who is
in a real bind.

He desperately needs to translate some disks created on an
Atari 520ST in a word processing program called FirstWord
into MAC or IBM PC format.

His publisher refuses to go forward with the book project
if his staff has to rekey the text.

Can anyone help me to help him?

Please reply directly via e-mail, if you have any suggestions:

RickShar@ix.netcom.com

Thanks,

Rick Sharp

Hello

I've installed X and Chimera from the TAF disks but I'm having problems connecting to my provider, Demon. I think I have my chatfile set up okay because I can see what's happening with the syslog and my login and password is entered okay and I get a message telling me my IP address which normally happens when I log on with NOS. After a few seconds of doing nothing my modem drops carrier and I get the following lines :

```
pid 28[chat]: BUS ERROR: User PC=37B222 (basepage=3767A0, text=3768A0, data=3)
Bus error
Jul 10 16:23:54 homer pppd[26]: could not set up connection
Jul 10 16:23:54 homer pppd[26]: exit
```

does anybody know why this is happening, I'm looking forward to using Chimera, it look great.

Cheers.

chkdsk3 from Atari will undelete, as will Diamond Edge, Zorg, just about any
hard drive utility. if you can ftp, look into atari.archive.umich.edu or
archive.wustl.edu, under /pub/atari/diskutil...
of course, you must make sure that you DO NOT write to your hard drive at all,
or you will be in danger of overwriting that file you want to undelete.
download and decompress to a floppy.

Do you want to mend the printer or get a new one?? You don't say what your friend's requirements are but, assuming minimal, you can pick up working second hand dot matrix printers for £10-£40.

: now I have only a dial-up shell account. Thanks ahead,

It's SLIP based, AFAIK, so you would need a SLIP setup. It requires
640x400 minimum (an X-Windows requirement) and runs under the MiNT
operating system, which it comes will. You will need a completely blank
partition due to the MiNTfs (file system) formatted to perhaps 16 megs or
more. There should be no TOS incompatibilities.

^^^^^^^^^^^^^^^^^^^^

Er... while I won't dispute the fact that the garden variety peecee is
a more open system than most Macs, it's far from truth to give the
impression that the Macintosh (especially modern ones) is not easily
expandable (I suppose that's what you meant by 'inexpansible.')

All newer Macs are easy to get into, generally without the need of any
tools, and include expansion slots (soon to be PCI) for video cards,
framegrabbers, accelerators, A/V cards, etc. SIMM memory, hard disks,
floppy drives, CD-ROMs or other internal devices snap in and out.

The best thing, perhaps, is that by and large, with a Mac you just
plug something in and turn it on and it works. An amazing concept that
PC manufacturers just haven't got the hang of yet. No messing with IRQ
channel selection switches, config.sys, autoexec.bat or win.ini files.

Ease-of-use (setup, operation & maintenance) is one thing that
distinguished the Atari ST from the PC years ago. Macs are much the same.

But please. Whatever you do, do NOT confuse me with Peter Sinclair! :)
I still love my Atari machines, too, ya know?

441. Chimera help please.

Newsgroup: comp.sys.atari.st
Date: 1995-07-10 00:00:00 UTC
From: smoore@chowgar.demon.co.uk
Message-ID: <805415000_OASIS_@chowgar.demon.co.uk>
Source record: 162518

Hello there

Right, I've finally got Chimera working with the TAF disk set and have sorted out the problems I was having with connecting to my provider but I'm now having problems with Chimera itself.

The major problem is sometimes, for no apparent reason, Chimera will close itself and I have to re-open it - which means that whatever web site I was at is gone and I'm back at the TAF home page. This happens seemingly at random. At first I thought it was because I was connecting to obscure sites but it has even happened when I tried to go back to the default home page so that can't be it.

Sometimes I get the message - no such file or directory (or pid) when I select one of the menu items from x-windows.

I also sometimes get out of memory messages, I remember seeing a thread about this, was there ever a conclusion to this or is 4 meg cutting it a bit fine?

Another quite serious problem is that I can't enter the ~ symbol, I suppose there is quite an easy solution to this but I can't think what it is.

My other points aren't really problems, just questions.

Is there a screen resolution enhancer I can use on my Falcon
that I can use with X, blow-up won't increase the resolution
in 2 colour mode on my monitor, is there anything else that
will, preferably PD or shareware?

Where can I find documentation for x-windows, Chimera, and vi?

If anybody can help me with any of this I'd be very grateful.

Regards.

Your psychology is showing through again Roger.

Before I came onto the Internet I had heard from a number of people about this complainer and moaner in the Atari Newsgroups. You certainly live up to your reputation! But I also notice from the replies that people give to you and the contact I have with some of them, that they think you're just a bit of a laugh. Now this is absolute proof and factual information that you should grow up. You've got a real problem. People respect you for your knowledge, but not for your obvious bitterness. I think I would echo other people's thinking about your contribution to this area by saying for instance something like, "Wouldn't you be more happy in 'alt.complainer' or 'alt.lost.in.life' or 'alt.someone.please.listen.to.me'!" I'm sure that Atari people in general in these newsgroups will be quite happy to confer upon you the appropriate honorary degree in you know what.

With respect, please find the newsgroup that suits your obvious interest, this doesn't seem to be it.

Good luck, Roger :-) Our club continues to grow. You're welcome to join, if you think you can make a positive contribution.

Thank you for the kind words. I also thought that came out decent,
especially if you knew how little time I spent on coding it. I've been
considering a new and improved version of it....

As for Scramble I thought of doing one a while back on the ST platforms,
but the scrolling routines I had at the time really didn't let me code
a nice smooth pixel by pixel scroll without taking up ALOT of CPU time.
However this is still a small chance I could do this game on the STe/Falcon
platforms?

Yah, I'm still very much a NEWBIE in the Internet.....:)

Look for an Aminet mirror. Within the MOD directory there will be a
directory dedicated to 8 track Octalyser modules.

Does DLII work on the Falcon? It allows you to change every possable file
attribute there is, including the "hidden" attribute.

Hmmm, think I'll keep with what I've got until I know what the heck I'm doing. :) Any disadvantages to c68? (other than more memory...)

> whose name completely escapes me.

I really don't want to use a memory hog like bash, I'm not running a MiNT setup so I have no need for background proccess support, pipes, etc... I'm currently using Teeny-Shell by David Parsons, its a nice little shell based on the Unix "sh" and "ksh" shells, although it has a small quirk with handeling the PATH enviroment variable, according to the manual, if it is defined, it won't check the current directory unless you put a null pathname in the PATH variable, this didn't work, so I ended up putting a ".\" path in my PATH variable and it worked...

> > What is a good text editor for editing C code?

Don't bother trying to write Falcon-Enhanced programs with GFA, I dunno
much about HiSoft, but it is probavly better for writing Falcon programs,
you should probably dump Basic and get yourself a nice C compiler...

No, Diamond Format is PD, its Diamond Back and Diamond Edge that is
commercial, DF is a standalone PD version of the disk formatter built into
DB.

> You're hard put to find a PC that will read ST-formatted 10 sector disks
> or ones with skewed/twisted sector format. The vast majority will

You can fool with the CONFIG.SYS file to make a PC read extended-format
disks, but then you can no longer read standard format disks without
changing it back. Twister disks are another can of beans...

Apple sued DR for copying the "look and feel" of the Mac, so the PC
version of GEM was greatly crippled to look less like the Mac, but the
Atari version of GEM was never changed... :)

471. FS: Atari 1040/Notator MIDI Sequencing System

Newsgroup: comp.sys.atari.st
Date: 1995-07-10 00:00:00 UTC
From: bmaraldo@io.org
Message-ID: <3tqg56$a9m@ionews.io.org>
Source record: 162572
Cross-posted to: tor.forsale,ont.forsale,kw.forsale,rec.music.makers.synth,comp.sys.atari.st

I have a nice Atari 1040st system with a high res monitor and full copy of CLAB Notator 3.2 forsale. The atari comes with 1M of ram which is plenty for music sequencing. The monitor is the 124. The software comes complete with original new manual, key, disks and binder. Notator allows you to do sophisticated multi-tasking sequencing and music notation. Asking $500CAN ($370US).

> (This is with/without GDOS and with/without alternative system font(s).)
I guess you are talking about Thing here: This is a problem of Geneva, its
appl_getinfo call doesn't work properly if you want to get the size of the
standard-system-font. The Geneva-AES has some other little problems which
also may cause Thing not to work properly, but Arno doesn't want to write
workarounds for that. AFAIK the next version of Geneva will have all that
problems fixed, but I don't know if and when it will be available.

Ciao

475. 5.25" DSDD Floppy drive FS cheap!

Newsgroup: comp.sys.atari.st
Date: 1995-07-10 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <RhMgIcG.johnhechtman@delphi.com>
Source record: 162576

Title says most of it (grin). I have a 5.25" DSDD GT-1000 floppy drive
for sale. I used it to access old-style DOS disks, but now that I have
a Spectre Mac emulator, I need my B drive slot for other things (grin).
The GT drive is in perfect condition and comes with original box/docs/etc.
I'll take $50 or best offer. Shipping via UPS/COD only, I'll haggle about
the shipping cost ;)

476. Need Spectre 3.0 docs!

Newsgroup: comp.sys.atari.st
Date: 1995-07-10 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <ZBEgYQF.johnhechtman@delphi.com>
Source record: 162577

I recently bought a Spectre 3.0 cartridge and software from Steve Cohen (of Wizztronics fame). I got the dongle and software but no docs or manual because Steve didn't have one. This leaves me a bit in the dark about how to use it (grin).

Could some kind Spectre owner send me a xerox of the manual? Since I legally bought the box and software, I don't think anyone can accuse me of practicing piracy by asking for instructions on how to use it! I'll gladly pay xeroxing and postage costs. Or send me an ASCII file to tell me how to use this bugger! Any special tips and tricks on using Spectre are greatly appreciated. Thanks in advance to all who respond!

>on the PC with my MQX-32M dual port midi card and Cubase.

The stock ST can have multiple MIDI ports with the aid of 3rd party dongles such as Cubase/Emagic Unitor II. With some modification you can even use the Cubase dongle in the Unitor. There are also other 3rd party devices. Look in the Toad catalog for a compatibility list with the software you run.

I have never had need to output MIDI clock by itself, as we sync to SMPTE via a Unitor II which works flawlessly! However, it seems to me you could do that with your sequencer software and just send the clock (click) to a 2nd MIDI port.

478. Mac-Emulator for Atari

Newsgroup: comp.sys.atari.st

Thanks a lot for the feedback. There is now a coder (and I think he is well known in comp.sys.atari.st), who thinks about porting the Amiga-version to the Atari.
Bye the way, the Emulator is called "Shapeshifter", and if you want to find out more about it (there is even a list of compatible software), try

http://www.uni-mainz.de/~bauec002/

Thats the www-page for the Amiga-version.

No , its not Emplant. It is a new emulator from Germany, the Shapeshifter.
Bye the way, I got a lot of feedback, and even one programmer thinks now about
porting the Shapeshifter on the Atari. He will talk to the coder of the
Amiga-version, and then decide, what to do.

So lets hope, that we will see it happen soon!!

I'm afraid this particular horse has well and truly bolted.

Perhaps the next issue of AW should have something like "unhindered by
generally accepted standards of good taste and decency" on the cover.
Failing that, you could stick the GIF in question on the Reader Disk. (:

482. MiNTnet help

Newsgroup: comp.sys.atari.st
Date: 1995-07-10 00:00:00 UTC
From: smoore@chowgar.demon.co.uk
Message-ID: <805339624_OASIS_@chowgar.demon.co.uk>
Source record: 162583

Hello

I have just set up the Chimera distribution from TAF (thanks TAF) which I downloaded from HENSA (thanks Danny) and everything is set up fine. Actually I couldn't believe how easy and trouble free the whole thing was to install, quite a pleasant surprise. The only problem I'm having is in setting up my chatfile in /usr/ucb. I can get it to dial no problem but from there I end up in a right mess. The script I have been using to connect to Demon with NOS is as follows :

```
configure:
init "ATZ\r"
dial_cmd "ATDT"
ld_code "132"
number "0121 275 4848\r"
number "01902464848\r"
retries 999
#
execute:
init
cwait 10000 "OK"
dial
cwait 45000 "CONNECT" "BUSY" "NO CARRIER"
cwait 20000 "gin:" "NO CARRIER"
wait 1000
send "chowgar\r"
wait 60000 "word:"
wait 1000
send "password\r"
wait 60000 "ocol:"
wait 1000
send "ppp mru=1500 idle=300\r"
wait 60000 "HELLO"
```

and my chatfile is as follows :

```
ABORT 'NO DIALTONE' ABORT 'NO CARRIER' ABORT BUSY ""
at OK atdt01212754848 CONNECT "" gin:--gin:--gin: chowgar
word: dimarzio
ocol: ppp mru=1500 idle=300
HELLO :
```

(the first 2 lines are usually joined together, I've seperated them here so they would fit on an 80 column display)

I think I've got the gist of it but I have a feeling that the problem is in not having the pauses in there between sending each response. The system log isn't a great deal of help as I don't really understand what's going on, just a load of lines with unable to connect (or something) at the bottom.

I've changed to modem2 as I'm using a Falcon so that can't be it.

I've altered resolv.conf to reflect my personal settings and think that I've done it right, if my full address is smoore@chowgar.demon.co.uk is my domain name chowgar.demon.co.uk or demon.co.uk? Maybe that has something to do with it.

Has anybody got any idea's as I'm desperate to give Chimera a try, it seems a really nice piece or work, just what I've been waiting for.

Thanks in advance.

Atari Falcon030 with 4 Meg ram & 84 Meg HD.

Includes all the S/W that came with US Falcons
(Atari Works, D2D, AFM, etc.), VGA adaptor plug,
SC1224 adaptor plug, complete HiSoft BASIC 2
package (version before they added specific
Falcon support, but it does work fine as is),
and various other S/W downloaded from the Net.

I'll include a SCSI 2 cable for hook-up to
external SCSI devices.

Approx. 2 years old, in perfect condition.

Asking $800.00 USD including shipping.

I live in Richardson, Texas (north of Dallas).

Send mail to R.HOEKSTRA1@genie.geis.com

RandyH

1. I have the same problem with Chimera on a MegaST4, i.e. crashes on pages with big GIFs. I'm going to try it out on my F030 with virtual memory tonight.

2. I found the TAF package on Compuserve: recently I've seen it on a European ftp site, either ftp.cnam.fr or ftp.cs.tu-berlin-de, not sure which now. It's probably on micros.hensa.ac.uk by now, but continental users will need to get up early (like, 0600 CEST is a good bet).

Actually quite a few seem to find (and offer) mutual support in the Atari Forum(s) on Compuserve, and SFAIK there's an even bigger Atarian community on Genie.

Hottest topic on ATARIPRO lately seems to be "[how] can I connect my ST to the internet?" :)

* URGENT! - SUPPORT RE:PORT

THE RE:PORT MAGAZINE STILL EXISTS !
It is the only paper magazine for Portfolio in English
that has survived. 17 issues has been published.

Here is what the publisher DAVE STEWARD has sent us:

I am offering back issues for US $10 (US funds only!) each.
Here is the
information, which you may feel free to pass on to others.
I hope your
Portfolio club goes on for a long time!

Any of these issues can be had for US $10 each (check or
money order only)
from:

Re:Port
c/o David Stewart
1504 Winterset Parkway
Marietta, GA 30067

Each issue comes with a 3.5" IBM DD disk, which can be read by the Atari ST computers as well as Macintosh computers with SmartDrives (and of course by any IBM-PC compatible computer).

Just indicate the volume/issue numbers that you want. Please allow four to six weeks for shipping.

If you have any questions about the issues or programs that you'd like, please send email to 73770,2021 on CompuServe or DAVESTEW@NETCOM.COM on the Internet.

NOTE: Please place your order as soon as possible! Re:Port is stopping publication soon. This offer may not last!

Please SUPPORT DAVE STEWARD - he needs encouragement and encouragement!!!

- send him e-mail and subscribe to this magazine
- the Re:port is a unigue source of programs for Portfolio
- send him texts and files to be published

****
THE RE:PORT INDEX

Here is the list (index) of the issues published:

Volume 1, Issue 1

Article: Welcome to Re:Port
Gleason on PBasic (PBASIC)
>From the Editor: 60View instructions (60VIEW)
Editorial: Non-disclosure policy slows Port development
DOS Tips
Backup and restore C: drive with batch files (BACKUP.BAT, RESTORE.BAT)
Editor: Macro puts text in date, documents (MACRO)
Worksheet: Checkbook balancing (CHECK.WKS)
Address Book: Using the Port as a study partner
Industry News

Volume 1, Issue 2

Spell checker (SPLCHK)
Stupid Port Tricks: Worksheet games (DICE.WKS)
Quick Tip: Battery watching
Industry News: HyperList, music program, RAM card replacement cases
Gleason on PBasic (PBASIC 4.9)
PBasic vs. PowerBASIC
Online Services (Complete text listings of CompuServe
and GEnie library areas. Since then, we have
published only bimonthly additions)
Backup/restore (BR)
Book Review: Abacus Port guide
Bug RePort: Macro update (MACRO)
Tip on hiding files
Mailbox

Volume 1, Issue 3

Program Reviews: Finance, Terminator 2 File Manager, PowerBASIC,
Business Contacts and Information Manager
Editor: Getting .HOO files to work
Industry news: Port memory, Util compiler, shareware disks
Checkbook program with link to Quicken (CHECK)
Settings program (SETTINGS)
Piano program (PIANO)
Gleason on PBasic
Online Services (LISTINGS, BANNER, CGASHOW, CODE, DIAL, ESHOW, LAUNCH,
MAC, MUTE, PGCUNIT, SCRMODE, SECURE, TRIG)
Ordering information
Mailbox (UPDATE.COM, ANSI.SYS)

Volume 1, Issue 4

Updated Launch program (LAUNCH)
Industry News: 512K cards, APB book, graphics service
Gleason on PBasic
Worksheet tip
Review: Instant Speller
Battery monitor program (BAT)
Jeopardy helper program (JEO)
Beginner's column: Dropping File Manager
Online Services (LISTINGS)
Advanced column: Graphics
Looking ahead: Port in space
DOS to Port: Adventure games
Services: Fast shipping, custom programming

Volume 1, Issue 5

Worksheet: Plot graphics (SEEWORK)
Port uses: Police work
Industry News: Hard drives, carrying cases, European software
Review: HyperList
Gleason on PBasic (PREAD)
Graphics programs (PDRAW, PGCVIEW, ANIMATIONS)
Solitaire game (SOL)
Beginner's column: Getting files from the desktop to your Port
Port problems: How to install a PC Card Drive
Quick tip: Faxing
Advanced programming: Graphics routines in Turbo Pascal
User-to-User: Get things done

Volume 1, Issue 6

Communications (PORTCOM)
>From the Editor: Moving to Iowa
Industry News: Port demo, movie star, RAM cards
Gleason on PBasic

Pacman-like game (PORTMAN)
Windows graphics on the Port (WINPGC)
Editor/Diary: To-do program (TODO)
Voice synthesis (HELP, BIRTHDAY)
Best sellers
Beginner's column: Tips!
Communications routines
Online services (LISTINGS)

Volume 2, Issue 1

News on 1/2/4 meg cards
Industry News: Carrying case, more sound, British newsletter
PowerBASIC column
Snake game (SNAKE)
Bug RePort (TODO)
Editor: Delete utility (DELETE.HOO)
Review: DOS Utilities Card (feature complete list of card contents)
More on editor hooks
How to write hooks
Online services (LISTINGS)

Volume 2, Issue 2

Universal Interface announced
Back issue list
1/2/4 meg cards unavailable
PBASIC memory
Terminal+ review
Copy protection
Custom alarms
Simon game
60Hook
Resize C: drive
Double disk space
DOS help
TSR programming

Volume 2, Issue 3

Universal Interface review
1993 Port Tips
524K FlashCards
Screen fader
Address Book
Concentration game
Custom alarms
Error messages
Special Port ports

Volume 2, Issue 4

FlashCards available
Lynx available
CD-ROM
New PBASIC
Grocery shopper
Skiing game
DOS programs
Dealing with archives
Input controls

Volume 2, Issue 5

PBASE review
Move to Atlanta
Atari & IBM
Reading .WKS files in PBASIC
SuperPrint utility
Peg game
Memory and storage space
Online help
Making hook files work

Volume 2, Issue 6

Optrol delivers 1, 2, 4 megs cards
Review of Autobyte TimerKeeper ROM card
BSE drops Universal Interface
Atari release Jaguar game system
Minefield game
Program to adding quick meetings to diary file
Updated WINPGC program
Beginners: Understanding disk drives
Advanced: The .DRY file format
Mailbox

Volume 3, Issue 1

Port upgrade guide
CONFIG.SYS configuration can save memory
Port CD-ROM available
TIPI programming language
Punk Jr. game
FIND program seeks our Port files
Review of desktop versions of Port programs
Beginners: Battery usage
Advanced: Scrolling on the Port screen
Mailbox

Volume 3, Issue 2

How to find Port info on the Internet
Optrol drops 524K card
FILTER program organizes address books
HEADACHE solitaire game
Beginners: Using the Port online
Advanced: The .ADR file format
Mailbox

Volume 3, Issue 3

The Perfect Palmtop
ZModem on the Port
WIPEINFO ensures deleted data stays gone
POKER game deals fun
Beginners: Year-end Port tips
Advanced: Object-oriented Port library?

Volume 3, Issue 4

Re:Port announces that it is stopping publication
Bon Voyage to PBASIC creator BJ Gleason
ADR utility finds any name in any .ADR file fast
CRYPTO game offers hours of puzzling fun
Re:Port reader takes you on his travels
Review of World Clock program

Volume 3, Issue 5

Re:Port's last issue, not yet to press
Should be available by Aug. 1, 1995.

* HOW TO GET IN TOUCH WITH PF USERS

Many of the PF users will never get in touch with Internet.
And if they do, search engines for WWW and NET usually produce
no information about Portfolio.

We can help PF users in the outer world (and we are obliged
to do so, they are our computer friends). Experience shows
that they are glad if they learn that PF has not died.

Here are three tips how to help other PF users:

1. where to find them
2. what to offer them
3. run a local club

1. Where to find PF users (in your country):

* read private advertisements in PC magazines. You can find people selling PF. Try to touch them. They will be surprised and they usually say that they would not sell PF it there were more new things. There are new things but they do not know about them. And will not know UNLESS YOU TELL THEM.

* read private advertisements in city FREE-AD newspapers. There are usually columns for computers and people can place an AD for PF here for nothing (those who sell PF usually do not want to spend any extra many).

* in many countries there are strong groups of Atari ST users. Often ATARI ST users have Portfolio. Get in touch with them.

* dealers - some dealers of Atari stuff have addresses of people who bought things from them.

* if you want - place your own advertisement in PC magazine, or FREE-AD newspaper. (Well, it proved not to be too efficient)

2. What to offer to a newly found PF user

* Prepare a diskette with some files that you yourself use and add things from internet or other sources. You can offer such a diskette for some price (5 USD or so).

* Write some short summary of what is available for Portfolio. And there are many things. (E.g. print this issue of Portfolio News on your printer and distribute it.)

* Inform the PF users that there is RE:PORT magazine and Portfolio News (you are just reading) available and that you can get him a copy. (again you can ask for some money)

What is available for Portfolio - a brief list
(information for any PF fans especially outside the internet)

- new Portfolios still sold
- many countries (many old dealers) still support Portfolio
- parallel, serial inteface avaialble
- parallel intefaces, RAM cards are produced by our Portfolio club
- FDD 1.44 MB unit for Portfolio (completely new product for all PF users)
- 1 MB RAM cards still sold (only a few PF users outside the USA know about the 1 MB RAM cards)
- Re:port Magazine still published
- Portfolio News published in Czech on paper and in English on the net
- old soft and new soft

****
* History of Portfolio club in CZ (Czech Republic)
(written by JS)

First Portfolios arrived in CZ in 1989. There were some activities at that time, something like a club, but everybody relied on Atari dealers. In 1993 the Atari died in Europe and so did the dealers in CZ.

Many (cca 3000) Portfolios have been sold in CZ since 1989. The greatest problem was the national version of Portfolio. Atari dealers told everybody that it was not possible to make PF "speak" Czech unless chips inside PF were changed. This "operation" increased the price of PF by 1/3.

I bought a second hand PF in fall 1993. Soon I learned that without PC or a RAM card my data were always lost. Then, in Jan 1994, I finally saved some money and bought a RAM Card. I happened to get a diskette with BJ Gleasons PBASIC 4.91 and I learned it is possible to work in graphics with a speed of up to 20 screens per second.

This gave me the idea that national version can be achieved. I wrote a simple text editor running in graphics using PBASIC. And it worked. I became sure that if somebody wrote the same in assembler it would be as fast as the text mode. I looked for someone to do this job. I did not find anybody so I wrote an assembler editor (called Czech editor) by myself.

But later I found two brothers (Martin and Milan Hrdlicka) who were making soft for Portfolio and they completed resident driver for screen and keyboard.

So the first goal - national version has been achieved. We started to sell the Czech editor and the national version. Thus we got in touch with other PF users. We saw the need to produce hardware - so we started - RAM Cards, parallel interfaces, FDD unit, PortWalk and software.

****
Atari Portfolio on the Net and in different countries

Here is a list of some places that have Portfolio information. Please check them out and send us back your findings. Or compile list of things really available.

UNITED KINGDOM:

Atari Web Pages Latest News
Version 1.0 Date 6/6/95
by Mark Stephen Smith

Hello and welcome to the news item on the Atari Web pages.
This document
will describe the Atari Web pages as provided by Mark
Stephen Smith and will
inlcude a list of the latest updates for the month. Each
month I hope to update
this text with the very latest additions and news on the
Atari Web pages.

Hopefully these pages will provide an invaluable service to
their users, but
they are still at an early stage and developing all the
time. As such any
feedback and support you may have for these pages is more
than welcome, it is
infact encouraged. The more input I get from its users the
better, as then I
will know what is good and bad about these pages and can
change them
approproately in the hope of increasing their value to their
readers.

Where do I find the Atari Web page?
~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~
>From your Web browser choose to open URL and enter the following address:

http://www.mcc.ac.uk/~dlms/atari.html

If you can store a hotlist of addresses or something similar on your browser
then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and
don't forget to write with your thoughts.

(*NOTE*: This is the new site for the Atari Web pages, take note of it!)

Newsgroups
~~~~~~~~~~
Atari related newsgroups. Send updates. The currently supported news are:

comp.binaries.atari.st
comp.sys.atari.advocacy
comp.sys.atari.announce
comp.sys.atari.st
comp.sys.atari.st.tech
comp.sys.atari.programmer
rec.games.video.atari
alt.games.lynx

What to expect in the future
~~~~ ~~ ~~~~~~ ~~ ~~~ ~~~~~~
..... In the near future I will be adding a Portfolio section to cover the portable
computer by Atari called the Portfolio. This area will be supported by the Portfolio club.
~~~~

Thank you and see you with the updates to these pages next month!

Mark Stephen Smith : msh@dl.ac.uk or dlms@nessie.mcc.ac.uk
Atari Web Pages : http://www.mcc.ac.uk/~dlms/atari.html

GERMANY:

I am searching for Portfolio-Stuff on the net... Pages, Software, etc.
Do you know some places for it? I've already put some Portfolio-Info's
in my Homepage (rzserv2.fh-lueneburg.de:1701/u1/wwg28/www/acf.html).

greetings,
Wolf

From: wwg28@rzserv4.fh-lueneburg.de (Wolf-Rainer-Gross)

****
GERMANY:

Hallo,

A german company in Hannover still sells portfolios for 130 DM.

The address of the Hannover company is:

Digital Data Deicke, Nordring 9, D-30163 Hannover, Tel.: +49-511-6370-54 (-55).
FAX-number I don't have.

Best greetings

Rolf (henze@hrz.uni-kassel.de)

****
SWEDEN:

I live in Sweden and have looked at a portfolio at a shop in Stockholm. Since I am an ST owner, I would love to have a Portfolio as
things from you I will definitely consider a Portfolio.

Regards

Mikael Hillborg,
Computer Scientist,
Sweden

Portfolio Support Area - Fred Horvat

Well a couple issues back I mentioned I would give a list of
dealers that supported our favorite palmtop. Well below is a list of
places that either have hardware, software, or both for the
Portfolio. Besides the listed dealers a great source of information

and software is online. The larger bulletin boards services like Compuserve and Genie have file directories just for the Portfolio. I also believe under the Atari file archives you can still request files from the Portfolio directory. Besides the files, online there is a wealth of information about the Portfolio and palmtop computing in general. Beside bulletin boards as a source for public domain an shareware software is from public domain librarians. For a list of commercial software vendors check out the book that came with every Portfolio called "APB" which stands for Accessories, Peripherals, Bulletin. Besides having commercial software available it has tips and other use full information. The version I have is Volume 2, Number 1. I believe this was the last one printed. If you don't have a copy of the "APB" contact Atari, the cost listed on the cover is $1.00. Last but not least let us not forget our local user groups and Atari dealers that have been there all these years for us.

Atari Computer Corporation
1196 Borregas Avenue
Sunnyvale, CA 94089-1302
408-745-2000

Services Available : Atari Portfolio purchases, exchanges, APB software purchases (if available).

THE UNITED STATES

Hello again,

>There are some arichves that have PF files.
>There is CAIN who has Portfolio Corner.

I have taken all the files from archive.umich,edu, and am looking through them. Cain carries only a little bit of info, I will send them some when my pages are ready.

I am putting together WWW page, I have the FAW, and and putting up anything else I can about the Portfolio, please sen me any info you have, and I'll put it on a special page. you can MIME enclose it in a message here, or you can ftp stuff to:
donna.umd.edu in the /pub/incoming dir.

Andrew Diller |

FRANCE

The company TURTLE BAY INFORMATIQUE sells Portfolio and peripherals. They have ordered some products from our Portfolio club. This means that PF users in France can buy the products in their own country.

Here is the address:

Turtle Bay Informatique
90, rue massena
69006 Lyon
tel: 72 75 92 84
fax: 72 74 49 85
e-mail: 100616.3455@compuserve.com

****
ITALY

An Atari dealer from Italy has just contacted us. More information in next issue or upon request.

****
HELP CORNER

This part of Portfolio News is designed to bring your
questions, troubles and worries to the public.

If you have any suggestions that may help send your help to
the person asking for help and send also a copy to Portfolio
News. All PF users may benefit from it.

Let us start:

You might be able to help me with a problem.

I recently bought the serial link which came with a card (Slave+ ver 2.5)
and software for my PC (Master PC ver 1.0) but I am having trouble with them.

I know that I have things configured properly because the PC lists the
directory of the Portfolio upon starting the software. But when I attempt
to transfer a file from the Portfolio to the PC the program eventually times
out with a message that the Portfolio is not responding. Then I find a zero
length file on my PC so at least I know an attempt was made and that the
connection is good.

Any ideas what would cause this program to lock up when attempting to
transfer files. I am finding it very frustrating not being able to download
the interesting software I have found for the Portfolio. I also need a way
to back up the data I have on the Portfolio.

Take care...

Darrell Burkey +61 6 295 6820 (work)

Try "http://www.pcug.org.au/~dburkey"

****
SOFTWARE PACKET No 2

This issue of Portfolio news comes with a packet of software for Portfolio. Here is a list:

ACOM.EXE a communication program for serial interface
ACOM.DOC text to the file

60COLS.EXE 60*10 characters on PF screen a demo by Dave Steward
60COLS.DOC text to the file
CHARDATA.DAT character set for 60COLS.EXE

PSHELL simple shell commander for COM and EXE files on Portfolio

How to get the files:

1. Save the e-mail message into a file. In ELM mailer press
s) option and enter a name of the file. I think it is good
to name the file SOFT2.

2. Then quit your e-mail program. You will be at the unix
prompt.

3. Use the UUDECODE command to convert the SOFT2 mail file
into data file.

Enter following:

UUDECODE SOFT2

The result should be a file "soft2.arj" 26898 bytes long.

(Be careful about small and capital letters - unix makes
difference between them)

4. The "soft2.arj" is a normal ARJ file. You must tranmit
this file from your unix directory to the local (DOS)
directory. You fill use the FTP programme.

5. The soft2.arj can be extracted by arj.exe file.

6. Here is the result:

60COLS EXE 9,419 04-27-91 3:36a
60COLS DOC 1,805 04-27-91 3:39a
CHARDATA DAT 168 04-27-91 1:51a
ACOM DOC 13,177 08-21-91 10:37a
ACOM EXE 9,955 08-21-91 10:37a
PSHELL EXE 1,563 09-09-91 10:25p

7. If you have any problems ask your internet supervisor or
send e-mail to our club.

****
SERIAL COMMUNICATION - ACOM
Finally a serial software that works

I have come across a few programs for serial communication.
The only that worked is the ACOM.EXE

More info about the program (the complete documentation is
in the ACOM.DOC file)

ACOM is a communications program written for the Atari
Portfolio. However, it will run on IBM PC compatibles as well.
Its purpose is to provide enhanced terminal emulation and file
transferring capabilities for the Portfolio. It can copy the
conents of a 128k ramcard from the Portfolio to a PC in a minute
and a half. ACOM requires approximately 32k of memory for all code and
buffers.

ACOM can be used as a terminal emulation program, as a file
transfer program, and as a host control program. It is able to
determine whether it is running on a Portfolio or a PC, and setup
its interrupt handling accordingly.

Regarding the speed of the Portfolio com port, it seems that
38400 baud may be the highest feasible transfer speed. This is
about the point that other factors influence the transfer rate

more than the raw communications port speed. This speed also
works satisfactorily on most other PC's I have tested.

A fair amount of time and money has been spent developing
this program. If ACOM proves useful, your comments and bug
reports will be appreciated. Should you wish to compensate the
author, get on our mailing list, and receive the latest copy of
ACOM, please specify your disk size and send $25 to

Roudley Associates, Inc.
PO Box 608
Owings Mills, MD 21117

If you use the program, and do not wish to compensate the author,
please be generous to those in need and increase your donation to
your favorite charity or church.

Charles Cook

How to order the products

1. Decide what you want to get. It seems better to find
some PF friends and share the expenditures on charges
for sending the stuff.

2. Send us your "order"

by e-mail to sedlakj@dec59.ruk.cuni.cz
by fax to + 42 2 29 51 86

3. We will contact you back, telling if the products are
currently available and stating the total price in CZ.
(total price + shipping charges).
Current rate: 1 USD makes 25.30 - 26.30 CZ crowns

4. Send the money in USD or DEM to our bank account

account no. 770252-028/0800

MORE INFO ON THE 1 MB RAM CARDS

For the technical specifications, I will quote from the booklet supplied
with the RAM card itself. "The FMAP 1 fits in the Atari Portfolio memory
card slot like 128K RAM card and has 8 ti;mes the file storage capacity.
The memory is organized in 64K blocks. It offers over 10 year data
retention without any batteries or any other power source. Data bits are
retained as static charges on electrodes encased in nearly perfect
insulator. This is essentially the same mechanism as that used in EPROM.
Unlike EPROM, flash memory can be erased (flashed) and rewritten while still
plugged into the Portfolio. The flash memory card data is also safe from
magnetic fields that can corrupt data in ordinary magnetic storage media.
The cards add only baout 3% to the load on the Portfolio's batteries when it
is turned on and no load when the Portfolio is turned off. The card can
safely be left inserted continuously."

****

THE 1.44 MB FDD UNIT for Portfolio

In 1993 one Portfolio fan succeeded in connecting a 5.25"
unit (360 KB) to Portfolio. Later the connection to 3.5" FDD
unit (1.44 MB) was realized. The purpose of this was to
replace the expansive RAM cards by a cheap device with
multi-fold storing capacity. The cost of the unit is lower

than the price of two Atari RAM 128 KB Cards.

In the end a special 3.5" FDD unit for ultra light notebooks has been utilized. This unit also solves the problem of power supply. The ordinary FDD units require 12 Volts supplies. The ultra light FDD made by TEAC requires only 5 Volts and is only 12.5 mm high.

The idea was to create a device smaller than the Portfolio itself and the idea was realized. The circuits has been place under the FDD drive so that the total height do not exceed 20 mm. There is no comparable device in the world market.

The unit also includes a parallel interface fully compatible with the Portfolio interface. This means that the internal applications and file transfer software can communicate through the interface without any difference. The built-in interface is fully "transparent" - this means that you can read from the diskette and at the same time print the data through the parallel interface.

The FDD unit is able to read and write 3.5" diskettes both of the 1.44 MB and 720 KB capacity. The IBM PC standard is fully supported.

Another important part of the unit is the software driver that installs the FDD as another drive of your Portfolio (Unless other drives already installed, the FDD will appear to be the drive D:). The driver is a 3 KB long resident program that is loaded via CONFIG.SYS command DEVICE. You can use the new drive (D:) as any other drive you are used to.

The greatest problem to solve was the power supply. The FDD unit requires at least 5 Volts and Portfolio can give 4.5 V at its maximum. (If NiCds are used only 3.6 V). The problem was also increased by the fact that the motor of the FDD needs 600 mAh at its start and this power "shock" may destroy some Portfolio circuits.

The solution was found in an additional NiCd battery pack (7V, 750 mAh) that is connected into the FDD unit from the back side. If fully charged, Portfolio can work with the unit for 4 to 5 hours. The battery pack is charged automatically if original Atari AC adapter is connected to Portfolio. The original Atari adapter must be used as it gives the accurate voltage for recharging the NiCd pack. (The universal AC adapters are usually weak and if they are connected to the 750 mAh pack their output vo ltage goes down.)

Other unique qualities of the FDD unit

* Cash utility

If you install the driver by means of the DEVICE command in CONFIG.SYS the driver creates a CASH memory area that buffers data. It is necessary to make the unit work.

The reason is following: Portfolio has a bit simpler BIOS than PC. And it is not designed to work with large quantities of data. If Portfolio reads from a disk device it reads always one sector only. And if two following sectors are to be read from the diskette, the BIOS has no time to work with the data. This causes big delays. (The diskettes rotates 6 times a second and thus reading 18 sectors (one track, that is 18*512 bytes) takes 3 seconds. So for example to read 43 KB PBASIC from the diskette would take 15 seconds.

The algorithm of the cash is the same used in Pentium processor : Write-Through and Write-Back. This enables to read one track at once (9 or 18 sectors during one rotation) and then the BIOS reads the data in its slow way from the cash.

The same problem is when writing data back to the disk. The cash solves it again. All data are written down into the virtual sectors in the cash and when the output operation is finished the data are written to the diskette at once.

* The Portfolio speed

The slow speed of the Portfolio allows only 720 KB diskettes to be processed. If standard rutines are used for reading 1.44 diskettes, every third byte is lost. This has been solved by a special hardware solution that locks up the clock cycle of CPU bus and thanks to a special rutine that is two instructions shorter than the standard rutines.

* ROM error

Yet another problem remained. There is some error in Portfolio BIOS that causes the failure of MkDir (INT 21H, Fn 39H) function with 3.5" 720 KB diskettes. If you use the MkDir command with 720 KB diskette Portfolio will crash. The data on diskette are lost and FAT is damaged.

Even this problem has been solved and the driver also takes care of the MkDir function and if the user attempts to make a new directory the driver replaces the bad rutine in ROM by its code.

About the designer of the FDD

The FDD is a result of one persons efforts. "I spent the whole 1993 on the FDD development", says Tomas Dusek the father of the unit. "I think it was worth while. I learned

the very details of PC BIOS and I made something that nobody
else has made. After the PortWalk (tape recorder interface)
it was my second peripheral for Portfolio. The crazy thing
is that I developed the unit in my free time, ..., and it
was mainly sponsored by money from my full time job. At day
I worked in one computer comp any, in the evenings I used to
solder. When I started to produce more units I had to make
the business legal - I had registered a private company
"Sunny-Soft". It is not a big company - in fact just me. But
it works."

BUY THE FDD UNIT NOW

The 1.44 MB FDD unit and more at the price of just two Atari
128 KB RAM Cards!!!
The FDD units opens the data world to you and your
Portfolio. Now you can read the data from diskettes directly
without any cable and file transfer software. You can save
the results of your work on the diskettes and work with it
in your desktop PC in almost no time.

SPECIAL OFFER:

1.44 MB FolioDrive FDD UNIT
25 pin parallel interface on board
7 Volts NiCd battery pack
+ parallel cable
+ software on diskette included
!!! + 32 KB RAM CARD with installed driver

This all just for 5800 CZC. Where else in the world can you
get so much for your money?

From: cgra@se.bel.alcatel.be
Message-ID: <3ttcbq$csn@btmpjg.god.bel.alcatel.be>
Source record: 162454

In article <3tg2a4$8bc@apopi.u-strasbg.fr>, Jean-Luc@atlantis.u-strasbg.fr (Atlantis) writes:
> Is there a way to transfert Atari files on a DOS or Mac hard drive ?

Via floppy or a null modem cable is the answer.

Floppy: ST floppies are formatted in the same way as DOS floppies, so they should be readable by DOS directly and by Macs using Apple File Exchange in System 6 or the built-in stuff in System 7.
BUT: * older TOS versions format the boot sector in a way which many PC BIOSes refuse to accept. AFX can also be very choosey. Fortunately ST's seem to be pretty omivorous, so the rule is:
-- format the disc on the Other machine --.
* most ST's only have a 720 KB (DD) drive, some only have a 360. To be bourne in mind when formatting the disc.
* most of the popular archivers exist in ST, DOS and Mac versions, so you can compress files on one machine and decompress them on the other *provided the archive fits on to one floppy*. If that is not the case then the only solution I know of is a program called SPLITTT, which exists for both TOS and DOS (but not Mac SFAIK). Or maybe GNU tar ...

Cable: Connect the two machines using a "null modem" cable, start your favourite comms software for each platform, set one to send and the other to receive, and away you go ...
* the cable needs to have all of the right wires connected inside. Some cheap cables may not work (be suspicious if a lot of the pins in the male connector are missing).
* depending on the age of the TOS in your machine, you may need a patch (a small program to go in your AUTO folder) to make the flow control work perfectly.
* given both of the above, you should be able to transfer data at up to 9600 baud no problem, probably faster. With a good protocol (like Zmodem) that means about 1 KB/second, 3.6 MB per hour. OTOH if the flow control isn't working you may be reduced to transferring at 300 baud ...

This is a FAQ, n'est-ce pas?

My problem was that when my provider asked for the protocol I had set up
chatfile to respond with the same string the NOS/Oasis package sent,
something like ppp mru=150 idle=300. I tried just sending PPP and that
worked fine, don't ask me why though.

Cleaning the dust out of the inside of computers is a good idea. Using a vacuum cleaner to do so is NOT.

Do not let a common household vacuum cleaner anywhere NEAR any piece of electronic equipment that you want to keep. A running vacuum generates tremendous static electricity around the nozzle, even in humid weather. You might as well shuffle across the carpet wearing rubber shoes, run your hands through your hair, and then fondle the CPU.

This doesn't apply to the special static-proofed vacuums sometimes used by technicians, but these are few and far between--the small so-called "computer vacuums" sold in office supply stores don't usually have this kind of protection.

A much better idea is to use a can of compressed air to blow the dust out (careful not to blow it into the floppy drives) and then collect the dust with a damp rag. (Canned air is available at good computer and camera shops.) If your computer is REALLY dirty inside, the best thing to do, believe it or not, is to take out the circuit boards and scrub them gently all over with pure water and a clean toothbrush. Then let them air-dry. (No electric hair dryers or heat lamps!)

Hoping it's not too late,

Message-ID: <3ttol8$1qg@whitbeck.ncl.ac.uk>
Source record: 162460

I was at my parent's house recently and, feeling bored I decided to dig out my faithful old Atari ST for a couple of hours of computer based entertainment. For some mysterious reason, I was drawn to loading up Dungeon Master, wondering why I'd never bothered to complete it. Once it was loaded I found out why. My stalwart band of ruffians appears to be stuck on level nine in front of this gate that cannot be opened. Behind the gate is a chest and behind the chest is a pit. On pulling the lever next to the gate another pit opens up and the chest drops through. There are some stairs which you can go down that lead directly under the two pits and you can find the chest and open it. In the chest there is a green gem and a scroll which says "put the gem back....". Put the gem back where? In the chest-nothing happens. If you throw the green gem back through the gate it just falls back down the far pit. The chest won't fit through the gate. I'm I being remarkably thick here or what? If anyone knows how I can get this gate open I would be very grateful if they could help me.
Cheers,
Mike.

Hi Mark,

In article <DAy5t9.CwG@freenet.carleton.ca>,
Mark Montreuil <ai066@FreeNet.Carleton.CA> wrote:

>I tried exporting some RTF's from WP 6 to import on my Atariworks, and
>Works coughed and died. When I tried exporting rtf's from Works to WP, WP
>did not like them either! Is Papyrus better at handliong RTF's than
>Works?

Until now I haven't seen a program that supports ALL RTF-commands.

Atari Works hates CR/LF. Papyrus (3.11 Gold) doesnt't understand \line,
That's Write 4 doesn't understand \ (as a linebreak). Script handles TAB's
in an other way than Papyrus. That's Write seems not to be interested
in the given layout inside an RTF/file.

As an author of a textconverter (called UDO, soon coming in an English version) that
supports RTF, it's very frustrating to see all those problems while
importing RTF-files. Grumble.

Message-ID: <3ttiovEmso@uni-erlangen.de>
Source record: 162464

We tested the Falcon's frequency response and the harmonic distorsions.
Our measurements show, that the cut off frequencies are correct, so the
whole spectrum of the possible frequencies is transmitted.
The bass boost is about +3db at 50-100 Hz in the output circuit.

Another thing was rather dissapointing: Noise. Due to this noise
practically you do not have 16bit quality, but only about 12-14 bit!

Perhaps I'll post the graphs of our measurement here (but they were intended
for publication in a magazine).

| In http://www.yahoo.com/computers/software/emulators, I read about an
| ST emu. for PC's. Has anyone else ever heard of this? thay're calling
| it Gemulator, and seeing as my poor old STf id dying, I'd like to know mre
| about this.

Geez, where have you been for the last few years? Under a rock??? :)

Seriously, the Gemulator is the surely most well known and highly publicized ST emulator available for the PC (there is a UK offering called Janus but I know little about it). It consists of software plus a short-slot PC card with sockets into which you install Atari TOS ROM chips (such as 2.06, 1.4, 1.0, etc). You can have multiple TOS sets installed and switch between them via software. It really _is_ a neat hack.

I've owned two of these so I can say without hesitation that they do work and work very well, thank you. The latest version (4.0, I believe) should be even better according to what I've read about it. I only have a few cautious comments. The Gemulator is NOT well suited for playing Atari games or MIDI work and you obviously want the fastest PC you can get to use it with (a 486-66DX2 is on the order of a MegaSTe, speed wise). But for most productivity applications (like Calamus SL), it's just fine.

As with most emulators, I still think there is no substitute for the 'real' thing but if your situation dictates, the Gemulator is a viable alternative.

For the latest info you should contact the author directly, that being Darek Michoka of Branch Always Software, at:

Thanks to Clarence T. Chang for the following info:

Try ftping it from 146.169.2.10. Then

cd computing/systems/atari/uni-paderborn

it's in there somewhere.

I found it in tools/opus

>ATDT....
>
>but I think that's just a refinement ...

Yeah I've got it up and running now, I was sending too much information
and the protocol prompt. The only problem I'm having now is that Chimera
keeps on closing itself so I can't really use it very much.

>BTW are you using a mono monitor or have you found a way to use SVGA?

Yep I'm using an SVGA, you need a program called BOOTCONF.APP or something
to set the Falcon to boot in 2 colours. If you haven't got then let me
know and I'll binmail it to you, it's only a few k long.

Regards.

From: johnmoon@connexus.apana.org.au
Message-ID: <3tu58e$llc@studioweb.com>
Source record: 162471

The TAF X-windows/Chimera/ftp blah blah blah stuff is in ftp.cnam.fr
(sorry i cant remember the dir).

Only problem i have is getting it all to talk to my modem properly.
I think it has to do with the fact that it is set up for the TAF members
to dial-in to where ever it is they dial in to.
Gotta do some serious reconfiging cos' it wont talk to my slip/ppp
properly as yet. 8-(

I've got it all running on my 4meg STe, and my friendly UNIX wiz says
it is a bit slow, BUT.... quite usable 8-)

From: ai066@FreeNet.Carleton.CA
Message-ID: <DBKAyG.3oA@freenet.carleton.ca>
Source record: 162472

If you have Atari information that you'd like posted on the WWW, for your club, business, or personal satisfaction, feel free to email me. I have a publicly accessible space on the WWW that I'm offering very reasonably-priced access to (for loyal Atari fans), and can create WWW pages for those of you with specialized needs. I'm also on the lookout for Mega Ste specific info, as I'm posting my own Mega Ste page, which will include info relating to the specifics of the Mega Ste that make it unique.

So, if you've always wanted your product/catalog/club info on the Net, and you don't have access to the Web, why not drop me a line.

regards,

Source record: 162473

I have a couple of questions about the MiNT-Net distribution TAF
is putting out:

1) What is their snail-mail address?
2) Can they accept US personal checks?
3) Do they have a contact person I call via voice?
4) Can they accept credit card orders?

Also, embarrassing as this may be, I don't know how to send a
message to the newsgroup (I am using WinCIM on my PC at work
<retch>) to send this. Can someone enlighten me?

I am new to this internet stuff but have been using Atari computers for ten years as music sequencers. Here at work a new mac system has been implemented and that is how I am getting here now. I still have my old 1040 ST sitting around at home and was wondering what it's going to take to get set up for an Internet connection. Is there software that is anyware as elgant as the stuff that works on this here Macintosh, such as Eudora, and Netscape and the like... In otherwords, can I make it work cheap. Please send replies to Andy B. cdp@deltanet.com. Please direct your responses in a technically unsophisticated manner, so I can understand what I need to do. Thanks in advance.

Andy B.

> help me.

I completed this game some time ago & I cannot remember exactly how I got
past this gate, but there is one or more secret rooms on this level & one
of them has a pit that I think drops you somewhere behind the gate
(remember to close the pit behind the gate first). This may be a very
faulty recollection, so please don't flame me if I am way off. The complete
solution is on a.a.u.e, but I guess that you don't really want to be
tempted.

Actually, I hope I forget some more so that I can try DM again :)

Lawrence Wright (ylwm0118@yvr) wrote:

: Hi. It's time, I think, for me to do some creative HD maintenance.

: I want to erase my 21 MB C drive, and replace it with two 10 MB
: partions, leaving my 191 D drive intact. Now:

: Can I (using ICDFMT) copy partion #2's info into the #3 slot, and
: clice up partions #1's info into two partions, then WRITE PARTION
: INFO ONLY? And then REBUILD ONE PARTITION for the first two?

Actually, it's a little easier than that. After backing up your C partition, go into ICDFMT, wipe the C partition, then go and copy down all of the start/end sectors for your partition. Then all you need to do is redefine the start/end sectors for drive C by splitting it up between two partitions. For example, if C currently starts at 1 and ends at 20000, you can then redefine C as starting at 1 and ending at 10000, then underneath create a new partition that starts at 10001 and ends at 20000. Then you can reformat both partitions; the remainder of your hard drive should be untouched.

: Can I do this without trashing my D drive? I think so, but seeing
: as
: my floppy doesnt work at all, I can't back-up to be safe.

: Please email if you have an opinion.

: Thanks,

: L.

as spake by CALLUM.LERWICK@f47.n282.z1.fidonet.org (CALLUM LERWICK) :
>Hmmm, think I'll keep with what I've got until I know what the heck I'm
>doing. :) Any disadvantages to c68? (other than more memory...)

Off the top of my head, the two main disadvantages are:

- Preprocessing is a separate stage, so compiling is a little slower.
(On the other hand, hcc's inline preprocessing isn't full ANSI.)

- c68's inline optimizer isn't as thorough as SozobonX's separate
optimizer stage (though I believe there is work in progress to get
these two working together).

Yes, among the best news I have heard for some time. Let's hope
it can use the older 68000 machines and bring them up to system 7 as
well as using the 030 and up machines, of which there are still not
many in the Atari world. I have had GCRs running for three years now
on a Mega 4MB and a 1040 2Mb, and have blessed them lots of times.
Actually, should we not have a special interest group for GCR users?
We might be boring the general Atari crowd

531. TAF disk problems

Newsgroup: comp.sys.atari.st
Date: 1995-07-11 00:00:00 UTC
From: danbrown@on-ramp.ior.com
Message-ID: <3tv0ar$d6b@on-ramp.ior.com>
Source record: 162481

I have downloaded the TAF Mint package files. I have beaten my head on this thing for long enough. I can get it to install correctly (No errors when loading) and even get it to connect to my provider with the Dynamic PPP connection! I would appreciate any help in solving the problems listed below. Here is my setup:

Mega STe w/4mb RAM and TOS 2.06
32meg devoted Minix Partition
TAF package fully installed
Monochrome monitor
Supra 28.8 S/R Fax modem

Problems:

(1) FTP

I can connect to micros fine, and even tell it to "get" a file. It says "port command sucessful" gives me the file name and size, saying that it's started. After a few seconds, it tells me "<Filename>:access denied" I know I can get files off of Micros, It works fine with my Shell account!

(2) Chimera

I can get it to load. But what from there? How do I connect to WWW home pages with it? I thought this also did IRC for me also - and if so, how do I do it? If it doesn't not, How do I IRC with this TAF package?

(3) VI

It seems to have problems... It gets 'stuck' in modes. 99% of the time it won't change modes for me. I know 100%, that my keyboard (including <esc> key) works without flaw.

I would appreciate any help in solving these problems!! I want this to work sooooo bad, it's not funny.

Thanks for your time and patients!

Dan Brown

P.S.

Anyone (who knows what they are doing) want to come to my house and install this friggin' thing for me, and get it working properly? <HUGE GRIN>

One that I can recommend is CKBD. It is an AUTO folder program that runs on
any TOS/MultiTOS/Mag!X, with a CPX for configuration.
Access any special characters on any keyboard using 5 different
methods: Compose, Deadkey, Extkey, ALT-nnn, Keyboard remapping.
PLUS: new flexible reconfigurable mouse speeder. English, German
and French doc's enclosed!
Available as CKBD_13.* on the usual ftp servers.

: a really nice piece or work, just what I've been waiting for.

: Thanks in advance.
: --

: Simon Moore

: smoore@chowgar.demon.co.uk

I am having similar problems. My problem seems to be that it dials,
enters my name password etc, and then says Connected. I then try to run
any client and get Network unreachable, and then after a few seconds I
get a Timeout message from the Chat interpreter program.

If any can help here please let me know. I have set up my domain name as
the name of the provider. the provider is xmission.com, and I set the
name server to a couple of different settings that I got from my trumpet
winsock on the PC. That works ok, so I think the IPs are correct.

thanks

Paul

541. Creative HD Partioning HELP!

Newsgroup: comp.sys.atari.st
Date: 1995-07-11 00:00:00 UTC
From: Lawrence Wright <ylwm0118@yvr>
Message-ID: <BK.BW.805450569.1103527590.ylwm0118@yvr>
Source record: 162491

Hi. It's time, I think, for me to do some creative HD maintenance.

I want to erase my 21 MB C drive, and replace it with two 10 MB
partions, leaving my 191 D drive intact. Now:

Can I (using ICDFMT) copy partion #2's info into the #3 slot, and
clice up partions #1's info into two partions, then WRITE PARTION
INFO ONLY? And then REBUILD ONE PARTITION for the first two?

Can I do this without trashing my D drive? I think so, but seeing
as
my floppy doesnt work at all, I can't back-up to be safe.

Please email if you have an opinion.

Thanks,

L.

A huge your welcome from all of us...

Disconnect doesn't work from the menu (oooppps... an oversight). You can type
'hangup' in a shell and that works. I'll fix that for the next release. I've
also figured out how to improve the speed of the nameserver access. I'll post
a fix for that soon too.

To modify the popup menus, take a look in your $(HOME)/.fvwmrc file - you should
be able to figure it out.

It's been collecting dust since I've moved to Macintosh, Windows, DOS
and UNIX. Here's the details:

* 1040ST
* Color monitor (SC1224)
* second external floppy drive
* a pair of joysticks
* printer (Star NX1000)
* IMG scanner kit (for use with printer)
* Spectre GCR with Mac Plus ROMs (Macintosh emulator)
* Yamaha PSS680 MIDI keyboard (with percussion pads)
* ALL of my software library

I'm not sure what to ask for, so you should give me your best bids. Highest
bidder gets it.

Regards,
K.K.

: > market).
: 500 quid, 4meg, no harddrive. No monitor? EXPENSIVE...
: Booming 2nd hand market? Cant image why... ;)

Look around and you will get some good deals..

I recently bought a second hand falcy 4Mb with 65Mb internal, in a
desktopper case, along with SVGA monitor and The Atari Compendium,
Atari Works, NVDI 3, and ishar 3, and some software which originally
came with the machine.... for... 350 pounds.

Yes, this is very chap, although I have seen some offers not much more
than this. There are people out there selling their Falcons with 4Mb
and hard drives plus loads of software for around 400 pounds...

The second hand market is thriving...

Don't worry about GEM and GFA Basic, OASIS (the internet off line
reader) is GEM based and written entirely in GFA Basic! E-Mail me if you would
like some details.

I have used GFA Basic 3.6TT on a Falcon, it works fine in any TT
compatible screen resolution (320*480 256C,640*480 16C).

As for Falcon enhanced programming with GFA, I couldn't agree more, I
just wish that somebody would finish version 4 of GFA Basic.

I succesfuly configured gcc 2.6.3, so I can compile and link C and C++ programs properly. Thats great. But I was be able to debug C++ programs compiled with gcc 2.5.8 under gdb 3.6 pl 4. And now I can debug only C programs. While I try to debug C++ (compiled with 2.6.3) I've got a message:

Reading in symbols for test.cc... invalid member type dataformat, at symtab pos 16.

Does it mean that I WILL NOT be able to debug any C++ (compiled with 2.6.3)???? I would like to use new C++ feauters like exceptions available at 2.6.3 (and with some bugs removed). I have many good ideas to write good C++ programs... Maybe someone have any idea.

*** ANY HELP WILL BE APPRECIATED ***

: A PHYSICAL (HARDWARE) FIX! RESETTING THE MACHINE, SWITCHING IT OFF AND ON,
: REMOVING THE HARDDISK ETC. DOES NOT HELP - THE BIRD IS DEAD.

: (Was this anything new? Has this subject already been discussed here?)

: Well, whaz dis got to do with me? I've just killed my bird... :-(:-(
: Some serious voodoo is now needed to make my bird rise again. Falcon
: (soft & hard) hackers attention! Here's what happened:

: (I will take no responsibility if someone decides to misuse this information.
: (allthough the exect details remain untold here...))
:
: I got a swedish keyboard on my Falcon. Unfortunately there was no option
: for swedish keyboard map in any of those programs that I have. As I had
: already found a swedish keyboard map in the ROM, I knew that it could be
: activated by simply writing appropriate values into the NVRAM. After a
: while I discovered the location of the NVRAM (I've got no documentation
: for NVRAM) and learned to access it directly. I located the NVRAM system
: variables and the checksum variables. I managed to activate the swedish
: keyboard and alter all other system variables, too. Then I did some
: experiments with "illegal" values. As there are five different color
: modes in a standard Falcon (2, 4, 16, 256 and 65536 colors (0-4)) I, of
: course, had to try writing value 5 into the NVRAM. When I turned the
: machine off and then back on, the screen stayed black no matter what I
: did. Fortunately there was a cure (as the HD and the diskdrive
: (still...) functioned ok): I wrote an autoboot program on my 520ST in
: order to restore the NVRAM on the Falcon. I booted the disk on the Falcon
: (disabling the HD with alternate key) and got the NVRAM restored. Then
: I had to go deeper... The last NVRAM configuration I ever wrote actually
: disabled the screen display AND the harddisk AND the diskdrive. Now
: there seems to be no (easy) way of restoring the NVRAM in order to make

: the Falcon fly again. (Screen is black (no sync - as if the reset button was
: was held in bottom position), diskdrive seems to be completely dead, HD
: "jumps" continuously (as if it was restarted again and again...). Removing
: the HD does not seem to help at all...)

: If there is no easy way of externally resetting the NVRAM, the only solution
: is to replace the NVRAM chip. (Is there one or is it hidden in some other
: chip? Does anybody know anything about this? Is there a battery backup
: for the NVRAM? If there is one, where is the battery located?) PLEASE
: HELP ME DO!

: Thanks for your co-operation. Good night.

558. AdSpeed/BLiTTER conflicts???

Newsgroup: comp.sys.atari.st
Date: 1995-07-12 00:00:00 UTC
From: DOMINGO@news.delphi.com
Message-ID: <3u1qcm$jbc@news2.delphi.com>
Source record: 162354

I have a Mega ST4 with an ICD AdSpeed. I seem to be experiencing a BLiTTER conflict since I will get 10 bombs (I think that is the number) if I try to boot up in 16Mhz mode with the BLiTTER enabled.

Is there a cure for this? My current cure is to have the BLiTTER disabled by GEM in the DESKTOP.INF file. Then I manually switch to 16Mhz using the .CPX supplied by ICD. If I re-activate the BLiTTER there is a good chance that it will crash the computer.

I used to have T-25 installed in this machine and I don't remember having any problems like this. I also don't know if this machine had the BLiTTER daughterboard on the 68000. Is there an easy way to tell? Also, will the fix by ICD (the jumper wire to reconnect whatever was cut when the daughterboard was installed) solve my troubles? Or should I just disable the BLiTTER? (Can I just remove it?)

Thanks in advance!

Dom

Hello android Sharp! The 10.07.95 you talked about "Help on 520ST
translation",and my reply is:
> His publisher refuses to go forward with the book project
> if his staff has to rekey the text.
>

Get rid of that crap publisher that cant read a simple Atari FirstWord
format ;-). Well ;)

The easyiest way must be to save it in plain ASCII text.. Then the publisher
can do what ever he want with the text.

Grtz from Sweden:

I was at my parent's house recently and, feeling bored I decided to dig out my faithful old Atari ST for a couple of hours of computer based entertainment. For some mysterious reason, I was drawn to loading up Dungeon Master, wondering why I'd never bothered to complete it. Once it was loaded I found out why. My stalwart band of ruffians appears to be stuck on level nine in front of this gate that cannot be opened. Behind the gate is a chest and behind the chest is a pit. On pulling the lever next to the gate another pit opens up and the chest drops through. There are some stairs which you can go down that lead directly under the two pits and you can find the chest and open it. In the chest there is a green gem and a scroll which says "put the gem back....". Put the gem back where? In the chest-nothing happens. If you throw the green gem back through the gate it just falls back down the far pit. The chest won't fit through the gate. I'm I being remarkably thick here or what? If anyone knows how I can get this gate open I would be very grateful if they could help me.

The gem has to go back where the chest was. Pull the lever again to close up the pit. Now, you can either back off a long way and hope to be weak enough to throw the gem so it goes back through the gate but not so far beyond that it goes down the second pit, or you can go back to the previous level and find the right pit above the point where you want the gem to go, and drop it through.

] >thx for help,

If the Logicode uses the Sierra chipset, then the voicemail of CoMa might work. (Doubtful). Otherwise it won't. The fax part of CoMa is brilliant though. Problem is, it's extremely expensive! If all you need is fax, and you want it in English, then STraight Fax is a clever little program which does everything a real fax machine does and more. I'm not sure which of the two I prefer, each has it's own interesting features.

STraight Fax AFAIK hasn't been updated in years, so it doesn't support Class 2.0 Fax, just Class 2 but no biggie there.... I have no idea where to get it from, but CoMa has recently been updated, version 3.60 I think, on ftp.uni-kl.de in pub/atari/incoming/ (Coma_360.zip/lzh) or something to that effect.

565. Adding another Drive to a Megafile 60

Newsgroup: comp.sys.atari.st
Date: 1995-07-12 00:00:00 UTC
From: Bob Brown <bob@sol.earthlight.co.nz>
Message-ID: <Pine.SUN.3.91.950712000008.1983A-100000@sol.earthlight.co.nz>
Source record: 162404

Hi There,

Some time ago, I went out and bought a Megafile 60 for a heap of money. I'm tinkering around with it now. I've got another Seagate Drive, and I wanted to plug it in as well. Off came the lid and I had a look inside.

There's two ribbon cables going from the drive board to the drive itself. I unplugged the drive and plugged in the new one, formatted it and everything was fine. I noticed that there is a row of 8 jumpers, labelled A-Q. What are these used for?

I had a look to see if there were extra plugs for a second unit. Just above (toward the rear of the 'box') the smaller ribbon cable, there's another connection that has never had any pins in it, although the solder dots are there. Can this be used for a second drive?

Uhh ... that's about all. What's the maximum size for a MFM drive?

Cheers,

566. Falcon users & programmers please read this!!!

Newsgroup: comp.sys.atari.st
Date: 1995-07-12 00:00:00 UTC
From: nuuja@cc.Helsinki.FI
Message-ID: <3tv3tv$6h1@oravannahka.Helsinki.FI>
Source record: 162405

Did you know this (I did not):

WITH A SIMPLE PIECE OF SOFTWARE IT'S POSSIBLE TO DISABLE THE ATARI (OR
C-LAB?) FALCON IN A WAY THAT THE MACHINE CANNOT BE BROUGHT BACK TO LIFE WITHOUT
A PHYSICAL (HARDWARE) FIX! RESETTING THE MACHINE, SWITCHING IT OFF AND ON,
REMOVING THE HARDDISK ETC. DOES NOT HELP - THE BIRD IS DEAD.

(Was this anything new? Has this subject already been discussed here?)

Well, whaz dis got to do with me? I've just killed my bird... :-(:-(
Some serious voodoo is now needed to make my bird rise again. Falcon
(soft & hard) hackers attention! Here's what happened:

(I will take no responsibility if someone decides to misuse this information.
(allthough the exect details remain untold here...))

I got a swedish keyboard on my Falcon. Unfortunately there was no option
for swedish keyboard map in any of those programs that I have. As I had
already found a swedish keyboard map in the ROM, I knew that it could be
activated by simply writing appropriate values into the NVRAM. After a
while I discovered the location of the NVRAM (I've got no documentation
for NVRAM) and learned to access it directly. I located the NVRAM system
variables and the checksum variables. I managed to activate the swedish
keyboard and alter all other system variables, too. Then I did some
experiments with "illegal" values. As there are five different color
modes in a standard Falcon (2, 4, 16, 256 and 65536 colors (0-4)) I, of
course, had to try writing value 5 into the NVRAM. When I turned the
machine off and then back on, the screen stayed black no matter what I
did. Fortunately there was a cure (as the HD and the diskdrive
(still...) functioned ok): I wrote an autoboot program on my 520ST in
order to restore the NVRAM on the Falcon. I booted the disk on the Falcon
(disabling the HD with alternate key) and got the NVRAM restored. Then
I had to go deeper... The last NVRAM configuration I ever wrote actually
disabled the screen display AND the harddisk AND the diskdrive. Now
there seems to be no (easy) way of restoring the NVRAM in order to make
the Falcon fly again. (Screen is black (no sync - as if the reset button was
was held in bottom position), diskdrive seems to be completely dead, HD
"jumps" continuously (as if it was restarted again and again...). Removing
the HD does not seem to help at all...)

If there is no easy way of externally resetting the NVRAM, the only solution
is to replace the NVRAM chip. (Is there one or is it hidden in some other
chip? Does anybody know anything about this? Is there a battery backup
for the NVRAM? If there is one, where is the battery located?) PLEASE

HELP ME DO!

Thanks for your co-operation. Good night.

*LarryTee (Lauri.Nuuja@Helsinki.FI)

You can use Gemveiw to convert between Qfax and Coma formats.

I do this all the time because I only have a Qfax driver for Calamus.

I think you should download and try CoMa (version 2.90 is just out).
Coma does all the things you mention (except outgoing modem), but it is fairly
expensive. OTOH, you can try before you buy and determine if the support for
your modem is good enough.

Hi folks,

I am looking for a cheap solution for my data storage problems.
Someone told me that it is possible to attach SCSI-Harddisks on a
Atari 1040ST computer. Who knows more about it and help me ?

e-mail: wm@ast1.uibk.ac.at

PS: Of course, it must not be in any case a SCSI- Harddsik.
Even others will help me if they are cheaper than the
original Ataris.

Using Outside or VRAM. I have VRAM and I have to admit it doesn't work
all that brilliantly with MiNT. Anyway I failed to get Chimera to run
with VRAM, sh crashed during X initialisation. (Remind me to find out
what causes sh to be run and see if it wouldn't be possible to use init;
that should save on RAM).

Simon,

What is your system config? Is your GCC setup under TOS, MiNT or Linux?
If you have an '030 machine and are not developing for GEM, I'd strongly
suggest setting up Linux (I have no probs debugging c++ progs compiled
under GCC 2.6.3).

Sounds good, where can I buy such a Mac? ALl the reasonably priced Macs
come with a more or less machine specific PDS. NuBus Macs are obsolete,
the first PCI Mac is there. But - only specifically designed PCI boards
work at reasonable bus transfer speeds. And an Apple Workgroup Server 95
at 8,888 DMs (6,500 US$s) is expensive even when compared to a Medusa T40.

It was one of the first problems with my F030... :)

The problem is that if you put some incorrect data to NVRAM the F030
switch itself video mode to 'hardware' ST HIGH. (I guess that you have the
same problem witch I had).

So that's the solution:

You're right, it's not software. You have to connect your Falcon to ST
Mono monitor or to Multisync monitor. Then you need apriopriate software
to write correct data to NVRAM. I don't remember now what was the program
name that I used, but I suppose that there is a lot of stuff being able
to do that (eg. try boot.cpx).

| I have tons of great programs, especially games that run in ST Low and
| Medium. The usefulness of MagicMac seems pretty limited if it can't run
| any of these!

While I admit it would be nice if MagicMac supported all resolutions and
was 100% compatible with all games, the fact remains that many people use
their Atari computers for more than just game playing -- not that there is
anything wrong with a bit o' virtual recreation, of course. :)

The ability to run Calamus SL in a familiar environment (TOS-like Magic)
but on a blazingly fast machine _must_ be a Godsend to many serious users.

For me, my only wish would be for GFA compatability. <sigh>

X-Control's CPX-modul called "File-CPX", if I remember it correctly, is
capable of changing just anything, including TT-RAM flags etc. Should be
found from ftp-sites, maybe as a part of some collection of modules.

Nothing new here - and NO PANIC =-) !!!

Just download yourself a tiny prg called "Reset NVRAM" (sorry, can't
recall the actual filename - but look at ftp-sites' Falcon-utilities
areas!). Run it once, and bingo: bird flies again!

After this magical trick, you'll have a German-speaking Falcon most
probably, so you'll have to change the NVRAM's language and keyboard
settings to whatever you want them to be yourself.

It seems to me that just about everybody _has to_ confuse his Falcon's
NVRAM at least once, just for fun and curiosity ;-) ...

Kippis!

No it's because the ST line has the software backup for MIDI which the other aforementioned machines dont!

Any machine could do an equal job at MIDI as the Falcon or ST, it's just the ST/Falcon has the superior software!

I have a customer who wants to use WP v4.1 to write a big project. This is necessary for file compatability/transportability.

Anyway, I know the last Atari version of WP is 4.1, but what are the dates?

Thanks in advance,

Dom

599. Truetype fonts and NVDI

Newsgroup: comp.sys.atari.st
Date: 1995-07-12 00:00:00 UTC
From: mud08@cc.keele.ac.uk
Message-ID: <3u19om$fua@gabriel.keele.ac.uk>
Source record: 162438

Does anyone know why NVDI does not work with all Truetype fonts?

I recently tried to install some Truetype fonts from a collection designed for Windows. Whilst they work fine under Windows, which also confirms that they are Truetype, when I copied them over to my ST, NVDI stated that they were damaged - and this is NOT true! I tried copying the standard TT fonts that come with Windows i.e. WingDing etc., and they worked fine. I copied the unpacked versions straight from the PC, so its not that I have forgotten to decompress them.

I have looked in my NVDI manual (V3.02) and I cant see anything about compatibility problems. All it says is that you can use TT fonts as used on the Mac and PC - well I've tried it and so far it doesnt seem 100% true!

Any ideas on this one? Are there different Truetype standards or is NVDI the problem here, (or is it me ;->).

Any help gratefully appreciated.

Richard.

From the coments that you have just Posted here you don't know
a thing about GEnie...

Is it a Atari requirement to be so dumb, as this seems to be the problem with
most of the Atari addicts here...

| Hutch, how were you confused with me?

Hopefully, only to the extent that we both occasionally speak out to correct some false information about the Macintosh. With me, it's only a matter of straightening out the facts; I'm not trying to convert everyone to the Mac. With you, it's more of a religious quest. :)

At least the government pays me $25.00/hr (GS12) to get whacked in
the head.But I'm gettin over on them cause now I use MagicCMac on the
Qudra in the hidden corner. It gets me fired up for the Falcon at home.

I remember this part quite distinctly, first you don't have to put
the gem back because I took it & never needed to use it, you see
there were alot of extra dead-ends so to speak added to the game,
you have found one of them. I finished the game without opening alot
of doors, because alot of them are just to make you run out of food,
& water... So forget it & keep going...

P.s. If you want to see the ending I'll upload the *.sav file so you
can see it...

yes the person that told you that was right, on a stfm you can use 2
1 mrg chips & 2 256k simms to give you 2.5Mb, but in the STe you
must fill the bank with all the same type of chips, meaning you'll
need 4x1Mb simms to get it to work...

a> And how pray tell does one achive virtual memory on a Falcon?

Program called OUTSIDE. Virtual Memory manager (up to 125meg I believe depends on your HD of course). The fully useable demo allows up to 8 meg (if my memory serves me correct *groan*!) and can be FTP'd from various places or purchased from any PD supplier worth its salt.

There is also a PD Virtual Memory manager, I have it laying around in my Falcon PDL somewhere, if you are interested I'll rumage for it.

615. For Sale: ST Hardware

Newsgroup: comp.sys.atari.st
Date: 1995-07-13 00:00:00 UTC
From: klassa@aur.alcatel.com
Message-ID: <3u3gd5$2b2@aurns1.aur.alcatel.com>
Source record: 162304

Hi-

I've got the following for sale... I'd prefer to sell locally (Research Triangle, North Carolina area), but I'd be willing to sell outside the area if we can come up with a mutually agreeable method of payment.

o Atari 1040ST with 1MB RAM and TOS 1.4
o Golden Image Mouse (the original Atari mouse died years ago)
o Atari Color Monitor
o Atari Monochrome Monitor (*)
o Supra 20MB Hard Drive (with Case, Power Supply, etc.)

(*) The mono monitor gets a little flaky sometimes and requires adjustments to one of the pots... Once tweaked, it works fine until it gets too hot, then requires adjustment again. [The color monitor works perfectly.]

Make [reasonable] offers, please... Reply by email, only.

Thanks much-
John

P.S. I'd be willing to drive within a reasonable distance of Raleigh, North Carolina to cement the deal. For a local sale, I'd like to deal in cash, since (these days) you never can tell... Thanks.

616. network st (nest) the biggest atari network going!

Newsgroup: comp.sys.atari.st
Date: 1995-07-13 00:00:00 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <1934dbrewood@nest.demon.co.uk>
Source record: 162305

```
Network ST International Association (NeST).
=============================================

Press Release Issue 010 (21/02/95)

What is NeST?

NeST (Network ST) is an international network based on FidoNet
technology,
dedicated to the Atari range of computers, in particular the Atari ST, TT
and
Falcon. The aim of the network is to provide messaging facilities to
all
Atari users the world over who are interested in the world of
communications
and in the ST. Eventually it is planned that NeST will extend to
virtually
every country in the world, however NeST now links the following countries:

United Kingdom
Canada
The United States
Germany
The Netherlands
Australasia
Italy
France
Spain
Switzerland
Sweden
Czech Republic
Poland
Norway
Denmark
Luxembourg
South East Asia
Belgium

This is by far the largest Atari dedicated network in the world, and it
is
growing rapidly, with an average of a new country coming online every
couple
of months.

NeST members work closely together to generate a good atmosphere; within
NeST
```

you will not find any political battles, something which can't be said for
a
lot of other alternets. NeST also has a habit of collecting programers
from
every walk of life, including some very well known names, who are
either
members of the network itself, or affiliated with it.

NeST has a wealth of message and file echos, ninety percent of which
are
echo'd round the world, and replies can be achieved within three to
four
days. The message echo's cover a terrific range, running from
software
support (ACS, LED, JEKYLL, JetMail, MakeDiff, etc), programing (GFA,
C,
assembler etc), and general interest echo's like the common room where
chaos
rules, and users let off steam, and the Q&A echo where weird and
wonderful
queries are posted.

Or if you are looking for something a little different why not take
an
interest in Space Empire Elite? The game runs throughout the network,
using
special programs coded by NeST members to coordinate and send
inter-BBS
attacks through the network.

NeST allows the use of almost any mailing software, be it F-Net/Crossnet,
or
fidonet technology, to be used to collect mail, giving a very flexible
system
of mailing. Point systems are given rights too, if they take a 'Pvt'
address
in the master NeSTList, they are allowed full participation in the
network,
including taking part in votes on major changes within the network,again
this
is rarely allowed in other networks.

One item that worries some users, and sysops is cost, that is network
fees
for linking into the network itself. With NeST no such fees exist, as
each
member works freely to gain the best connections, minimising mail costs
as
much as possible.

If you want to join a network that's friendly, fun, well informed,
and

concious of what's going on, well why not try NeST, I don't think
you'll
regret it!

For more information contact:

Daron Brewood - 90:90/0.1@nest.ftn
- 95:150/0.1@fanfiles.ftn
- dbrewood@nest.demon.co.uk
- dbrewood@cix.compulink.co.uk

I look forward to hearing from you...

619. Re: MiNT dislikes BlowUP?! Please help!

Newsgroup: comp.sys.atari.st
Date: 1995-07-13 00:00:00 UTC
From: SDavies@mettav.demon.co.uk
Message-ID: <1165@mettav.demon.co.uk>
Source record: 162308

Out of the ether, the following was mentioned by Georg...:

GA> I have Mint (1.12h or something like that) running with BlowUP, but
GA> there is a trick: BlowUP has to be booted _before_ Mint, and you have
GA> to write an tiny
GA> program (I can mail it to you on request) that sets up a BlowUP-
GA> resolution (Mint X11 in 1024*768 :-)). So everything works fine.
Not needed. I run Blowup under Mint and have no problems see the
following fragment from my MINT.CNF file.

```
# Initial bits deleted!
#
setenv HOSTNAME aries
#
#BIOSBUF=yes
#HARDSCROLL=25
#CON=U:\dev\fasttext
#
setenv PATH \bin;\usr\bin;\mgr
setenv SHELL \bin\tcsh.ttp
setenv TERM tt52
#
cd U:\
#
GEM=D:\CLI\MINT\GEM.SYS
EXEC C:\AUTO\BLOWBOOT.PRX
```

Its called BLOWBOOT.PRX as I use XBoot for boot management but it doesn't
affect it no matter what its called.

Umm, John, note the "no web access" bit :)

The closest thing to an FTP address is

ftp.iadfw.net

in incoming/munsie.www/

This gets you to the same place the web home-page gets its files from. You
just don't get the descriptions or anything, not that it matters, as
everything I've seen from Dave has been good! :)

Okay, you're probably all sick to the back teeth with this, but.... :)

What software do I need/can I use to get fully operational SLIP/PPP access
running on an STe with a 14.4K modem? The less I have to pay the better,
as my finances are getting seriously strained.... :(

If I'm correct Hermes is a UUCP package which I don't really need.
Just something that will talk to the server, get the data onto my machine
from where I can manipulate it as usual. I've got a 35meg hard-drive,
which usually has about 20meg free. I'd like to avoid using MiNT if
at all possible, but if I have to turn my E: drive into a MiNT partition,
no biggy, although I have little clue as to how to do so. I've virtually
no knowledge of Unix/Minix etc. at all.

I've got 2.5meg RAM at the moment, but if needed can get it up to 4meg
which would obviously be _better_, but would it be _necessary_?

Lynx would be nice as well... :)

I'm currently adding to the TAF WWW page (not there yet) hints and
tips on how to personalize your X-Windows setup.

Some of the things I plan to have are:

(1) How to change the font size for the windows.
(2) Hints on setting up Chatfiles (Plus samples people have)sent me)
(3) Fixing the disconnect menu option
(4) Personalizing the menus
(5) NetScape - it is possible!

etc.

If you have any ideas please pass it along to me!! (Someone with SLIP
working). Pointers to more docs!

I'd like to have it up soon. But Toronto Trek is coming and I'm quite
busy doing work for that. (Sorry I haven't been able to answer all
the mail that has been sent to me!)

From: DJCHENG@phobos.oit.umass.edu
Message-ID: <3u217m$gls@nic.umass.edu>
Source record: 162321

For those of you interested in musicians who use the ST,
Vanessa Mae (Chun May) just put out an album: Vanessa Mae: The violin player. In the liner notes she credits an "Atari 1040" (no mention of ST or STE) She also credits the program she used, but I don't have it in front of me.
She also used a Mac....
She blends violin with electronic music. Sort of like Tangerine Dream meets the Classics. If any of you listen to Tangerine Dream, remember the last two albums? On Tyranny of Beauty, there was an arrangement of Handel's Largo from Xerxex; Turn of the Tides, Mussorgsky's (Ravel) Pictures at an Exhibition.
Of course, it is with a violin, and she uses her own compositions sometimes. It doesn't have a dance beat or groove, so those of you not into that thing don't have to worry. But a lot of the pieces are fast and won't put you to sleep. (Like that Sleeping with Beethoven disc)
It is in the Classical music section. Or maybe it is still in the New Releases section.

From: ai063@FreeNet.Carleton.CA
Message-ID: <DBnryB.8CJ@freenet.carleton.ca>
Source record: 162322

I've noted that my favourite floppy formatters, FCOPY and FCOPY PRO do not zero the boot sector, when formatting. I use VKILLER to zero the boot sectors.

Is there any danger leaving the boot sectors unzeroed? The formatter with HotWire does zero the boot sector. I haven't checked the TOS 2.06 formatter for this.

Comments would be appreciated.

>problem here, (or is it me ;->).

I am using an atari, a Pc and a Mac. I also have problems transfering
TT fonts from one platform to another (specially with our local
problem, with the positions of the greek characters).
There are some fonts with problems (in the header of them) so for each
font I had problems I used fontographer for windows to change the
header accordingly with the working fonts. Some of them I had to
recreate (in a way). I don't know if that helps but if you want more
email me, maybe attaching a font that you have problem (if it isn't
copywrited of course.

] Russian cars, like Lada, Volga, Moskvitsh, ...).
```

I'm sure ST users feel the same way about the Falcon as 386 users feel about Pentium machines. The ST and 386 are both yesterdays technology, while the ST has held up somewhat better due to improved architecture and more efficient products, the fact remains that with any technology, it doesn't stay current & supported forever.... And the fact that NZ, a country which has seen ANY Atari marketing for about 10 years, hasn't been buying up Falcons in droves, is hardly a big surprise. They haven't been buying up TT's, Mega-STe's, or ST's in droves either, or A-5000's which are superior to what they _are_ buying....

If we want the machine to continue to survive, we can't rely on other consumers or Atari to help us. As is the case with all old-tech, we must help ourselves, and each-other... Anyone complaining about this needs to be whacked around the head repeatedly with a brick until they understand the obvious.... All other methods appear to fail...

Right Hutch! The "normal" ICD utilities may be found on certain
services such as Delphi, CIS, GEnie, and the ICD BBS. The "Pro"
version is something altogether different, and _only_ available as
a commercial package. I think that's what I was saying in my previous
message. I know, you were backing me up! <grin>

641. HD disks on DD floppy drives

Newsgroup: comp.sys.atari.st
Date: 1995-07-13 00:00:00 UTC
From: ai063@FreeNet.Carleton.CA
Message-ID: <DBo7vy.5v6@freenet.carleton.ca>
Source record: 162330

NOTE ON USING HD FLOPPIES ON DD DRIVES

I was advised by a tech rep of a major floppy disk manufacturer not to
use HD disks on a DD drive. He said there was a significant difference
in flux densities of the HD and DD drives that could cause loss of
data when a HD disk (reformatted, of course) was used on a DD drive.

I decided to experiment to test this recommendation. I took HD disks
pre-formatted to 1.44 Mb, reformatted them to 80x10x2 (808 Kb) and
copied a 748 Kb file from my hard drive to the newly-created DD disk.
The file copied successfully using my internal drive (1040 STe) but
not to my external (SF314) drive. I had had previous problems with the
external drive even with "normal" DD disks.

So far I've copied and recopied the same large file to a couple of
reformatted HD disks with no apparent loss of anything. The programs
in the file run OK and I cannot see any problems at the moment.

I should wait for some time to see if there's any change in
magnetization that may cause problems, so I won't know for a while
just how safe it is to continue this practice.

Normally, it's uneconomical to use HD disks to replace DD disks.
Sometimes, however, stores don't carry DD disks and HD disks are
usually not that much more expensive. Obviously, it makes more sense
to stick to DD disks if you have only the older ST floppy drives.

I'll continue the experiment a let you know the results. In the
meantime if any one else has some input, I'd be happy to hear about
it.

KA> Strange! I have never seen a TV who couldn't handle this.

It depends how the TV has been set up at the factory. It will often be the case that 50Hz will sync. but 60Hz. won't.

The solution is to take the back off and find the VSync (VHold) setting which will be OK with either.

Are you perfectly shure it is the Falcon NV-Ram? since I have the same problem myself, And I KNOW it has to do with the reset-button, Sometimes I have to pres many times for the reset-button to "work" nad then I have have to press it many more times to get out of the "reset-state"
Perhaps that is your troubles?

BTW, You should never have started messing with the NV-ram by yourself anyway :) since there already is good programs that do this, like the NVram CPX :)

NVRAM is located in the clock chip (ya know it, it keeps the
time.) I assume that if you were to remove the clock chip's battery
(can you do that?), you should be able to reset NVRAM. What I would
recommend from now on is for you to use a program like BootConf to
set your NVRAM.

Good luck.

Leslie

By using a commercial virtual memory driver like Outside 3.3, or Vram030.
Didn't you know?

Hi ! Walter

Yes its possible to connect a SCSI hard disk to the Atari ST.

You will need to get a host adapter such as ICD's ADSCSI or LINK which
connects between the ST's DMA port and the SCSI drive mechanism.

In the UK try Hisoft on +44-(0)1525-718181 or
System Solutions on +44-(0)1753-832212 for the ICD or other makes of host adapter.

Check before buying that the host adapter you choose will support the hard
drive mechanism you intend to use as some adapters dont like drives
that have parity enabled.

: with VRAM, sh crashed during X initialisation. (Remind me to find out
: what causes sh to be run and see if it wouldn't be possible to use init;
: that should save on RAM).

I am greatly interested in any virtual RAM system for the Falcon. I assume
these are commercial products? Where can I get info from (and hopefully
a dealer in the USA!)

Regarding your X crashing, just INIT=xinit or INIT=startx. Then you don't
need sh. Altho, sh probably doesn't take up that much memory. Only
problem with this is you cannot get OUT of X. You can shutdown the
server, and depending on the state of things, the machine will crash
or standard TOS will start.

btw: I have 16mb of RAM, and outside of sluggishness, Chimera/X/etc
all work fine...

Your welcome. >>>;--}

I know, that was an evil joke, but the only way at this very moment
to get connected to w3 is using MiNT or Linux. For you as Falcon owner I
recommend Linux.

atZ is OK as well. I generally don't reset my modem too much. AT makes sure
and baud rate changes are effected. gin:--gin:--gin basically wiaits a timeout
period for the prompt and presses return if it doesn't get a prompt. It will do
this twice the way the script is written. This is useful for terminal servers
which require return(s) to wake up before giving a login prompt.

The local directory is '/' which you do not have write access to - you must
change your local directory by using lcd from ftp, Just type lcd at a prompt
will change the current directory to you hhome directory. I thought we put this
in the docs but it may be an oversight. You will notice if you have run
ftp from a shell window it works fine since the local directory is whatever
one you were in when you ran ftp.

If you're SLIP or PPP connected just use 'open' and put in a URL - it should
work fine.
>
>(3) VI

It is sometimes slow but it does switch modes. It does disk swapping on
its own to allow very very very large files to be edited. Wait a second after
escape - it really does work.

>is what you should aim at, avoiding 68030 specifics if you can.

Todays Mac programs on a 1 MB ST? That's absolutely sensless. Even 4
MB would be a minimum for doing anything. And more is impossible on
the ST. Also speed would be a problem.

The slowest current Mac uses a 68030 with 33MHz, resulting in about 300%
CPU performance compared to the Falcon. If you use a ST you would be ten
times slower than such a Mac. Almost senseless again.

I think the time for Mac emulators is over. Now you need (and have) ST
emulators...

S>Forgive my directness, but ...
S> I have tons of great programs, especially games that run in ST Low and
S>Medium. The usefulness of MagicMac seems pretty limited if it can't run
S>any of these!

Sorry, but most of these games also do not run on later Ataris (TT / Falcon).
If programs access ST hardware directly and use undocumented features it's not
easy to write a total ST emulator.
It's not MagiCMac's intention to be an ST simulation. It's designed to use
"clean" GEM software on a faster platform.
Using my TT it's also impossible to play ST-low games 'cause its Crazy Dots
graphics card...

bye, Volker

I don't know if it's just me, but ST Format just increased its cover price by about 40% and decreased the amount of pages it was printing saying it was due to a shortage in world wide paper. Also saying that other magazines would raise there prices too...

But I haven't seen that happening at all... and what about the weekly periodicals like TV Guides? they don't seem to have changed there prices!

670. Re: AdSpeed/BLiTTER conflicts???

Newsgroup: comp.sys.atari.st
Date: 1995-07-13 00:00:00 UTC
From: sheppard_r@kosmos.wcc.govt.nz
Message-ID: <3u318o$4bb@golem.wcc.govt.nz>
Source record: 162381

In article <3u1qcm$jbc@news2.delphi.com>, DOMINGO@news.delphi.com (DOMINGO@DELPHI.COM)
writes:
>I have a Mega ST4 with an ICD AdSpeed. I seem to be experiencing a BLiTTER
>conflict since I will get 10 bombs (I think that is the number) if I try to
>boot up in 16Mhz mode with the BLiTTER enabled.
>
>Is there a cure for this? My current cure is to have the BLiTTER disabled by
>GEM in the DESKTOP.INF file. Then I manually switch to 16Mhz using the .CPX
>supplied by ICD. If I re-activate the BLiTTER there is a good chance that it
>will crash the computer.
>
>I used to have T-25 installed in this machine and I don't remember having any
>problems like this. I also don't know if this machine had the BLiTTER
>daughterboard on the 68000. Is there an easy way to tell? Also, will the fix
>by ICD (the jumper wire to reconnect whatever was cut when the daughterboard
>was installed) solve my troubles? Or should I just disable the BLiTTER? (Can
>I just remove it?)

I use mind set for 8 mhz as its better that way for Games but I used to have it
set for 16mhz, the BIG problem is the ICD ADspeed TSR that goes into the Auto
folder, get rid of it, even ICD state that its Buged....

The CPX will run with out the TSR, but I don't bother as I just run the 8mhz PRG
when needed.

That link wire is not needed on some machines, it depends on where the
Trace was cut, mine did not need it at all....

>about this.
>

The gemulator is indeed an ST emulator or ST in a PC, it comes
as a PC card and requires a free ISA slot in your PC.
You will need a fast PC to get the emulator to run at the speed
of a mega ST they say you need a 486/66.

Its available in the UK from the ST Club in Nottingham, sorry dont have the
number here but mail me mas@cbbs.conqueror.co.uk if you want itand I'll
dig it out for you.

Source record: 162387

MagicMac is supposed to be an operating system (on the Mac of course more a system extension, because Apple doen't provide hardware documenation), and will not emulate theAtario hardwarewise (with rare exceptions); even if it would support ST Low, most of the programs will not run, because they will acess Atarihrdawre directly, which MagicMac cannot provide.

Regards,

Alfred

677. v23INF2: Introduction to comp.binaries.atari.st

Newsgroup: comp.sys.atari.st
Date: 1995-07-13 00:00:00 UTC
From: avg@cwi.nl
Message-ID: <DBnK8L.DEt@cwi.nl>
Source record: 162388
Cross-posted to: comp.binaries.atari.st,comp.sys.atari.st

```
Submitted-by: avg@cwi.nl (Annius Groenink)
Posting-number: Volume 23, Info 2

This article is posted twice a month. It gives a short introduction
to comp.binaries.atari.st and describes how to submit binaries to the
group.

I am always looking for suggestions on how to improve the usefulness of
the newsgroup, and can be contacted at the following internet address:

avg@cwi.nl

Annius Groenink, Moderator.

------------------------------------------------------------------------

ABOUT comp.binaries.atari.st

The moderated usenet group comp.binaries.atari.st contains publications
or announcements of binary packages for Atari TOS computers. The
publications on comp.binaries.atari.st may be freely distributed as long
as no modifications are made to the packages. The packages may contain
public domain software, shareware or demos of commercial programs.

THIS IS A MODERATED GROUP. YOU CANNOT POST TO IT BY YOURSELF. Read the
instructions below for submitting material intended for publication on
comp.binaries.atari.st.

------------------------------------------------------------------------

SUBMITTING BINARIES FOR PUBLICATION

Items intended for posting or queries and problem notes should be sent
to avg@cwi.nl. If you are on a UUCP-only site, you can send them to
uunet!cwi.nl!avg. Note that comp.binaries.atari.st is not the correct
place to ask general questions or to ask, "Does anyone have software
that does X?" Post such requests to comp.sys.atari.st or
comp.sys.atari.st.tech.

If you want verification of arrival, say so at the beginning of your
submission, or in a cover note. I try to verify that a program works,
and if I can't get it to work, I may hold up posting it for a couple of
days. Please note that, except in rare cases, software without
documentation will not be published. The backlog from receipt to posting
varies from one to four weeks depending mostly on the set of submissions
currently in my queue.
```

If you are submitting both sources and binaries, PLEASE send the two separately. If I have to separate your sources from your binaries by hand, your submission will most likely sit on the back burner for a while, or be rejected outright.

Please include a description of your program at the top of your article. Look at old issues of comp.binaries.atari.st for examples of the sorts of descriptions I'm looking for. In general you should indicate what the program does, on what types of Atari TOS computers, whether your program requires a certain amount of on-board memory, a hard disk or a certain screen resolution. If necessary, I may rewrite or add to this information in order to make the postings to the group more uniform. I can't check your submission in all possible configurations, and see what works and what doesn't. Without a description, your submission is likely to be rejected.

If possible, submit your binaries in a Zoo 2.1 archive. I will generally check that everything in the archive is OK and that the files in the archive make sense on an ordinary Atari ST system (i.e. they are MS-DOS style files), unless the archive is specifically intended for use with an alternative file system such as Minixfs. If necessary, I will re-pack the binaries using Zoo 2.1.

If you are submitting a demo of a commercial program, or a shareware program, please keep the amount of advertising to an absolute minimum. If you want to solicit orders, do it in a README file or an About... dialog box, not in a message that comes up every time the user does something. But feel free to post demo versions. Submissions which I feel are of an excessively commercial nature will not be posted.

THE STRUCTURE OF COMP.BINARIES.ATARI.ST ARTICLES

There are two types of articles in comp.binaries.atari.st: "information postings" and "binaries". The binary postings are also called "Issues". The postings of type 'announcement' (history has only known 1) are no more supported, as we now have a group comp.sys.atari.announce for those. The type of a posting can be distinguished by the subject line:

Subject: v06INF1: Introduction to comp.binaries.atari.st

This first word in the title identifies this as the first info posting of volume six. Similarly, the subject line shown below:

Subject: v20i081 (binary): deadwrtr -- Ouija-word processor part01/01

identifies this as the 81st issue in Volume 20, and it's a binary posting. Large programs are broken up into smaller pieces, and have subject lines that look like this:

Subject: v20i041 (binary): pet -- CBM PET emulator part04/39

The "References:" line, if present, points to the previous part of a multi- part program, so that newsreaders (trn, tin, nn, etc.) which can

follow threads will recognize a large program as a single thread.

The first few lines of an article's body are auxiliary headers that look like this:

```
Submitted-by: jackt@atari.com (Jack Tramiel)
Environment: high resolution, tt
Posting-number: Volume 19, Issue 80
Archive-name: rsn
Supersedes: atw: Volume 10, Issue 10-15
```

"Submitted by" is the author of the program. If you have comments about the binaries published in comp.binaries.atari.st this is the person to contact. When possible, this address is in domain form, otherwise it is a UUCP bang path relative to some major (backbone) site. This will usually be the same as the "From:" line in the article's main header.

Certain information about the system configuration required to use the program is given on the Environment: line.

```
Environment: 1meg, medium res, high res
```

This means that the program requires at least one meg of RAM and runs in medium or high resolution. Following is a list of keywords; new ones may be added as needed. They are mostly self-explanatory. Examples:

```
high - runs in high resolution (monochrome)
medium - runs in medium resolution
low - runs in low resolution
1meg - needs 1 meg of RAM
ste - requires an STe
tt - requires a TT
```

The "Posting-number:" line repeats the volume/issue information for the aid of notes sites and automatic archiving programs.

The "Archive-name:" is the "official" name of this program in the archive. Large postings will have names that look like this:

```
Archive-name: desktop/part01
```

The "Supersedes:" header line, if present, indicates that the program replaces an earlier version.

REPORTING AND TRACKING BUGS AND PATCHES TO POSTINGS

Updates to programs are usually announced in comp.sys.atari.st. When large changes are made to a program, the entire thing will be reposted to comp.binaries.atari.st.

To report bugs, contact the person listed in the Submitted-by header. Often there is a contact address in a README file, too. I do not maintain the programs I moderate, so don't send your bug reports to me.

If the program documentation mentions some file that isn't included in the posting (for instance, a font editor's documentation might refer to some sample fonts), contact the submitter, not me. I post articles in their entirety, so if it isn't posted, I probably don't have it.

HOW TO OBTAIN OLD ISSUES

There is currently no officially documented archive for this group.

678. v08INF5: Introduction to comp.sources.atari.st

Newsgroup: comp.sys.atari.st
Date: 1995-07-13 00:00:00 UTC
From: avg@cwi.nl
Message-ID: <DBnK8x.DFr@cwi.nl>
Source record: 162389
Cross-posted to: comp.sources.atari.st,comp.sys.atari.st

Submitted-by: avg@cwi.nl (Annius Groenink)
Posting-number: Volume 8, Info 5

This article is posted twice a month. It gives a short
introduction to comp.sources.atari.st and describes how to submit
sources or digressions to the group.

I am always looking for suggestions on how to improve the usefulness of
the newsgroup, and can be contacted at the following internet address:

avg@cwi.nl

Annius Groenink, Moderator.

ABOUT comp.sources.atari.st

The moderated usenet group comp.sources.atari.st contains publications
or announcements of sources and texts about programming for Atari TOS
computers. The publications on comp.sources.atari.st may be freely
distributed as long as modifications are documented and the original
authors are mentioned.

THIS IS A MODERATED GROUP. YOU CANNOT POST TO IT BY YOURSELF. Read the
instructions below for submitting material intended for publication on
comp.sources.atari.st.

SUBMITTING SOURCES OR DIGRESSIONS FOR PUBLICATION

Items intended for posting or queries and problem notes should be sent
to avg@cwi.nl. If you are on a UUCP-only site, you can send them to
uunet!cwi.nl!avg.

If you want verification of arrival, say so at the beginning of your
submission, or in a cover note. I try to verify that a program works,
and if I can't get it to work, I may hold up posting it for a couple of
days. Please note that, except in rare cases, software without
documentation will not be published. The backlog from receipt to posting
varies from one to four weeks depending mostly on the set of submissions
currently in my queue.

If you are submitting both sources and binaries, PLEASE send the two
separately. If I have to separate your sources from your binaries by
hand, your submission will most likely sit on the back burner for a

while, or be rejected outright.

Sources can be submitted in ASCII form, but for large pacages, a ZOO 2.1 archive encoded using Dumas uuencode is preferred.

Please include a description of your program at the top of your article. Look at old issues of comp.binaries.atari.st for examples of the sorts of descriptions I'm looking for. In general you should indicate what the program does, on what types of Atari TOS computers, whether your program requires a certain amount of on-board memory, a hard disk or a certain screen resolution. If necessary, I may rewrite or add to this information in order to make the postings to the group more uniform. I can't check your submission in all possible configurations, and see what works and what doesn't. Without a description, your submission is likely to be rejected.

THE STRUCTURE OF COMP.SOURCES.ATARI.ST ARTICLES

There are two types of articles in comp.binaries.atari.st: "information postings" and "sources". The source postings are also called "Issues". For a while, 'announcements' were also accepted, but there is now a dedicated group, comp.sys.atari.announce, for that purpose. The type of a posting can be distinguished by the subject line:

Subject: v02INF1: Introduction to comp.sources.atari.st

This first word in the title identifies this as the first info posting of volume two. Similarly, the subject line shown below:

Subject: v06i081: godsrc -- Universe simulator

identifies this as the 81st source article in Volume 6. Large sources are broken up into smaller pieces, and have subject lines that look like this:

Subject: v06i088: decbustr -- VMS clone in ST-LOGO, Part03/08

Certain information about the system configuration required to use the program is given on the keywords line.

Keywords: MWC, Megamax, 1meg, high

This means that the program compiles with Mark Williams or Megamax C, requires at least one meg of RAM and only runs in high resolution. Following is a list of keywords; new ones may be added as needed. They are mostly self- explanatory.

Alcyon - Alcyon C (included with Atari developer's kit)
MWC - Mark Williams C
Megamax - Megamax C
Laser - Laser C
Lattice - Lattice C
C - Any C compiler

OSS - OSS Personal Pascal
BASIC - ST BASIC (this is not a joke!)
uuencode - program is uuencoded (uudecode required to unpack)
arc - program is archived (arc required to unpack)
zoo-high - program is archived (Zoo 2.1 required to unpack)
lharc - program is archived (lharc required to unpack)
high - high resolution
medium - medium resolution
low - low resolution
1meg - needs 1 meg of RAM

The References: line, if present, points to the previous part of a multi-part program, so that newsreaders (trn, nn, etc.) which can follow threads will recognize a large program as a single thread.

The first few lines of an article are auxiliary headers that look like this:

Submitted-by: david@bdt.UUCP (David Beckmeyer)
Posting-number: Volume 6, Issue 80
Archive-name: micro-rtx

The "Submitted by" is the author of the program. If you have comments about the sources published in comp.sources.atari.st this is the person to contact. When possible, this address is in domain form, otherwise it is a UUCP bang path relative to some major (backbone) site.

The second line repeats the volume/issue information for the aide of notes sites and automatic archiving programs.

The Archive-name is the "official" name of this source in the archive. Large postings will have names that look like this:

Archive-name: desktop/part01

REPORTING AND TRACKING BUGS AND PATCHES TO POSTINGS

Most of the time, bugs and updates will be posted to comp.sys.atari.st. Sometimes, "official" updates from the author will be posted submitted to comp.sources.atari.st so that they are archived with the sources.

Since there is no easy way to apply source code patches on the ST, changes to a program often result in a whole new version being posted.

To report bugs, contact the person listed in the Submitted-to header. Often there is a contact address in a README file, too. I do not maintain the sources I moderate, so don't send your bug reports to me.

HOW TO OBTAIN OLD ISSUES

There is currently no officially documented archive for this group.

679. Re: New Mac-Emu for Atari

Newsgroup: comp.sys.atari.st
Date: 1995-07-13 00:00:00 UTC
From: h9250467@idefix.wu-wien.ac.at
Message-ID: <3u392a$irg@osiris.wu-wien.ac.at>
Source record: 162390

Well, the TT is a 68030 nachine with 32 Mhz, and if you take the
PowerMacintoshes there are still a lot of people using emulated code with
that machines, again equaling TT performance. You also do not have to
forget that there are thousands of Mac Plus, SE, Se/30 etc. owners out
there, who need and get support. It's been only two to three years
(actually less), that Apple switched solely to 68040 machines (the Times
of the LCIII and LC II machoines are not very far away).
Second, many people do not wish to buy a new machine right away; a 630?
with dying 680x0 CPUs; Power macintoshes, that do not provide CHRP?
Thirdly, many people are content withctheir current machine, but would
just like to have acess to some software, that does not exist, even if it
is an older, not up to date version that will run on a plain ST (think of
Excel 4 or Excel 3, earlier student versions of mathematica etc..., that
would do very well on a TT)
Yes, there is demand for such an emulator; and reading this thread should
be prove enough, regardless of the props and contras we discuss. And lats
do not forget, that with a godd Mac emulator, the Atari and Mac
plattforms will unite into a single platform, wheeras with MagicMac alone
it won't.

Regards,

Alfred

P.S: do not forget TT owners or ST owners, who buy a new MAC and keep
their ld Atari and still want to use ALL their software with these mahines.
(that would be me, for example, in one or two years)

In a previous article, foltin@cherokee.nsuok.edu (Bela Foltin)
wrote:

| Does someone know of any ballistics programs for the ST and how
| to obtain them, i.e. ftp, dealer etc.

Don't know of any, but of course, there would not be much calling
for a commercial program such as this for the ST, I reckon.

| I have some for the PC in Basic. Can these be run on the ST or do
| they need to be converted to Atari basic? Are there conversion
| tables or programs for doingsuch a thing?

Sorry, but you cannot run programs written for the PC on the Atari
for the same reason you cannot run Mac programs (without emulation).
The little bits of silicon inside the computers don't talk the
same language, at least above binary level they don't. ;-) And there
are no conversion programs for PC<=>Atari, either. That's why all
programmers are such highly paid professionals (cough, cough). :)

If you have the source code for the PC BASIC program you could use
that as a guide to write a similar code for the Atari, given you
have the tools and skills to do so, of course.

Source record: 162394

I would like to use my old atari for aquisition and processing of GC-Data.
The signal of the GC is between 0V and 1V and I need 2 samples per second.
and a resolution of 12 bit. I am sure that somebody has done this already
If so, please get in contact with me.

papke@chemie.uni-hamburg.de

> a legally acceptable thing to do? :-)

Yes. A sexual act involving two (or more:>) men is legal provided it
takes place between consenting adults, in private. For this purpose
"adult" means over 21. (For heterosexual acts it is 16 in England,
15 in Scotland: for female homosexuals there is no minimum age).

As luck would have it I just managed to get myself into this mess and back out again ... I was using BOOTCONF.PRG to make my Falcon boot up in mono, and one of my early attempts was distinctly $%^&ed up (bombs on bootup). In the end I think it was holding down Ctrl+Alt during bootup that got me a plain vanilla ST Med Res desktop, and from there I was able to run BOOTCONF again.

Had me worried though ...

:-

r> I'd like to be able to put my keyboard in my lap.

Err mine is. Try the Freekeys adaptor from Systems Solutions.

r> I'd like to be able to have physical tactile feedback on my keyboard,
r> instead of it feeling like half melted Jello and a sissy chip-click
r> from
r> the speaker.

See above.
Disconnect your speaker, its shite anyway. Plug in a good set of
speakers to the audio ports, they don't cost much and sound much better.
After all even the basic soundchip can generate sounds far superior to
the basic PC 'sound' chip (err bleeper, sorry).
If you are THAT desperate about the click noise, replace it with a
damned sample or something. There are loads of programs to do this for
you but personally I have it turned off, gets irritating after a while.

r> I'd like to be able to not have 4 foot deep desk just to be able to set

Set put your Falcon into a tower case, slam it under your desk, get the
keyboard and mouse on the desktop and stop complaining.

r> my monitor behind my falcon, instead of a nine mile long monitor
r> adapter

You can see your monitor 9 miles away from your Falcon? Christ, you
using point 9000 size fonts or something? ;-)

r> with lame blowup adapter hanging behind it. Thus ruining all hope of
r> comfortable use.

Blow-Up works quite well. Adaptor might be lame but who gives.

r> I'd like to be able to get at my mouse and joystick connectors without
r> having to make an expedition to China!

So buy a bloody extension cable then... gee must cost a massive five
quid. Or if you have the Freekeys thing don't worry any more.

r> I'd like to be able to use software that doesn't demand I switch to a
r> TV
r> mode (or SC1224 mode) just so I can see the damn thing! Flipping
r> cables
r> SUCKS!

Hardly anything does, unless you mean demos. Considering thats not
exactly what one would term as 'conventional' software you can't
complain. If the demo coders don't want to make their demo VGA, then
tough luck really. I can't think of any games that require RGB only
except perhaps a couple made by demo crews. (spot the link here?)

What software are you trying to use that needs a TV/RGB?

r> I wish my second serial port could actually serve a useful purpose!

Buy another modem, run your own BBS with two lines. Problem solved!

r> I wish I could actually install a decent internal hard drive, instead
r> of
r> a lame notebook, overpriced, with a connection nobody else uses
r> connector one! I wish that my 540Meg internal drive wouldn't have to
r> sit
r> outside, because the case is too damned small!

'lame'??? Hardly. Overpriced? Not exactly. Considering how many
Amiga owners and notebook owners need them they have come down in price
quite well. Shop around matey. And besides no-one uses an IDE only if
they want to expand.. they get a SCSI. And they are DIRT cheap.

r> I wish the Falcon's sound output minimum level wasn't set to jet-thrust
r> level and maximum wasn't at Mount St. Helens eruption "whisper" level!

Yeah well... you can't have everything...

r> Whew! I feel much better 8-)

:-)

If it narks you that much go buy a PC.
Then i'll give you a few months tops and you'll be regretting it.

s> A Lot of this stuff is NOT FALCON specific and the other is very
s> limmited to the average computer user.....

Define 'average computer user' please.

s> No we are not all Musos or Art people....

Then what are we? Programming? Get Devpac DSP (Falcon specific I think you'll find), BSS Debug, HiSoft Basic 2.10 with the Falcon and Speedo libraries. Games players? Get Ishar 1,2,3 (3 is VERY good), Robinsons Requiem, Stardust, Obsession, Llamazap, Humans, Road Riot, Steel Talons. Arty? Get Apex Media, Rainbow, Rainbow Multimedia, Delm Paint, Indy Paint, God Paint. Musical? Cubase Audio, WinRec, D2D, Digital Tracker. Utils? Atari Works with Speedo fonts & True Type fonts, Papyrus Gold, Calamus SL - maybe not Falcon exclusive but VERY much Falcon enhanced. Mpeg players? FLI/FLC players? GIF Viewers, JPEG viewers, Raytracing software (POV, Neon, Inshape 2), demos??

Have you EVER actually USED a Falcon Roger?

It certainly doesn't sound like it, or failing that the person demonstrating it did a lousy job.

Wake up, see the world, see the world of Atari. Small, tightly knit but pretty damn exciting. You are on the 'net, you've got support if you ask for it and software to download. The majority of Atari owners in the UK don't have net access. So stop moaning and think yourself lucky.

I am relatively new to ST`s so here are a couple of questions:

On a Mega ST4:
1/is there an internal clock which runs on backup battery when the machine is off?

2/what accessories/progs do I need to keep in the Auto folder on the hardrive in order to make sure files/folders are always correctly time-stamped?

3/Apart from "greeting",what is available for displaying a short text message at bootup?

All help gratefully received.
Steve.

696. Atari SW for sale/trade

Newsgroup: comp.sys.atari.st
Date: 1995-07-14 00:00:00 UTC
From: ai066@FreeNet.Carleton.CA
Message-ID: <DBpL43.549@freenet.carleton.ca>
Source record: 162257

I have the following that I can be persuaded to part with, prices are
suggested, please make an offer if you want something but can't afford it.

Heimdall: Graphic adventure/rpg, disks and docs, excellent! $15.00
Rings of Medusa: Fantasy war/trade/rpg disk + docs $7.50
Procopy: software disk copier, disk w docs on disk $4.00
Lotto File: lottery database/predictor disk only $4.00
North and South: graphic wargame, funny, disk only $5.00
Megatraveller one: Ultima style space RPG disks and docs $10.00
ALICE pascal: books and disk, $15.00
Dragon's Breath: Strategy/arcade/rpg disks and docs $7.50
PC Ditto: SW IBM XT emulator, runs DOS Prgs. disk and docs (slow) $7.50

All prices quoted in US$, and inlude 1st class air shipping. In trades,
I'm looking for: elite 2, Civilization, BAT 2, Lure of the Temptress,
Monkey Island, The Game Maker's Manual (book), HDDriver.

TTYL,

In response to RS :

I was responding to your "what is the point in a Club that is some 400 miles from me" remark. You seemed to naysay it just because it was "400 miles" away.

(By the way, NZ is a metric country. We changed over during 1973-1979 by gradually phasing out imperial, and phasing in metric. The distance from Auckland City to Wellington is 650 kilometres).

This is just a small-minded attitude that you were showing. "It's not in my neighbourhood, so it isn't worthwhile". At the time I wrote my followup, that was how I interpreted your comment. You were saying "it isn't local, so what use is it?". One can be a member (out-of-town, overseas, intergalactic...) of things, you know. Being a five minute walk from home may be handy, but rejecting it just because it is "400 miles" away is just dumb. Insular thinking such as this is not very productive.

Yes, I do know about Genie. I just didn't know it was accessible from NZ, (as someone else has posted here). Last time i looked, the nearest access point was Sydney in NZ's West Island.

In hindsight, I will admit that I had worded my followup badly - I gave you an opportunity to downgrade me and Atari Users in general.

In my defence, I must add the following : At the time I wrote my followup, however, I had just spent 20 or so hours non-stop staring at computer virus code (the author of which is due a fate worse than death, after I've found them and given them a good "shake by the throat"), which I had successfully disassembled, and gradually neutralising. Fully neutering the virus took a few hours longer. Dealing with the output of a deranged mind

for extended periods causes a somewhat skewed interpretation of things.

With regards to the "dumb" remark : From your poor spelling (USE A SPELL CHECKER WHEN YOU POST!), to lack of grammar (your incorrect use of homonyms is very telling), it would appear that you have a higher dumbness quotient than I have.

Have you ever written any code for the ST? Distributed software patches for the ST range (including TT and Falcon) which you have written yourself, and are used every day by many people? Implemented variable priority (selectable by the user at-any-time) into software? Written "uncrashable" multitasking software? Got around anti-debugging code in a piece of music software to find out _why_ it misbehaved when run on a TT?

I have done each of these things in the last three months. Each of these tasks require intelligence, mental dexterity and the ability to see a problem through to it's conclusion.

Do these traits define me as being "dumb"? I think not.

In fact, have you EVER said one good thing about the Atari?

Is your continual bad-mouthing of the Atari simply a way to ease your publicly-stated decision to buy a PoliticallyCorrect? Do you have to follow the trend of others by bad-mouthing something.

Or does it stem from the fact that, in a post of yours about a week ago, you mentioned you had a "520ST" (which, as you hadn't elaborated, must be assumed that it is an unexpanded half-megabyte model?) and would rather spend NZ$2000 buying a PoliticallyCorrect instead of NZ$350 to expand it to eight times that amount of RAM (8 times one-half megabyte equals four megabytes).

Or have you suddenly reached a point in your life where you feel totally inadequate, and must bolster up your pitiful ego by dismissing everyone else as inferior to you (...because they own Ataris and are therefore inferior to big, strong you)?

Perhaps you just like posting trolls, and seeing the responses come in?

Remember the old saying, "If you have nothing good to say, then say nothing". When responding to things Atari in a non-advocacy area, try to remember this.

So, I challenge you to say nothing bad about the Atari or it's users for one month.

>: Can I do this without trashing my D drive? I think so, but seeing
>: as my floppy doesnt work at all, I can't back-up to be safe.

Your ICD utilties package will do what you want, just make sure you
don't define ending sectors that exceed the start sector of the partition
you want to keep...

One problem, tho: in doing the above, you are going to overwrite the
boot sector of your current drive C: and that means you're gonna HAVE TO
boot from a floppy. Best get your floppy drive fixed first before you
create a headache.

From: eluag@leeds.ac.uk
Message-ID: <eluag.2.000D08D5@leeds.ac.uk>
Source record: 162262

Does anyone know where in the UK I can find a copy of AHDI ver.6.0.
I am currently using ver.5 and it works well with my modified HD.
Please don't send info on ICD drivers as my attempts to upgrade to ver.5 from
that stable caused no end of troubles.

Just for the the record the machine in question is an SH205 box with a
Miniscribe 3650 drive coupled to what I presume is it's original Atari
ACSI to SCSI board. The whole formats to 65 Meg in four partitions.

As I say, AHDI 5 has been OK, but the Mint and TAF kits
(my next suicidal projects ;)) recommend ver 6.
I have the 6.01 upgrade ready and waiting for the main body.

Any replies to eluag@leeds.ac.uk

: WITH A SIMPLE PIECE OF SOFTWARE IT'S POSSIBLE TO DISABLE THE ATARI (OR
: C-LAB?) FALCON IN A WAY THAT THE MACHINE CANNOT BE BROUGHT BACK TO LIFE WITHOUT
: A PHYSICAL (HARDWARE) FIX! RESETTING THE MACHINE, SWITCHING IT OFF AND ON,
: REMOVING THE HARDDISK ETC. DOES NOT HELP - THE BIRD IS DEAD.

UPDATE:

Connecting SM124 has no effect. No sign of life on screen, HD keeps
making weird noises (sounds like it's restarting continuously), diskdrive
is dead. All this because of the strange NVRAM configuration. Just to
remind you: with a tiny piece of software equal situation can be
caused on any Falcon (even yours).

I wish someone out there could contact an official Atari repairs company
(as we have none here in Finland) and ask for advice to externally reset
the NVRAM. I believe this information is of the uttermost importance for
all of us Falconists. (Not to mention that I should be doing my work
[entrirely based on Falcon specific code], which is impossible as my
Falcon does not work!!!)

Thanx for your time & attention.

LarryTee

>6) Disconnecting the hard drive and powering back on, the floppy works
>fine.
>7) The hard drive has nothing on it, and it is not set to autoboot, so I
>need to load AHDI from the floppy to partition it . . .

I found the same problem. After some frustration, I found a workaround:
1) (not essential, but makes life a lot easier) I fitted a 2-gang on-off
switch in the 5- & 12-volt power supply to the IDE drive, mounted
on the back of the case (Desktopper). Now I can run my Falcon with
the lid on.
2) Install a reset-proof RAMdisc- I use the one with Harlekin 2 (cover
disk, Atari ST Review issue 34).
3) IDE drive off, boot up from floppy, install RPRD (1.44MB if you can
spare the RAM) & copy AHDI or whichever driver you use, TOGETHER
WITH HARLEKIN to the RPRD.
4) IDE drive on, run AHDI from the RPRD. Floppy is now "possibly
damaged". Run 'Install devices' from desktop, & it should show
icons for each partition on your IDE.
5) Install software from the RPRD onto your IDE, and away you go!
(you need a RPRD driver on your IDE if you want to pass stuff out
to a floppy- reverse the above)
It appears that virtual hard drives (reset-proof RAM disks, LittleNet
etc.) are immune to whatever it is. I use ICD Pro drivers and utilities
which give the same effect. With the SCSI drives from my old ST
plugged in as well as the IDE, ICD Pro driver will recognise them, and
transfer files- up to a maximum size of 16KBytes! Any file larger than
that is flagged as 'possibly damaged'.
LittleNet (ST Format subscriber's disk 69) enables you to connect two
Ataris via the MIDI ports. I moved 65MB from my old SCSI drives to the
IDE by sending it via a STacey in 15-16MB chunks over LittleNet.

It would still be handy to be able to use the floppy drive without all
this hassle though.

I remember this part quite distinctly, first you don't have to put
the gem back because I took it & never needed to use it, you see
there were alot of extra dead-ends so to speak added to the game,
you have found one of them. I finished the game without opening alot
of doors, because alot of them are just to make you run out of food,
& water... So forget it & keep going...

P.s. If you want to see the ending I'll upload the *.sav file so you
can see it...

Michael Farrell

S > addicts here...

Once again, Roger - POT/KETTLE/BLACK.

And as for "dumb" people on this conference - I suggest looking in the mirror in the morning when you shave for the dumbest one of all (or at least the most misanthropic). (You might also ask Sinclap to mail you his picture for a good glimpse at #2, and Grubby the Pirate for #3.....) :)

And quit knocking Brian around. Unlike you, he is obviously doing much to improve the lot of the average New Zealand Atari owner, and I commend him for that. It may not be all strawberries and milk for Atari users these days, but he and the other club members are obviously dedicated to keeping the platform useful and fun to use in NZ- much as TAF has done the same for the Toronto Atarians and beyond (I've seen his newsletter, BTW, and he's definitely heading towards the right track IMHO). Better that than your whining, complaining, disinformation-spewing, and paranoid fantasies about "snotty, STOS-using teenagers" that does nothing to further the usefulness of this conference.

Go and buy your bloody PC. Then GET THE HELL OUT OF THIS CONFERENCE - and give the guys in the PC conferences something to laugh at. :)

For those vendors and developers not attending, here is info on placing ads in the show guide:

AUNT will be publishing a small|format (8.5 X 5.5) Program Guide for the DEUCE show. The main purpose will be to provide ad space for Atari|related product dealers and software publishers. Due to the rules of the D/FW XChange, these ads will be AUNT's only source of income from the show. You need not be a show participant to advertise in the Guide, any Atari|related advertising or advertising from companies marketting Atari products will be accepted.

All ads will be monochrome (black & white). The advertising rates will be the same per square inch as the new lower rates charged for ads in our monthly newsletter ~ AUNT BYTES:

11 X 8.5 double page $12.00 US
5.5 X 8.5 single page $7.00 US
5.5 X 4.25 half page $4.00 US

Pages will have .25" margins all around, but double|page ads need not allow for a center margin. Ad copy can be submitted "camera ready" for paste|up or in a number of digital formats including:

Calamus(1.09, SL, NT) PageStream

1st Word, 1st Word+, Word Writer ASCII Text
RTF (AtariWorks or ANSI) WordPerfect

714. Sinclap is AMAZING!!!

Newsgroup: comp.sys.atari.st
Date: 1995-07-14 00:00:00 UTC
From: fkeylard@on-ramp.ior.com
Message-ID: <3u54mr$cs7@express.ior.com>
Source record: 162275

Sinclap is amazingly persistent in his anti Atari crusade.

Never before have I had the "honor" to witness such dogged determinance. I am interested in Ataris and consider myself to be quite mobile in the on-line Atari world.
This is natural, I have a Jaguar and am still missing my TT030. I have a legitimate reason to want to check up on these things. I do not have a Mac or 3DO, for example. Therefore I wouldn't have any reason to ever go to those newsgroups, let alone post anything there. EVER.
I simply have no reason to do this, nor do I have the time. If I were planning on buying one, only then would I check up on such things.

I know this flies in the face of science, but let's use me as a baseline of normalcy for the purpose of this test. I can do this because I can corroborate its basic validity with several friends. For the purpose and scope of this experiment, it will do.
Now place Sinclap in this newly created model. See how he appears to be in a different dimension altogether? This is a phonomenon that defies any logic or laws of sanity known to man.

Sinclap's only claim to fame is that he does NOT have anything bearing the Atari symbol on it. Yet this is enough for him to waste countless hours each day pursuing the slightest mention of Atari anywhere on the net. Here I go to this obscure stocks channel, only to find him bad-mouthing someone's tip to buy Atari stock. Then I run in to him on the Jaguar-list, and just about everywhere else I turn. Then I come to this newsgroup for the first time in quite a while, and there he is again! Naturally he's up to his same old tricks.

This leaves me with some questions:

1) Is Sinclap an automated artificial un-intelligent anti-Atari drone, programmed to scour the net endlessly in search of all favorable Atari statements? Upon finding such statements he launches a randomized set of responses cued by certain key-words in the post?

2) Is he the product of some disease ridden community where
- close relatives are allowed to procreate?
- secret radiation tests are being carried out on the population?
- pregnant women are abusing controlled substances?

3) What does he hope to gain by doing what he does? Does he realize that he causes people to never want to get Mac's because the stigma of having him as a best buddy is simply too daunting?

4) Do they allow mental ward inmates to use computers in a new form of patient pacification?

5) Has anybody documented the Sinclap phenomenon in the field of Psychology? What is his affliction called?

Preliminary Conclusion:

If I ever threaten to become as mentally warped as Sinclap, I sure hope people will tell me that I am wading into the deep end, before it's too late. I hope I'll be able to interpret the flames before it's too late.
Sinclap on the other hand is beyond redemption, even with years of counselling he will never be able to hold a responsible position in society.

I pity him...

Frans.

PILOT (Programmed Instruction Learning Or Teaching?) was Atari's
predecessor to Logo. Logo was indeed available on the 8-bit series. The
implementation was reportedly excellent and was rather popular with schools
here.

TA>used on >the Mac and PC - well I've tried it and so far it doesnt seem
TA>100% true!

NVDI 3.02 includes a font checker.
You can disable the font checker as written in NVDI's readme so all these fonts
without ID (for example) are able to be used on your Atari.

This won't work. You have to 'gunzip' it first and the 'detar' it. Or
you might get the GNU version of tar and do both in one using tar's z
switch (see my previous post).

>Someone told me that it is possible to attach SCSI-Harddisks on a
>Atari 1040ST computer. Who knows more about it and help me ?

You need a DMA/SCSI-Adaptor. ;-)

Buy one of many Atari-SCSI-Host-Adaptors. Connect this Part to your 1040ST
DMA-Port and connect your new SCSI-Harddisk too with 50Pin SCSI-FlatKable
to this Adaptor. Use new SCSI-Devicedrivers! (Software)

Call your lokal Atari-Dealer :)

Look at this Circuit: (My old 520ST)

(19Pin) (Vantage by Hard&Soft/Germany) (50Wire SCSI)
ST -> DMAPort --Wire--------> SCSIHost-Adaptor-----------Wire------->

(105Meg Quantum SCSI) = 210Mb Harddisk
>---------->Device 0 ----->Device 1--Term.

(Last SCSI-Device must be Terminated!!)
It is shown in the SCSI-Adaptor Manual....

First Step: Read this f(ine).. :) manual :-))
Second: Connect your Hardware !!!

Partlist:
1 DMA/SCSI Adaptor (inc. Devicedriver)
1 Manual :)
1 19Pin DMA-Kable (Wired to SCSI-Adaptor)
1 50Pin SCSI-Bus-FlatKable (Wired to your SCSI-Drive)
1 PowerSupply for your new Drive

Good look! :)

best regards
Robert (with very bad school-english..) (sorry) ;-)

.tgz files are TARed, and then GNU-Zipped. You will need two programs.
First is DETAR.TTP to De-TAR the archive, and then you'll need GZIP. You
can uncompres these files online on a Unix shell account by typing:

tar -xvf filename.tgz

Then, to Gnu-UnZIP them, type:

gunzip filename.gz

However, both TAR/DETAR and Gnu-ZIP are available for the Atari line and
should be avilable on most Atari FTP sites in the archivers section.
: them.

You need GNUtar ang GNUzip, both available at the common atari
sites. Then you can uncompress foo.tgz (which ist short for
foo.tar.gz) by

tar xzf foo.tgz

| : all that brilliantly with MiNT. Anyway I failed to get Chimera to run
| : with VRAM, sh crashed during X initialisation. (Remind me to find out
|
: what causes sh to be run and see if it wouldn't be possible to use init;
| : that should save on RAM).

| I am greatly interested in any virtual RAM system for the Falcon. I assume
| these are commercial products? Where can I get info from (and hopefully
| a dealer in the USA!)

The stock answer to such questions is "try Toad", so I won't repeat it
here. :) SFAIK VRAM is no longer supported (just my luck), but Outside
is still available.

| Regarding your X crashing, just INIT=xinit or INIT=startx. Then you don't
| need sh. Altho, sh probably doesn't take up that much memory. Only
| problem with this is you cannot get OUT of X. You can shutdown the
| server, and depending on the state of things, the machine will crash
| or standard TOS will start.

I already have INIT=xinit, but xinit is calling sh ... if I run top
using xvt -e /bin/top, I see two copies of sh running: one is a child
of xinit, the other of xvt. That sort of thing is fine if you have vm,
but a cruel waste of RAM if you don't. (BTW each sh is about 80KB, so
I agree that it's not such a big deal in practice).

| btw: I have 16mb of RAM, and outside of sluggishness, Chimera/X/etc
| all work fine...

Lucky bastard.

I use a Mac emulator (Spectre GCR 3.0) under System 6.0.8 on a T25 (25mhz 68000) almost every day (and on a graphics board). It is plenty fast as long as you know what Mac softare to use. Write Now, for instance, still runs well even at 8mhz! I for one would purchase a new Mac Emulator if it supports my CPU, but there is no way I would replace my CPU at this point, the 25mhz 68000 is all I need for ST software and Mac software - if something already does 100% of what you need, then why upgrade?

Just my 2cents worth...

Message-ID: <3u6753$l22@epsilon.qmw.ac.uk>
Source record: 162346

On A.I.Nicholls@herts.ac.uk, Alex Nicholls (A.I.Nicholls@herts.ac.uk) typed away:
: I don't know if it's just me, but ST Format just increased its cover price by
: about 40% and decreased the amount of pages it was printing saying it was
: due to a shortage in world wide paper. Also saying that other magazines would
: raise there prices too...

: But I haven't seen that happening at all... and what about the weekly
: periodicals like TV Guides? they don't seem to have changed there prices!

To be fair to STF, i would like to say the following...

Look at STF carefully, and you will see that the word count per page
has gone up... I could tell straight away. So even though number of
pages has gone down, editorial size hasn't (by much!)

STF is the first mag to go down in size... others will follow. I don't
think Amiga Format will, and other premier mags such as .Net etc
won't, as they are already raking in loads of money. But there are
Future titles which will decrease in size in the next couple of
months. Heck, Amiga Format sells in the hundreds of thousands,
compared to an ST title.

Cover price has gone up, due to shortage of paper.. this is true, and
you will notice that newspapaers have gone up by 5 to 10 pence
too. All magazines will be putting up their prices.

Atari World is already at the A4 size...

The Atari market is too small for a mag to go in a loss for a couple
of months. Having the mags at this size means reduced costs, and extra
life for the magazines concerned.

Finally, support the Atari market... buy both Atari World and ST
Format.

[remainder deleted]

Jan, this is a bunch of really good info for Portfolio users and is bound to be of great help and interest to them. Nice job!

However... since this is comp.sys.atari.st perhaps it's not the best place to post it. It wouldn't be such a big deal if it was a short post, but this one was rather lengthy. Since many folks have to PAY for their internet access and depending on the software they use, might not have the choice but to have to download all new articles, they might not appreciate having to slog through a long, off-topic discussion.

I would suggest, and this is only a suggestion, that when you have a new issue of 'Portfolio News' to release, you post an announcement here to let people know how/where they can get a copy of it. Perhaps you could include the index, as well. This way those that are interested can get the newsletter without offending those that could care less.

Or you could establish a comp.sys.atari.portfolio newsgroup but there might not be enough demand for it. Who knows?

Anyway, just a suggestion, not a flame, OK?

-Hutch- @ Fair Dinkum Tech

So, you equate a list of the positive things Atari-wise that I have done as "self pity drivel"?

What positive things Atari-wise have you done in the last three months? (Other than criticise the Atari hardware, it's users, people who differ in opinion to yours...)

Also, you have failed to give a reason for your continued harping on the "Atari is crud" ideology.

The hardware meets my needs, those of my acquaintances, numerous Atarians worldwide, and will continue doing so for quite a while.

If it meets the needs of so many people, then the notion that it is "crud" is false.

>>So, I challenge you to say nothing bad about the Atari or it's users for
>>one month.

> Another Atari Bigot that thinks he is above every one else, gee I do hope
> you can sleep at nights, or is the Bed no Big enough for you Head....

(Bigot: n. a person convinced of the rightness of one particular creed, opinion, practice)

I am not an "Atari Bigot". If a particular application is best suited to another platform, I will say so. That is not the mark of a bigot. For extreme scientific applications I will point people to the workstation market, pre-press to the Macintosh, games playing to the PC.

I wasn't trying to say that I was "above every one else". That was YOUR interpretation. I was trying to prove firstly that your crack about "dumbness being a requirement of Atari Users" was a complete and utter lie. You have yet to prove that your blanket statement about _all_ Atarians being "dumb". I am living proof to the contrary. Likewise NASA researchers, numerous musicians, and some Taligent staff, who, let it be known, all use Ataris on a regular basis. I seriously doubt they would be classed as "dumb".

Actually, I do not sleep nights. I use that time to initiate supplicants into the wonderful world of the undead. :)

> I also challenge you to stop being a Big head and a Bigot...!!!

Yes, the size of my cranial structure is a little larger than normal, but I do not brag about it. (Contrary to popular misconception, it's really the size of the cranium that drives the ladies wild - yippeee!)

For someone who likes pointing the finger and saying "Bigot", _YOU_ are showing all the classic signs of being one.

736. For Sale Atari 1040 ST

>and GEnie. Not very friendly to their customers, but that's business
>for ya....

The "semi-commercial" files and upgrades are also available on Delphi
and CompuServe. I don't have a problem with the upgrades being limited
to the online services and ICD's support BBS. A phone call to the BBS
is likely cheaper than buying the disk(s) direct. <g>

An incredible thought just occurred to me!
What if Sinclap and The Unabomber are the same person! Think of it! The Unabomber is against technology, and what was one of the first companies to become famous and develope a household name with advanced computer technology? I mean, everyone used to use the name "Atari" to mean video games right? "Atari" was a household word at one time! What if Sinclap/Unabomber has this thing against technology, like a love-hate sort of thing... He/she/it understands computers and technology but at the same time is afraid of it. I think Atari would be the logical choice to hate and pick on.

Just a thought...

I have been looking up words in a dictionary. Here are some
interesting examples:

dumb--

^^^^^^^^^^ ^^^^^^^^^
^^^^^^^^^^^^^^^^^^
=========
=======
+++++
~~~
selah @ccnet.com

fool--

^^^^^^^^^^ ^^^^^^^^^
^^^^^^^^^^^^^^^^^^
=========
=======
+++++
~~~
selah @ccnet.com

idiot--

^^^^^^^^^^ ^^^^^^^^^
^^^^^^^^^^^^^^^^^^
=========
=======
+++++
~~~
selah @ccnet.com

stupid--

^^^^^^^^^^ ^^^^^^^^^
^^^^^^^^^^^^^^^^^^
=========
=======
+++++
~~~
selah @ccnet.com

This is a very new dicitonary. It may not have a very large distribution,
at this time. But I think it has potential!

Alex Nicholls (A.I.Nicholls@herts.ac.uk) wrote:
: I don't know if it's just me, but ST Format just increased its cover price by
: about 40% and decreased the amount of pages it was printing saying it was
: due to a shortage in world wide paper. Also saying that other magazines would
: raise there prices too...

: But I haven't seen that happening at all... and what about the weekly
: periodicals like TV Guides? they don't seem to have changed there prices!

I think it is just declining ad revenue and sales. Almost every
Atari magazine I have read (ANTIC,ST-Log,Analog,Start,etc) had shrunk in
size and been printed on cheaper paper before it folded. Of course
each magazine has its reasons for doing so: "..re-evaluation of our
magazine...", "....our new format..," "...temporary experiment in magazine
size..." etc. And: "..But we'll continue to give you the best information
on the Atari world...blah, blah."

The index of advertisers looks just as long, but they use a larger
typeface to hide the fact that there are less advertisers in the mag.

Of course, they won't tell you this; otherwise it would make it
a lame duck magazine.

But yeah, I've noticed the shrinking number of pages. The smaller
size doesn't bode well either.

Does anyone know if STF supports itself, or does it receive help
from Future's various other publications? If it does, STF may be able
to operate at a loss for awhile until renewed interest is developed
in Atari machines (from who/where/what, I don't know! :))

Amiga Format, Amiga Power, Amiga Shopper, and Amiga Action all
remained in publication while Commodore was out of it (They're Baaaaaack..)
so who knows?

Well did I say Cheap NO WAY...

All I can say is I told you so..

The New Mk.I 4 meg No HD Falcons by C-Labs are 799 Pounds
or $999us ..

This is even dearer that when Atari first brought them out,
the price listed in a 1994 UK mag was 699 pounds...

Nothing ever come cheap out of Germany....

All I can say this is the Death of the Falcon, long live the PC....

>2.06 formatter for this.

Fcopy does have a Intelegent Format option, is this turned On..??

If so it only clears the Fat and Directory, some Formaters
do leave data in the boot sector, even Atari does this...

Data in the boot sector does not matter, as long as their is no
Virus in it, this can easly be stoped by changing the 60 (1st Byte) if its
their to 00, and if its not a virus but a valid boot sector back to the 60..

SW>access
SW>running on an STe with a 14.4K modem?

MiNT, MiNT-Net and the clients you need.

SW>I've got a 35meg hard-drive

You should buy a bigger one for networking applications.

SW>I'd like to avoid using MiNT if at all possible

MiNT-Net is the best TCP/IP platform on the ST.

SW>which would obviously be _better_, but would it be _necessary_?

It wouldn't be _absolutely_ necessary, but if you also want to install
X11R5 you need at least 4MB to make it work.

I used some HD disks in my archive cycle. Normally I don't have to access these again but recently I lost a file and had to go back to try to find it. The archive had been made about 3 months previously and I found that the HD disks behaved as though they were empty!! A bit of FADE!

It's a two stage process - first you unzip it with CTAR.TTP and then unpack the .tar file with DETAR.TTP. You get both progs. in a package known as STTAR.ZIP(LZH).

When I try to ping my TT on the net address I gave it, it says "Network unreachable".
I try to add my machine to it's own routing table and I get "Network unreachable". I can ping to the Loopback port 127.0.0.1 fine, but cannot ping 100.0.0.1.

Next, when I connect to the Net, I get in OK, but I cannot FTP/TELNET/PING anything other than my own system (Which mysteriously gains the ability to ping itself at 100.0.0.1, even though no data is going over the modem to CIS.) However, attempting to ping compuserve fails. Attempting to ping umich fails. Data goes out over the modem, but no data ever comes back. What am I doing wrong?

Ehrmm, I downloaded st_term and tried it. It's *not* very useful as a real
DEC vt-100. The docs mentions it's shortcomings. Read 'em. So far the only
thing that works for me is (you guessed it) Uniterm.

A small point a number of STE's are fitted with HD drives and they can use DD disks..

Check to see if 2 disk detect pins are showing in the fon't of the drive, they are just inside the flap, one is for disk in and the other for DD detect...

One small question, where did you find Chimera? I read about it recently
but couldn't seem to find it anywhere....

If this has been answered before, sorry, I've been away from the Atari net
scene for 2 years and I'm a bit behind!!!

Cheers, Gary..

: What are HQX Files...???

Mac files encoded as BinHex4 format. You need a mac utility like compact pro
or Unstuffit to decode em.

```
: It's SLIP based, AFAIK, so you would need a SLIP setup. It requires
: 640x400 minimum (an X-Windows requirement) and runs under the MiNT
: operating system, which it comes will. You will need a completely blank
: partition due to the MiNTfs (file system) formatted to perhaps 16 megs or
: more. There should be no TOS incompatibilities.

All of the above is true.....HOWEVER..... after installing it all on a 20meg
partition of my HD, and running it perfectly, I found one slight problem
on my 4meg STe......I dont have enough RAM to be able to run CHIMERA if
a WEB page has any Gif images 10k or bigger. BANG!!! CRAASSSHHHH!
Chimera crashes with the biggest thud you have seen 8-)

I suppose its a bit much to have Mint Net, X-Windows AND Chimera all
running at the same time and then expecting graphics intensive Web pages
to display as well, and all with only 4 meg. At least i tried....8-(

: No. But when I see inaccuracies posted about the Mac, than I will set the
: record straight. I never owned an ST, just Amigas. However, I own a Lynx, 7800
: and 2600..

WOW!!!! with credentials like that it obviously makes you a real authority
on Atari computers.

As for mac's, well, all i can say is that on the music side, i recently
HAD to use 2 different macs running Notator Logic 2.02 and I was
absolutely astonished as to how sssllllooooowwww the macs were compared to
what i have been used to with Notator SL on my trusty old STe. One was a
Centris and the other was a Performer. I dont know where they stand in the
mac scheme of things, but their performance didnt make me want to rush out
and buy a mac. Then again after all the mac extolling by mac users maybe i
was expecting a "WUNDER MACHINE".

C> you should probably dump Basic and get yourself a nice C compiler...

Stick with HiSoft Basic 2.10 with the Falcon and Speedo libs.
You'll not get any speed increase with C, only more headaches if anything.
As for GFA, it can be used for Falcon applications perfectly. Delm Paint is a True Colour art package for Falcon as is Indy Paint, both are GFA. I've even seen a few Falcon demos written in GFA and some games. If you know what you are doing just about ANY language can be adapted for the Falcon to take advantage of it.

It was none other than David D. Hagood who did write on 16 Jul 95 that ....
DDH> Organization: via CompuServe Information Service
DDH> Next, when I connect to the Net, I get in OK, but I cannot
DDH> FTP/TELNET/PING anything
DDH> other than my own system (Which mysteriously gains the ability to
DDH> ping itself at
DDH> 100.0.0.1, even though no data is going over the modem to CIS.)
DDH> However, attempting to ping
DDH> compuserve fails. Attempting to ping umich fails. Data goes out
DDH> over the modem,
DDH> but no data ever comes back. What am I doing wrong?

same problem I am working at . I can only reach (ping/ftp etc) the sites
listed in my local host.conf .
I think it is down to having the correct nameserver in your resolv.conf.
From my understanding this has to be a specific server and not neccessarily
the one you physically attach the slip line to.
(and it also has to be in your host.conf)

Sh*t..! I was afraid that might happen... Apparently, some servers have
access to mausnet, and others don't =-(. Maybe some mail to your e-mail
server's system personnel might help. This is a very important newsgroup
to all us Atari owners, I think. Or: there are at least 4 mausnet Atari
newsgroups - and all of them are very interesting (newest products
reviewed, etc)!

Maybe someone reading this group (and who has access to mausnet) could
forward the original question there? I can't do that, though I'd like to
help.. I'll probably lose my mausnet access in near future, too, because
I'll lose this e-mail address.

It appeares the reason that not as many magazines went up in price is that they buy there paper in bulk so they were not caught in the price rises. Also remember ST Format is not one of Future Publishing's bigger mags so along with the price rise the magazine said it was going down in size to A4.

As long as the magazine doesn't dissappear and the price doesn't go up much further I'll continue to subscribe for the time being.

I don't know if they ever brought this out, but I read in a magazine that they
updated the Atari version to the same as the PC version with 16 colours,
the Atari version only had 8 colours...

The magazine was stating that you could send your disk back to Brouderbond
and get the latest 16 colur version...

Well, I figured out my problem. The trick is to set the PPP options so that the PPP daemon will set the local IP address as well as the IP address of the end point of the link. Failure to to that will cause the link to be one-way.

Now, can someone tell me:
1) Where can I get TIN, the newsreader for the ST
2) Are there any replacement serial port devices for the TT that support direct setting of the serial port to baud rates above 19.2K?
3) Is the TAF distribution of the Chimera brouser set up with the correct URL's? I cannot seem to get it to go online, even though I can now FTP.
4) Has anyone done an X server that simply translates the X commands into GEM AES/VDI calls? This would allow X applications to co-exist with GEM, allow X to benefit from enhanced res boards, speedups from NVDI, etc. Having to choose between X or GEM sucks!
5) Does anyone know how to mount a file system under the NFS system? I have seen that certain sites allow AFS access to their files, and I assume (possably incorrectly) that NFS and AFS are related.

I don't know how easily it will compile on the Atari but tin can be found at
ftp.demon.co.uk:/pub/unix/news/tin IIRC. Perhaps there is a hacked source
around that will compile easily for the Atari..

> 5) Does anyone know how to mount a file system under the NFS system? I have

You have an /etc/exports for directories that are exported on your system, I
can't remember the syntax, 'man exports' perhaps. :-)

When you want to mount you do for example:

mount nfs_server:/exported_dir /mount_point

Make sure you have created a directory on your system to mount onto, eg.
/mount_point in this case.

As I said, you should be able to work this out by looking at the man pages,
ie. 'man mount'.

> seen that certain sites allow AFS access to their files, and I assume
> (possably incorrectly) that NFS and AFS are related.

AFS is Andrew File System, an enhanced version of NFS (Network File System)
developed at Carnegie Melon (sp?) University. I think most of the
enhancements were centered around security.

And yes, you can NFS mount src.doc.ic.ac.uk

From: sheppard_r@ix.wcc.govt.nz
Message-ID: <3uauma$kun@golem.wcc.govt.nz>
Source record: 162164

Well from what I have found out to get a Complete set of Atari HD Disk Utils,
you will need to get HDX 503c, HDX 504 and AHDI6061..

I did read on GEnie that AHDI 6061 was a Hack, well the one that I found
was not the same as AHDI 6.05c, but 6.05c was the same as 6.06..

The AHDI 6061 that was on GEnie was removed because of this....

From what I have found out and from the Posting on GEnie,
Ataries HDX/AHDI is a load of Rubish, it would be far better to get
the ICD Utils, they leave Atari stuff for dead....

The solder contacts refer to the TOS ROM's. The TOS can be programmed into either 2 x 1M (E)PROMS or into 6 x 256k (E)PROMS. You should only need to change these switches if you upgrade or change the number of your TOS ROMs.
There is a file on atari.umich (and mirrors) outlining what you need to do to upgrade your ST ram. You will need 3 x 47 ohm (or thereabouts) to be soldered onto your board (around about R70 on the board, its fairly obvious when you know where to look) to bring the second bank of memory on-line.
The capacitors can be 0.1uF (i.e the flattish ones with 104 written on them indicating 10 followed by 4 zeroes in pF i.e. 100000 pF).
I've upgraded a couple of STFMs using SIPs and most of my info was taken from this file. If you have difficulty getting it I can email it to you.

Back in 86/87 when I bought my first ST I had an expensive colour TV that
wouldn't handle 60Hz yet the cheaper one would. The cheaper one had a pot a
twek but the expensive was all automatic. :(

>Jul 10 16:23:54 homer pppd[26]: exit

The TAF setup expects a dynamic PPP ip address allocation. This "homer" (ip
address 100.0.0.1) is not your domain name (chowgar).

Edit the "hosts" "host" and "hostname" files in /etc/ to reflect your
informaition. Also edit /etc/resolv.conf to define demons nameserver (what
ever it is).

>does anybody know why this is happening, I'm looking forward to using
>Chimera, it look great.

Despite installing 9wm here as a more memory efficient X-windows manager I
still have chimera fold up on me after about 60 seconds of use. There are no
syslogd messages so I've no idea what going wrong...

Having now got MiNT/MiNT-Net working with TOSWIN14W12 I'm happier using Lynx
IRC/GOPHER/NCFTP etc anyway... ;-)

Anyone know of a mail/news package for MiNT/MiNT-Net?

From: smoore@chowgar.demon.co.uk
Message-ID: <805903426_OASIS_@chowgar.demon.co.uk>
Source record: 162173

Hello there

just a couple of questions regarding the TAF disks setup.

1 - Is there any way I can disable ftp, telnet, and the ftp archive that
would free up some memory? Even with just MiNT and HSmodem in my
auto folder I don't have enough memory to display most of the pages
I want to visit whilst in Chimera.

2 - Is there a screen resolution expander for my Falcon that will work
with MiNT and let me increase the resolution of my SVGA in 2 colours?
I use Blow-Up at the minute and I know that that works with MiNT but
it only works properly on my SVGA in 16 and 256 colours.

Cheers.

I have not studied psychology (except a couple low-level courses required
in college and high school) but Petey Sinclair's behaviour can safely be
considered OBSESSIVE. Childhood trauma? Learned prejudice? Perhaps he just
bears a grudge more recently in life, for instance maybe his cat/dog/whatever
was accidently run over by a delivery van from a local Atari computer store.
What ever it is, it is simply an unnatural way to be, and he really should
seek professional help so that he can get over whatever it is that has
scarred him so badly as to take aim at a distant and blameless entity such
as Atari.

```
Now, as far as the name server stuff... I am still working on this.
I found one of my problems: You MUST set the options for the PPP daemon to
set the IP address of both the far end system and the local system. If you use
the hard coded address that is commonly shown on the example files, you will
fail miserably: packets that are being sent to your machine will instead end
up at some other machine.
#
# /etc/ppp/options -- global options to pppd.
#
crtscts # Use handshake lines
asyncmap 0 # don't escape any charaters from '\x00' to '\x1f'
mru 1500 # set maximum receive unit to 1500 bytes
mtu 1500 # set maximum transmit unit to 1500 bytes
defaultroute # add defaultroute over ppp?
ipcp-accept-local # if CIS gives us a local IP address, use it
ipcp-accept-remote # if CIS gives us a remote IP address, use it

825. Atari Software for Sale

Newsgroup: comp.sys.atari.st
Date: 1995-07-16 00:00:00 UTC
From: brianj@wantabe.com
Message-ID: <3ubf2q$jbl@tattoo.sccsi.com>
Source record: 162182

I have a wide range of Atari ST software for sale. All software is original and in most cases with original docs and packaging.

Wordperfect for the Atari ST $20.00
GFA Basic 3.0 by MichTron $15.00
Regent Base II relational database $15.00
dBMan V database by Versasoft $15.00
TurboST by Softrek $10.00
DataManager ST by Timeworks $10.00
The Juggler by Michtron $10.00
Mark Williams C $15.00
Cyber Studio CAD-3D $10.00
Flash 1.6 $10.00

Hunt for Red October $7.50
Universe II $10.00
Conqueror $10.00
Omega $10.00
Elite $10.00
The Bards Tale $10.00
Silent Service $10.00
Gauntlet $10.00
Tetris $10.00
Virus $10.00
Bloodwych $10.00
Carrier Command $10.00
Paladin $10.00
Rogue $10.00
Test Drive $10.00
Starglider $10.00
Flight Command 6 disk set
Lancaster
Strike Force Harrier
Skyfox II
Skychase
Sliminator $15.00
Combat Course $10.00
Defender of the Crown $10.00
Space Quest III $10.00
Midwinter $10.00
Hacker II $5.00
Drakken $10.00
Falcon with mission disk $15.00
Flight Sim II with hawaii disk $15.00
Dragons Breath $10.00

Terrorpods $10.00
Empire 2.05 $10.00
Major Motion $5.00
Dungeon Master $10.00
Dungeon Master II $10.00 (DM I and II for $15,00)
Manhunter $10.00
Questron II $5.00
Ferrari Formula One $10.00
Universal Military Simulator $10.00
Captain Blood $10.00
Oids $10.00
Middle Earth $10.00
North and South $10.00
Annals of Rome $5.00
Arnea $5.00
Roadwar Europa $5.00
Airball $5.00
Shadowgate $10.00

I also have the following disk set
9 disks from ST Action
1 from ST Log
1 from Diskmate
8 disks from STart Magazine
7 disks from Atari ST User
1 from ST Format $20.00

Finally I have an unbuilt STonhenge RAM Drive for the Atari ST. It is capable of adding a 8 meg ram drive to any ST. This kit comes with every part except the memory chips. $35.00

If you are interested in any of the above items, please send e-mail to...

steele@wolfe.net wrote:
: Atari ST CD-ROM
: ---------------
: CD-ROM for sale -- only one available, a master copy -- that was going to be
: used commercially but the ST market crapped out. It cost about $350 to produce,
: will sell for $100 or best offer. Includes the best PD that was ever released
: for the ST (over 480 megabytes worth).

Oh come on now... $100. The price of writing CDs is getting cheaper each
day. The latest advertised price I saw was $60.00 (Australian) to write a
CD and that would hold quite a bit of the PD library I run.

In fact a Falcon CD with Falcon only software + the best of the latest Falcon
compatible software and a heap of pics/mods to lay with has been though
of at $60 for the master, then..... not a lot for each copy.

Eric March <diehl@nudge.io.org> writes:

>: Can I do this without trashing my D drive? I think so, but seeing
>: as
>: my floppy doesnt work at all, I can't back-up to be safe.

If you try doing stuff to your hard drive without backing it up, you stand a _rreal_ chance of losing the whole thing! C is your boot partition, if you make a mistake re-formatting it you may lose access to the hard drive! Get a new floppy drive _first_ and do a backup. Or even better, get a floptical drive and back your hard drive up in 20 meg chunks! The floptical will not only read floptical disks, it'll read/write HD/DD floppies as well.

828. 1mb 520's, etc.

I have the following ST equipment for sale :

(1) 520ST w/1mb RAM, 360k floppy
(1) 520ST w/1mb RAM - RF modulator built in
Both include the mouse.
I may also be interested in selling one or both of the following :
SC1224 color monitor - works great, but volume knob sometimes has a short
SC124 mono monitor - works fine, just ugly.

I'll take offers on any or all of the above equipment.
I also have a 512k 520st with mouse, make an offer.
(Unfortunately, two of the systems do not have floppy drives I'm willing
to dispose of at the moment..)

leave mail to jeremy@icw.com if interested. Thank you.

-jeremy

830. Panasonic 1091i for sale or trade

Newsgroup: comp.sys.atari.st
Date: 1995-07-16 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <h1AAoBE.lmcclure@delphi.com>
Source record: 162187

UPDATE:

The Star NX-1000 has been traded. Only the Panasonic 1091i remains
available for sale or trade. I consider this printer to have a value of
approx. $70, but would accept $60 + shipping for a cash sale.

The 1091i is very good to excellent condition, with the manual, original
box, and packing materials.

ITEMS WANTED IN TRADE:

* Single speed SCSI CD-ROM drive (for use with Atari ST)
* NVDI 3.0 or higher
* Geneva + Neodesk 4 (or either by itself + <$35)
* B&W hand scanner for ST (i.e., Migraph or Toad)
* 3.5" 1" high SCSI drive of equivalent value
* External 14.4Kbps data/fax modem
* Set of four 1meg SIMMs, 120ns or faster
* Set of two 2- or 3-chip 1meg SIMMs, 70ns or faster + <$15 cash
* Tabby graphics tablet
* Sound digitizer + cash (unless digitizer of equivalent value)

If you have something not listed that you think I might be interested
in, make the offer...the worst I can say is "No thanks".

If you have an item you want to trade but think it is worth more than
the printer (i.e., a Quantum LPS240S) let me know how much extra you
would want from me.

BONUS: If you live in the Little Rock area, and want to trade in person,
I'll throw in a box of fanfold paper I never got around to using,
and a plastic printer stand.

: >general niceness of Atari based machines (esp. Falcon, TT, Mega).

: You know nothing about Amiga at all, because if you do you would not make so
: dumb a comments, the Amiga kill all the Atari DEAD...!!!

Roger, I am the kind of person who always gives a person the benefit of
the doubt. I've been on this newsgroup for at least 4-5 years, and
have seen many many of your posts. I must agree with those other who
shout: go away.

You are obviously anti-Atari, so why in hell do you sit around in this
newsgroup? Do you get your jollies at alienating other people? You've
said time and time again that NZ has no Atari support, but there are
obviously people in NZ who own ataris, and would probably welcome you,
but for your rather unpleasent personality.

As to the above "the amiga kill all the atari dead", why then is Amiga
dead and Atari not? (and granted, Atari is NOT the same company as it was,
but it IS Atari!)

Naah! They would just mess up the things I have improved the Falcon with :))))

> (BTW, does a keyboard reset cause the same symptoms? Does the machine
> work ok when you turn it on?)

If I press the reset-button it might not work with turning the computer on/off,
BUT the keyboard resets always work (unless I run som strange program which
turns the keyb-reset-function off! :)

You could solder in another 16 256k chips to give you 1Mb.

You could look at Barry Orlando's modification which involves doctoring the
second bank with modified chip sockets to allow you to use 1Mbit chips
which will give you 2.5Mb.

Otherwise you are faced with overriding the 512K you have by using the
(e.g) Marpet board which will take 4 1Mb SIMMs to get you to 4Mb (but the
512K you have on-board will then be defunct).

845. MiNTNet/PPP/Compuserve HELP

Newsgroup: comp.sys.atari.st
Date: 1995-07-16 00:00:00 UTC
From: "David D. Hagood" <73437.3162@CompuServe.COM>
Message-ID: <3u9rvc$f8e$1@mhafm.production.compuserve.com>
Source record: 162239
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st,comp.sys.atari.st.tech

OK, so I have the TAF distribution (nominally) installed. I have edited my chat script so that I can call Compuserve's PPP server and get connected. HOWEVER, any time I try to do ANYTHING over the network, NOTHING happens. I see DATA going out to the modem. I DO NOT see DATA coming back. I can use the CIS PPP server with the KA9Q package, so I know it works. IFCONF on PPP0 shows that compuserve is connected. ISTATS shows that 4 of the received packets were dropped due to bad checksums.

INFERENCE: Once I have connected the PPP link, CIS does not like any of the packets I am sending, and is not replying.

Since I cannot get Chimera to work until I solve this problem, I am SOL. SOMEBODY, HELP ME! I know people have this working, so it must be something simple. Could somebody who is using CIS send my their config files so I can get this to work?

Its part of HDX 5.03c from what I have read, their is no full version
of AHDI 6.05 and the AHDI 6.061 is a Hacked 6.05, so I have read...

So you will find it on must FTP sites.....

851. Atari hardware for sale... second try

Newsgroup: comp.sys.atari.st
Date: 1995-07-16 00:00:00 UTC
From: klassa@aur.alcatel.com
Message-ID: <3u9m7v$3rr@aurns1.aur.alcatel.com>
Source record: 162245

Hi-

Since I got no response the first time, I'll try again (this time, with prices listed.

I've got the following for sale... I'd prefer to sell locally (Research Triangle, North Carolina area), but I'd be willing to sell outside the area if we can come up with a mutually agreeable method of payment.

o Atari 1040ST with 1MB RAM and TOS 1.4
o Golden Image Mouse (the original Atari mouse died years ago)
o Atari Color Monitor
o Atari Monochrome Monitor (*)
o Supra 20MB Hard Drive (with Case, Power Supply, etc.)

Whole system: $350 (OBRO). I'd be willing to parcel out the pieces, but only if I can't get someone to buy the whole system.

(*) The mono monitor gets a little flaky sometimes and requires adjustments to one of the pots... Once tweaked, it works fine until it gets too hot, then requires adjustment again. [The color monitor works perfectly.]

Reply by email only.

Thanks much-
John

P.S. I'd be willing to drive within a reasonable distance of Raleigh, North Carolina to cement the deal. For a local sale, I'd like to deal in cash, since (these days) you never can tell... Thanks.

: are used in the Falcon are double the cost... haven't found a nifty
: converter cable, yet, which is a shame cause I have two 340mb's sitting
: here as paper-weights...

The drives Falcon uses are the same as other computers use: laptops,
Amigas, etc. And that't the magical word! I couldn't find the adaptor
cable, before I happened to call one Amiga service center in Finland.
They had this cable in stock, and it wasn't even expensive!

And (though some people may disagree), it _is_ perfectly possible to
install a 3.5" IDE-drive inside Falcon! You have to remove one piece of
metallic cover, and cut off one plastic leg of the case. But it can be
done. I don't recommend this; one'd better get a larger casing. But if
you can't do that, at least Seagate's 3.5" drives can be fitted inside
Falcon's casing.

:
:Thankfully NEVER... since I dumped my 486 for a Mac, anyway. :) My point
:above is that a user should not -have- to hassle with such minutia.

well it is not entirely true that pc owners hassle with config.sys or
autoexec.bat. most people that buy a pc nowadays buy a complete
working machine, with cd-rom, soundcard etc. everything installed.
I have a 486dx2/66, 12mb ram, 500mb hard, cd-rom player, soundblaster16.
I never had to do anything with irq's or whatever there is. The ONLY
bad thing I have seen has nothing to do with the pc hardware, only with
DOS (I only use dos for games, linux for everything else). I get a lot
of games complaining about not enough base memory. commenting out 1 line
in autoexec.bat usually solves that problem.

most people in this forum should learn to distinguish between the
pc hardware and dos. they are really not the same.

> The AHDI 6061 that was on GEnie was removed because of this....
>
>

I have it. But in my Filelist is says 6.06i not 6.061 .

>
> Ataries HDX/AHDI is a load of Rubish,

It is not. I use it and it works without problems.

The early versions was crap. They couldn't cope with big partions.
And they didnt handle SCSI drives. Now they do.

From: mparrott@SINCOM.COM
Message-ID: <3uf9o7$1n1@cutter.sincom.com>
Source record: 162010

> 1. So if a TT is equiped only with ST Ram, is it that much slower?

If the program(s) in question _had_ to be run in ST RAM for compatibility, it would make any difference at all if the machine had TT RAM installed. However, if the program could be run in TT RAM, running it in ST RAM would be slower. But still much faster than a Mega STE, due to the 68030 processor.

> 2. Can a TT be equipped with mixed Ram types? (4Meg ST + 6 Meg TT)?

RAM types can be mixed. As I understand it, the general configurations could include either 2, 4 or 8 megs of ST RAM plus either 4, 8, 16, 32, 64 or 128 megs of TT RAM. Be advised: If the TT in question currently has no TT RAM, you'll have to buy a TT RAM board in order to install and use TT RAM. Personally, I found it best (cheapest) to order the board unpopulated and purchase my RAM via misc.forsale.computers.memory.

> 3. Does a program usually require one type of RAm? Could a program that
> requires 4 Meg Ram use 2 Meg ST + 2 Meg TT Ram as 4MB? (assuming the
> answer to number 2 is yes)

Yes and no. The two software flags which can be set are Use TT RAM and Allocate TT RAM. 'Use' means 'Run the program from', while 'Allocate' means 'The program will make use of'. If my experience and memory is correct, setting only the 'Use TT RAM' flag will load and execute the program in TT RAM while using ST RAM for grunt work (such as to load a document file). Setting only the 'Allocate TT RAM' flag would run the program in ST RAM, but use TT RAM for such grunt work. This probably wouldn't work for a program that _expects_ to see such-and-such an amount of ST RAM if it's to run at all, but it might be worth a shot.

Of course, I _may_ be wrong about how the flags work; if so, I'm I'll hear about it. :)

> 4. How is compatability with ST software?

It varies. Generally, very old software which depended on undocumented or unsupported features of the older ST's aren't going to work well, if at all. Newer software, or older software written to use documented system calls and the like, will probably work just fine. Something to note is that it's fairly easy these days to find suitable replacements for older software you may have been using on your ST system that will work perfectly well on the TT, either with low registration fees in the Shareware market or reasonably-price in the commercial vein.

> 5. If a program can take advantage of TT Ram, does it automatically
> use the faster Ram, or does it require using hardware/softwar switches?

Generally you'll have to set software switches.

868. Re: TAF disk problems

Newsgroup: comp.sys.atari.st
Date: 1995-07-17 00:00:00 UTC
From: maberg@xs4all.nl
Message-ID: <3uet7g$lhh@news.xs4all.nl>
Source record: 162012

Today I installed TAF on my falcon 4/420/850, with some difficulties.
Some problems aren't solved yet and there are also (at least *I*
encountered them) some pitfalls you might want to be warned of.

Some Tips:

1. there seems to be a symbolic link with the wrong path in one of
the .tgz files: the file "usr/lib/X11/chimera" (a symbolic link)
overwrites, during installation, the _application_ chimera that
just got installed a couple of seconds before.
The right path IMHO for the link should be :usr/bin/X11/chimera and
^^^
it should point to usr/lib/X11/Chimera.
^ (capital, see below)
You can also solve this problem, of course, by adding usr/lib/X11/
to the PATH variable in mint.cnf...but it isn't very elegant.
In all cases you'll have to extract the executable "chimera"
manually from the .tgz file (I think it was in 4a or 4b...)

2. furthermore, obviously something went wrong with the capitals.
in usr/lib/X11/ there is a directory named Chimera and an executable
^
(see 1.) chimera. That has also been mixed up: the directory should be
^
lowcaps and the program should be Chimera, starting with a capital.
Otherwise the program can't find its homepage. Of course the link
mentioned in 2.) has to take that into account.

3. FPATCH?.PRG (in the autofolder) does seem to cause problems.
You had better not use it in this case. You also have to configure the
NV-ram in the case of a falcon for monochrome. This cannot be done thru
the newdesk.inf file since mint never initializes the desktop. And
X-windows doesn't work in color-resolutions. (yet?)

4. I can start chimera offline and it works fine. If I start it when a
connection exists, I often get the errormessage
'exec: chimera: no such file or directory (or PID)'
I strongly suspect this to be due to a shortage of memory, but it is a
fairly strange way of putting it ;-)
If it works, however, it looks really nice.

5. I cannot disconnect: 'kill: can't open kill' is the message I get
when I try to. All the paths are installed okay though, I checked that.
For now I then start Xvt (tcsh), run ps and then run kill from the
commandline. A bit tedious, but it works also.

Maybe the problem(s) are only with this particular archive,
I don't know and I'm not going to download 3.6 MB again to test it.
I got my copy from Hensa: "x-total.zip" (and NO, I didn't make any
mistakes while unpacking and/or copying, believe me).

I also have some Questions:

1. I have a problem with FTP: I can login allright, but when I try to
"get" a file I get '200 PORT command succesfull' | '150 opening BINARY
mode data connection for filename.extension' and then immediately
'filename.extension: access denied' (as if the file is protected).
However if I type 'get filename.extension -' (to print it to the screen)
all works fine.
Of course if I try to retrieve the same file using a normal vt-100
terminal-connection thru my provider all works fine too.
Does anyone have any suggestions ? host-IP-numbers ?

BTW, how should one login with FTP? Should the password be

username@my.good.old.internet.provider or
username@my.computer's.dynamic.IP.number ?

The latter changes everyday so I wouldn't be very happy about this...
Especially with email this could get *very* annoying ;-)

2. About the aforementioned problem with disconnecting: Has anyone had
this same problem? I don`t know if it is a bug or a faulty configuration
or, again, a memoryproblem. This problem is consistent though, unlike
the problem with chimera (see 4 above), so I think it isn't a lack of
memory. It occurs when my harddiskdriver (ICD) uses 350 KB cache-
-but it also occurs when the cache is turned off, and all memory is
reserved for Mint.... Please help if you can.

3. It must be possible to automatically redial 'till a connection is
established, don't you agree ? How does one do that ?

I modified chatfile, ppp144 and resolv.conf as explained in the manual.
Or is there more you have to configure to get it right ?

Any help would be greatly appreciated...

You are making this comparison up. Use any benchmark utility, and you
will see that a Power Macintosh in emulation mode will never run slower
than a 25MHz '040. The new Power Macintosh 9500 runs in emulation mode
faster than a 40MHz '040.

On DJCHENG@phobos.oit.umass.edu, Daniel J Cheng (DJCHENG@phobos.oit.umass.edu) typed away:
: For those of you interested in musicians who use the ST,
: Vanessa Mae (Chun May) just put out an album: Vanessa Mae: The violin
: player. In the liner notes she credits an "Atari 1040" (no mention of
: ST or STE) She also credits the program she used, but I don't have it
: in front of me.
: She also used a Mac....

Yeah, I went tohave a look at this CD, and she does mention the help of:

Atari 1040 with C-Lab Notator, and Mac with Cubase! However, i wonder
why Cubase wasn't used on the Atari instead, as it is a lot better
than the mac version (or so i have been told).

Tch. Did you ever actually say which VT100 features you needed in the first
place? I did mention that ST Term was a TOS program, so you needn't have
expected to have font trickery like double height characters, underline etc.
I don't regard that stuff as vital so it suits me just fine. Each to his
own and all that.

Puting a turbocharger in a Yugo may improve performance. So may adding nitros-oxide. However, it's still a Yugo and will always be a Yugo.

Put a Pentium in a PC, put in a graphics accelerator, put in extra RAM, add WindoZe. Sure it runs faster, but under it all is still 1982 PC technology. You still have 640K main memory. Banked and paged display RAM. The need for so-called RAM drivers just to use extra RAM. The need for memory paging, flipping and dumping into and out of "expanded RAM" and 640K RAM just to get software to run. You have the need of constantly changing and modifying IRG, DMA, and port addresses just to get anything to work together. The so-called new "Local Bus" technology which has been used on Mac's and Atari's since their introduction.

What about segmented execution memory for "compatibility"? Yes folks, that's only 64K a piece.

Your so-called fancy PC is nothing more than a Yugo with a turbocharger.

On a Mac or Atari you have no such problems.

It's amazing how brainwashed Microsoft has the PC users. A buncyh of loyal lemmings who have no idea what better things are out in the world.

Rich

Perhaps. Convince me. What is the cost of 180-200 hours per month? (For the months of April, May and June that is about how long I have been online if my comms software logbook is accurate). Are they like C$, where, a few years back, the charging clock would stop whilst you were uploading? And how is the access to the net? (oops, that wont be available for another 18-24 months...)

> But you do need a credit card to use it....

.. and pay usurious finance rates for the privilege. Nah. I'd rather stick to my net provider, which allows me to pay in cash as I go. I currently have a nice healthy credit balance there, and support is A1+.

> Plus in only runs at 2400 but could soon be up to 9600....

(Great for 'in', but what about Genie? :-))

Wow! 2400 baud! I _am_ impressed! Guess I'll have to sell my 28800 baud modem and upgrade. (Hey, anyone! Want to swap your 2400 baud muscle-modem for my 28800 slow-coach?)

Seriously, though, the only thing I would be interested in was the "Dateline Atari" - which is often available via other sources not long afterwards. (Unless Atari has discontinued it's participation in that as well).

880. Re: Utopos 1.x ????

Newsgroup: comp.sys.atari.st
Date: 1995-07-17 00:00:00 UTC

Message-ID: <3ucogb$19d@golem.wcc.govt.nz>
Source record: 162115

```
] can anyone tell me what the latest version of utopos is and if it works
] con030, 4MB, TOS 4.04 ? (No, Utopos 1.55 does not).

(Looks for disk....) Here it is, latest version is v1.61. It works on,
and fully supports the Falcon. v1.61 "came with" Stardust, but presumably
it can be upgraded to. (Doesn't worry me, I had it in the first place
and got stardust as well :).

Here's the info from the help file:

UTOPOS SHOULD WORK FINE ON ALL STE, MEGASTE AND
FALCON MODELS. THE GAME RUNS IN 320*280
RESOLUTION. TO ACHIEVE THIS ON STE AND MSTE,
COUPLE OF 60/50 HZ SWITCHES ARE GENERATED DURING
EACH VBL. IF THIS DOESN'T WORK PROPERLY ON YOUR
MACHINE (THE SCREEN FLICKERS ETC.), PRESS 'B'
TO SWITCH THE BORDERS ON/OFF.

THE SCREEN IS DIVIDED INTO THREE INDEPENDENT
SCROLLING AREAS. THE GAME RUNS ALWAYS IN ONE
FRAME (THE SCREEN IS UPDATED 50 TIMES IN A
SECOND) SO ALL MOVEMENT IS VERY SMOOTH. THERE ARE
8 CHANNELS OF 25 KHZ SAMPLED SOUND EFFECTS
COMPLETING THE ATMOSPHERE. IF YOU HAVE A FALCON,
UTOPOS RUNS IN ST BUS EMULATION MODE, BUT WITH
16MHZ CLOCK SPEED AND CACHE.

UTOPOS VERSION 1.61
-------------------

- FOUR BRAND NEW TRACKS!
- MORE FALCON COMPATIBLE THAN EVER!
- OPENS TOP AND BOTTOM BORDERS ON FALCON
- FEW MINOR BUGS REMOVED

UTOPOS VERSION 1.55
-------------------

- COMPATIBLE WITH FALCON 030 MACHINES

UTOPOS VERSION 1.54
-------------------

- MANY BUGS HAVE BEEN REMOVED
- MAIN MENU IS A BIT MORE USER FRIENDLY
- THERE ARE THREE NEW BOMBS, NAMED AS
ROLLO, ROCKET AND ROLLER
```

- THERE WAS A PROBLEM WITH EARLIER VERSION
THAT THE TWO PLAYER VERSION DIDN'T FIT
INTO MEMORY ON ALL 1MB MACHINES. THIS
SHOULD HAVE DISAPPEARED NOW.

Version 1.61 is quite stable now. Apparently it will almost certainly
be the last version, and more than likely be the last thing Aggression
does for the Atari. You can email creator@xgw.fi (Jani Penttinen) who
is the main coder.

> help will be appreciated. Thanks.

This used to be advertised only for the STE, never saw the STFM version.

You need to have 4 Mbytes already installed before you can use this board
& I believe that it takes 1 Mbyte SIMMs. I believe that it fits on top of
the CPU
(push on connection). You need at least TOS 2.06 & there is also some
s/ware patch.

Just add the following line to your mint.cnf:
echo ^[e^[v
Where ^[means Escape, you may enter it using (Micro)Emacs by pressing
Control-Q Escape.

This will switch on the cursor and line wrap.

Ciao

Thomas

All my problems I have either under TOS and MiNT.

> If you have an '030 machine and are not developing for GEM, I'd strongly
> suggest setting up Linux (I have no probs debugging c++ progs compiled
> under GCC 2.6.3).

Very funny...

Of course I need the gcc 2.6.3 to use with GEM, otherwise I have linux instaled and have no problems with debuggnig C/C++ programs under it (Is there anone, who has???). As I see there is no many gus programming in very useful C++ and/or **GREAT** GEM++ library. That's pity.

For a moment I fix my problem something like 'manually' but it works. Exactly the problem is that in gcc 2.6.x there is new builtin type bool

and the mentioned problems with gdb are caused by new non-standard
symbols generated in this occasion by gcc or maybe sym-linker. If there
is ANYONE (I doubt...) intrested, I can send him my own little utility
witch fix the sym file, so I CAN AGAIN DEBUG MY C++(gcc2.6.3 syntax)
PROGRAMS WITH gdb 3.6pl4 UNDER MiNT!!!!!!

Anyway if there is ANYONE developing for GEM with gcc 2.6.3 please

*** A N S W E R ***

I> there are the following cables:
I> green, red, yellow(audio?), 3 black , and a clear one.

I'm afraid I can't help with the colours - these may well be different on different models anyway. The 13-pin DIN connections for the SM124 are:

1 Audio
4 Monochrome detect
9 Horiz. Sync
11 Mono video
12 Vert. Sync
13 Ground

If you have a continuity meter and take the back off the SM124 (6 screws -then watch out for the short leads from the PCB to the speaker inside) you should find that most of the leads are marked where they plug onto the PCB - use the meter to identify them at the bare cable end.

Serious sizes? Why would I need that resolution? Plus a graphic board for
that size would not cost that much. Even it did, the Mac set up would cost way
less than your over priced under performer. Who does CGA today?

Hmm, just a few of points here,
1. No computer is a living organism therefore cannot be killed dead.
2. If they were living, how could you kill other than to death?
3. Your spelling, sentence construction and grammar are still poor
and indicate the intelligence level of a small slug under the influence
of alcohol.
If you hate Atari so much, why do you keep reading and posting to this
group. Try to answer the question this time Roger.

Hi

I am looking for a printer driver to connect a Atari Mega ST
to a NEC "Silentwriter SuperScript 610".

Where can I get the necessary driver (ftp etc...) ?

Please send your answers to:

reinhard@pool.informatik.rwth-aachen.de

Thanx, Reinhard :)

>
> What could we expect to see, if this game was made to use Falcon's
> abilities fully?

At first I think it should works in TC, then the bitmap mapping should be done, maybe some (just some simple fast routs) shadind, phong etc (Did anyone have seen the F1 animation on EUROSPORT?). Then some sound effects will be nice to hear. And joypad/analog joy support will be appreciated.

I would be quite diffrent game - better, faster, smoother(graphics) and so on, and so on...

My suggestion on dealing with these individuals who don't like Atari
is to simply ignore them. If at all possible, set your news reader to ignore
any message from them. If they find themselves shouting into a bucket long enough,
perhaps they will get tired of the whole futile exercise and go away. And even if
they don't, you won't be reading their messages, so it won't matter.
As I have said before and almost certainly shall again:
"I don't take shit
I don't give shit
I am not in the shit business
Life's too short for this shit"

The very last update to this version was dated April 18th (1991 or 1992,
forget which). This update incorporated the ability to perform conversion
from/to the new baseline of version 4.2.

If you are talking about the beta release, then my answer is YES - I have that. A can also state that I have placeed an order with Darek Mihocka (hope I spelled that right) because of that.

My experience is that Gemulator 4.0 basically works with a few items that I have tried so far. And doesn't work (yet) with a couple others.

However, it does 'see' all peripherals and devices hooked up to the ibm/clone. This includes everything on a network as well (I am using this Gemulator 4.0 on a Micron 486/66 on Novell Netware 4.10 at work). Because all my printing devices are managed through the Print Manager, the beta version cannot send any print output through to the network printers.

This is why I decided to BUY VERSION 4.0 (upgrade price is around $50-$60 if you already have the prior version such as 3.02). It should let me print to any of the laser/inkjets at the office.

Hope this helps you.

hi there atari-nuts!
what with me being kinda isolated from the atari
community in ireland i have found it really hard
to get hardware such as a hi-rez monitor.

i managed to dig a sm124 out of a skip!
the power goes on and all , thing is i dunno
how to wire the cable to a 13-pin DIN plug
as i dont have diagrams etc...

can anyone help me please?
there are the following cables:
green, red, yellow(audio?), 3 black , and a clear one.

thanks a lot ppl!

You must be talking about Atari World, which has made an appearance even here in the West of Ireland. This is a good one, & I don't know about ST Format being so trusty, more like rusty.

I mean, there was a half page ad in the last issue from a company who only advertised PC games!!!!. Maybe they sent the ad to ST Format & really thought is was PC Format.

|*Yawn* how often do you do this?

Thankfully NEVER... since I dumped my 486 for a Mac, anyway. :) My point above is that a user should not -have- to hassle with such minutia.

And don't get so defensive. I was simply taking exception to your previous statement "inexpansible as Macs are" that made it sound like Macs are closed systems, which is simply not true. The Atari is -much- more 'closed' than the Mac is (but I'd take Atari over PC ANY day). :)

F> can anyone tell me what the latest version of utopos is and if it works on
F> a Falcon030, 4MB, TOS 4.04 ? (No, Utopos 1.55 does not).

I have a Falcon030, 4MB, TOS 4.04 and Utopos 1.55 works with it.
At least on RGB monitor/TV, with VGA it has some problems after
player 2 dies. The docs say that you shouldn't run Utopos
in ST compatible mode... perhaps that is your problem.

BTW. I use registered version, I don't know if the demo
works with Falcon.

910. TT memory

Newsgroup: comp.sys.atari.st
Date: 1995-07-17 00:00:00 UTC
From: yc1663@CNSVAX.ALBANY.EDU
Message-ID: <3uehbg$5kn@rebecca.albany.edu>
Source record: 162145

I'm confused about the memory of the TT: ST Ram and TT Ram.
I only know this from the brief explanation in the Toad Catalog.
ST RAm insures compatability with ST Software, and TT Ram "drives
the 68030 the fastest"
(Toad)

1. So if a TT is equiped only with ST Ram, is it that much slower?
2. Can a TT be equipped with mixed Ram types? (4Meg ST + 6 Meg TT)?
3. Does a program usually require one type of RAm? Coul a program
that requires 4 Meg Ram use 2 Meg ST + 2 Meg TT Ram as
4MB? (assuming the answer to number 2 is yes)
4. How is compatability with ST software?

I have a chance to get a TT secondhand (actually third hand), and
the guy I'm buying it from is really confused about the whole business
(part of his dissatisfaction with Atari, among other things) and he
is parting with it . I get a dirt cheap computer, but we lose another
Atari user to the three letter behemoths. :-/

Sorry, just thought of one more question:
5. If a program can take advantage of TT Ram, does it automatically
use the faster Ram, or does it require using hardware/software
switches?

Thank you for your help,

Yim
(still plugging away with 512K STFM.....)

911. Re: Falcon users & programmers please read this!!!

"The config program used by the Falcon and TT should restore it though". This may have some bearing on a small problem I am having: Certain programs (such as the ADSCSI CPX) will give me German dialogs when running MultiTOS or MiNT, but not when running standard TOS 3.06. Possibly this is due to some strange setting in the NVRAM. Is this possible? If so, where can I get a good setup program?

Here is a solution which could be complex but is likely to work!
Using a diagnostic cartridge !
There's two kind of cartridges on atari:
-The file cartridges contain files that can be executed or read
directly from the desktop they act like kind of ROM disks.
-The diagnostic cartridges start with a special header and contain
a routine that is executed each time the computer boots.

On a standard atari (STf for instance) the boot program in ROM first
try to execute before setting up anything. I discovered this when I
disassembled the french TOS 1.2 of my old STf. I think this feature is
still available on the Falcon, (I didn't checked on my own one)
in this case you can solve your problem.
You have to create a diagnostic cartridge who will reset your NVRAM.
As your problem come from an invalid configuration which stops the
Falcon hardware configuration process, and as the diagnostic cartridge
is executed before the hardware setup, here is a solution.

I hope this works (Nobody's perfect...).

As I think you probably may not be able to create such a cartridge ,
I can help you you need it by creating the cartridge routine.
You'll have then to put the file that I'll give you in a blank
cartridge (ask to your local Atari computers dealer or to an Atari
club).
If you can't find anyone near you who knows how to create an atari
cartridge, I can send you a schematic by conventional mail.

Anyway if your interested, please send me an e-mail directly as I don't
read news really often.

There's something about this thread which seems to addle people's
brains ...
tar (tape archiver) takes a bunch of files and wraps them all up
as one file, with a directory hidden inside.
gzip (GNU zip) takes one file and compresses it, producing one
(smaller) file as a result.
Both feel most comfortably at home in a unix environment, but can be
persuaded to run under TOS or DOS or similar. tar will quite happily
handle files with long, mixed-case filenames, which is one reason why
the pair are so often used for MiNT stuff.

To unpack a .tgz archive, it first has to be ungzipped (gunzipped):
gzip -dcf archive.tgz
Rename the resulting file archive.tar, and de-tar it:
tar xvf archive.tar

If you are running under MiNT and both gzip and tar are in the $PATH,
you can telescope this into
tar xvzf archive.tgz
which tells tar to invoke gzip to pre-process the file.

The parameters given are for GNU tar and gzip (if I've got them right).
Look for TAR1112 and either GZIP or GUNZIP on your local friendly ftp
site, or use the ones bundled in the TAF distribution.

One last point: it's OK to gunzip into an 8+3 upper-case filesystem,
because this step only produces one file and you can call it what you
like ... but when you de-tar this, do it on you minix partition so that
names like /usr/lib/X/app-defaults don't get munged. Of course no one
would be so stupid, but still I did it once ...

919. Genlock on Falcon?

Newsgroup: comp.sys.atari.st
Date: 1995-07-18 00:00:00 UTC
From: andrew@minster.york.ac.uk
Message-ID: <806056590.0@cs.york.ac.uk>
Source record: 162016

I'm considering connecting my Falcon up to do titling and so on for my
video epics. I know the Falcon can overlay but I've not seen any FAQ about
how to do this. I have an genlocked video sync source
so I can plug this into the video port of the Falcon if I knew what I was
doing.

Any help would be appreciated.

Thanks.

-Andrew

> 1/is there an internal clock which runs on backup battery when the machine
> is off?

Yes. It runs on two penlight (AA size) batteries. The ones in mine (I used Alkaline batteries - Eveready Energiser) were put in early in 1990, and haven't yet needed replacing. Even after leaving it unused for a year or so (I now use a TT) the clock is accurate (+/- 2 seconds, a lot better than most digital watches!)

>

> time-stamped?

Assuming "correctly time-stamped" means "use today's date", then no utils are needed, as long as the batteries do not go flat. To be absolutely certain of this, spend a few pennies and purchase some new batteries. As you can see from my example, it doesn't "eat batteries for breakfast".

It certainly looks odd. Maybe Samy can explain what was intended?

> 3. FPATCH?.PRG (in the autofolder) does seem to cause problems.
Yup.

> [...] You also have to configure the

> *If* it works, however, it looks really nice.
I have the same, but the circumstances are slightly different. Which
also points to a memory problem (my AUTO folder may be slightly different
to yours).

> 5. I cannot disconnect: 'kill: can't open kill' is the message I get
> when I try to. All the paths are installed okay though, I checked that.

Have a look at where Disconnect is defined in /home/.tvwmrc abd spot the
deliberate mistake: the quotes around the cat command are the wrong way

round (should be back-quotes).

> Maybe the problem(s) are only with this particular archive,
> I don't know and I'm not going to download 3.6 MB again to test it.

I hope that when TAF produce a new version there will be a changed-only
archive for existing users.

> I also have some Questions:

Would be neat. Better still, dial on demand (when an application tries
to use TCP/IP and there is no connection, start dialling ...) :>

Cheers

chris

> Well, I got a bit further down the Line by Changing the Bootmanager
> I was using, Superboot only allows you to leave in Medium rez.

I think Superboot will leave the video in whatever rez it found it
in(*), which after a cold boot depends on the NVRAM setting. When
booting into GEM, this will be overridden by the NEWDESK.INF file.
I use Superboot, and used BOOTCONF to make the bird boot in mono.

> Now I'm using Stoop which'll let me leave bootsequence

Reads like a very nice description of what happens when your
screen is in 16-colour mode and the software assumes it's in mono ...

> I am Now sure that I come into Xwin in the right rez,
> StHigh. I browsed the .fvwmrc file and found some setting about
> physical screen size, but as there lacked a proper explanation
> for this setting I dared not change it, Could this be the problem?

The problem is, you need to boot in mono (2 colours, not 16).

> I'm out of ideas.

Don't worry, you'll always find some here ...

(*) not quite true, if its finds the machine in ST-low rez it'll switch
to medium.

: Serious sizes? Why would I need that resolution? Plus a graphic board for
: that size would not cost that much. Even it did, the Mac set up would cost way
: less than your over priced under performer. Who does CGA today?

I haven't said, that you can't buy such a card. You have spoken about the
built-in card. And about the sizes, if you have worked with such resolutions
with Multitasking and many windows, you will love it and don't want to work
with less. So, with Macs it is the same, you have to buy a card.

: >
: > : Can you add a graphic board for the ST/Falcon?
: >
: > Yes, just buy the board.
: >

: But would cost way too much..

No, same prices like Apple.

M. Dekker (mdekker@fwi.uva.nl) wrote:
: well it is not entirely true that pc owners hassle with config.sys or
: autoexec.bat. most people that buy a pc nowadays buy a complete
: working machine, with cd-rom, soundcard etc. everything installed.
: I have a 486dx2/66, 12mb ram, 500mb hard, cd-rom player, soundblaster16.
: I never had to do anything with irq's or whatever there is. The ONLY
: bad thing I have seen has nothing to do with the pc hardware, only with
: DOS (I only use dos for games, linux for everything else). I get a lot
: of games complaining about not enough base memory. commenting out 1 line
: in autoexec.bat usually solves that problem.

You don't have to hassle about since you buy a new card. Then you will need someone who knows how to install all. And if you haven't to do something with IRQ etc. you haven't tried to optimize you system. This would bring much more power to your system. Look at most of the Windows machines, they mostly have installed the original VGA-driver and not the one for the graphics card they really have. So it was easy to install (only pressing automatic installation) but they have poor resolution and low frequencies. Problems with IRQ and harddisk with more than 500MB isn't a problem of DOS. It's a problem of the hardware concept.

: most people in this forum should learn to distinguish between the
: pc hardware and dos. they are really not the same.

Here you are right. The most problems come from DOS, but not all.

928. Re: TT memory

Newsgroup: comp.sys.atari.st
Date: 1995-07-18 00:00:00 UTC
From: gmiller@inca.co.nz
Message-ID: <3ug6au$af0@inca01.inca.co.nz>
Source record: 162025

yc1663@CNSVAX.ALBANY.EDU wrote:
> I'm confused about the memory of the TT: ST Ram and TT Ram.
> I only know this from the brief explanation in the Toad Catalog.
> ST RAm insures compatability with ST Software, and TT Ram "drives
> the 68030 the fastest"
> (Toad)

> 1. So if a TT is equiped only with ST Ram, is it that much slower?
The speedup from ST-RAM (which is 16-bit "slow-RAM") to TT-RAM (32-bit "fast-RAM") is approximately 50%. If you get a good TT-RAM board, with a good set of RAM on it, the speedup can be even greater. The standard Atari TT RAM board is a little more sluggish than third party boards, but is still quite a bit faster than ST RAM.

> 2. Can a TT be equipped with mixed Ram types? (4Meg ST + 6 Meg TT)?
Yes. An 8Mb TT has 4Mb of ST and 4Mb of TT RAM. Likewise, my 20Mb TT has 4 of slow RAM, and 16 of TT RAM. TT RAM, being 32-bit, must be installed as 32-bit increments (so, you would need 4 8- or 9-bit SIMMs if your board accepts them).

> 3. Does a program usually require one type of RAm? Coul a program
> that requires 4 Meg Ram use 2 Meg ST + 2 Meg TT Ram as
> 4MB? (assuming the answer to number 2 is yes)

Sorry. If you had 2 Mb of ST RAM, you could only "upgrade" to 4Mb by using another 2Mb ST-RAM board. TT-RAM would need to be 4MB, giving a total of 6Mb. This is a requirement of the TT-RAM being 32-bits wide.

A program has a series of bytes at the beginning of the PRG file, which contain "flags", informing the OS, "I like TT RAM", or "When I ask for some block of Memory give it to me from XX-RAM". The person who wrote the program will set these accordingly. Utilities exist in the PD to alter these flags. If the program was written before the arrival of the TT in late 1990/early 1991, there is a high chance that it will not work properly in TT-RAM. "Good" software doesn't care, it'll use either - although some software MUST reside in, or be able to use ST-RAM, such as those who use the DMA-sound, do animation and so forth.

> 4. How is compatability with ST software?
"Good" software will run well. If you are interested in games (I am not), then you may be out of luck, as most games are written for 68000 cpus, and the 68030 reacts differently in some cases.

> I have a chance to get a TT secondhand (actually third hand), and

: Craig Oldfield

Craig, I too own a 486DX4-100 and do enjoy using it (once it is all set up to work after installing new software). However, I do not think it is the end-all-be-all of computers. I also do not think it is even remotely "hightech" (as far as the design is concerned).

One good thing I can say about them, however, is that the engineering feats achieved by card manufacturers just to get high-tech things to work in the old design are ingenius. It's like getting a Sinclair ZX81 to do Ray Tracing.

Rich

I'm sure I read in the "Independent" Newspaper this morning (Monday) that
their price was going up due to paper costs.

I know our local paper has the same problem.

937. HD Partitioning Problem, REAL HEADACHE!!!

Newsgroup: comp.sys.atari.st
Date: 1995-07-18 00:00:00 UTC
From: Faterioun@NYNEVE.mke.delcoelect.com
Message-ID: <3ugfbd$53@kocrsv08.delcoelect.com>
Source record: 162034

Hello,

I have 3 harddrives 1 fixed and 2 removables, all use ICD Host Adapter. using ICDFMT i have formatted the drives and partitioned them to 3 partitions. First partion 'C' is 16.00 MEG, 2nd 'D' is 16 MEG and third 'E' is 12.45 MEG. After formatting and partitioning successfully and setting the 'C' partition as the Boot-up partition (using HDUTIL.PRG) the 'C' partition seem to become corrupted, that is if i run the ICDFMT.PRG and check the partition info again the END SECTOR value is changed to some huge number, even bigger than the size of the hard drive.
I use TOS 2.06 and have formatted the fix drive and 4 different removable cartriges more than 3 times but always seem to lose the END SECTOR size on the 'C' partition (the BOOT-UP Partition), the 'D' and 'E' have correct Sizes.

I have two Atari systems the these hard drives are used on and they worked fine for years, but all of a sudden i cannot seem to have even one working correctly.
I understand the inner working of the ATARI and the hard drives a little bit but cannot seem to figure out why the hard drives behave like they are.
I am not sure if the partitioning information is kept on a track on the drive or is on the ICD host card.
If anyone could help I do appreciate their help.

Thankx in Advance
KAMRAM FATERIOUN

: I'm running an F030 with VGA, is Chimera somehow only RGB?????!?!?!?
: Help me please!
Ah,, you did not RTM....

The X package needs to run in ST-Hi rez... all you need to do is boot
up in ST-Hi rez, which you do by setting the NVRam to do so. Don't
worry as you can go into any resolution using a Boot manager... you
just boot-up in ST-Hi. ScreenBlaster and BlowUp work with the X disks,
so you can have larger areas on screen...

I know somebody who actually purchases paper for a printing company, and she confirmed to me that the price of the paper used in mags like STF has gone up by something like 50% since the start of the year, and is expected to go up again in the next couple of months.

The thing that really bugs me is having those flipping staples in the spine. I much prefer the bound method, as the pages are a lot less likely to come out.

945. Complete ATARI system for sale! hoo-wah!

Newsgroup: comp.sys.atari.st
Date: 1995-07-18 00:00:00 UTC
From: lej@prairienet.org
Message-ID: <3ugtpi$rh6@vixen.cso.uiuc.edu>
Source record: 162042

Hi all...

I have a complete computer system for sale...

That includes all manuals, helpful hint books, lots of programs,

printer, monochrome and color monitors, two floppy drives,

hard drive, 2400 baud modem, lots and lots of programs, including

word processing, desktop publishing, database, public domain

programs (lots of these), utilities, games and too much other

stuff to mention.. Oh, theres a primitive 300 dpi scanner,

video digitizer, and video output device as well..

The computer? It's an ATARI 1040ST, which has the system in ROM

on the motherboard (no system disks needed), 2.5 Meg of memory,

built in low density 3.25" floppy and clock cartridge.

This computer naturally reads low-density IBM disks. With a bit

extra money for an emulation device, you can emulate an IBM XT or

an Macintosh Plus (the old cube macs).

Complete system can be yours for $450 OBO..

This is a great system for beginning computer users.. It works

basically like a macintosh, with point and click operating system.

Great machine..

Call 217-356-7916 or email me (preferable) soon...

Thanks

: (Toad)

: 1. So if a TT is equiped only with ST Ram, is it that much slower?
: 2. Can a TT be equipped with mixed Ram types? (4Meg ST + 6 Meg TT)?
: 3. Does a program usually require one type of RAm? Coul a program
: that requires 4 Meg Ram use 2 Meg ST + 2 Meg TT Ram as
: 4MB? (assuming the answer to number 2 is yes)
: 4. How is compatability with ST software?

Hi,

I hope my English is not too bad.

I have got a TT and I am satisfied with it. Sure, you might have to exchange some of your older software, especially games, but the newer programmes usually run on TT.

Progammes which need higher performances are usually combined with an install.prg which sets the necessary flags if it finds TT-typical hardware.

Some programmes, like my textsystem That's Write (it is a european development, I don't know about its spreading) uses both ST and TT RAM.

Bye,

Kerstin

Thank you all for your help upon this subject,
The problem was indeed the setting of the NvRam.

Thing was I thought that the Bootmanager I used
would do the trick. (Stoop v.1.01) It is suppoused to
leave the screen in the mode you set, but it doesn't,
it leaves the screen in the mode it entered in, no matter
what you set it to.

Xwindows now works graphically fine,
just need to get all the protocols working now.... :(

Once again Thanks all,
-Peter.

Ps. I did RTFM , but I trusted the Bootmanager too much.
It left the screen on 16 Col mode no matter what.

952. X-Windows Falcon VGA HELP!!

Newsgroup: comp.sys.atari.st
Date: 1995-07-18 00:00:00 UTC
From: von@PROBLEM_WITH_INEWS_DOMAIN_FILE
Message-ID: <3ueutn$6dq@idefix.eunet.fi>
Source record: 162049

Well, I got a bit further down the Line by Changing the Bootmanager
I was using, Superboot only allows you to leave in Medium rez.

Now I'm using Stoop which'll let me leave bootsequence
in any resolution I choose, Ofcourse to use Stoop I had to
get bootconf to change the Factory setting in the NVRAM and
boot the Machine in 640 * 480, 16 ... OneCould ofcourse use
bootconf itself to set the startup rez. Well, this is probably
old news for most of you.

Anyways, all this did NOT solve the original problem,
even after I re-installed the whole TAF diskset with the files
from Hensa which are reputably somehow more functional then the
ones from the other packages.

The Problem is still that the screen-mode that
Xwindows seems to assume or something is screwed, it comes
up as 1/4 of the width and all the menus look like something
from a 3d comic when you're looking at them without 3d glasses
if you know what I mean...

I am Now sure that I come into Xwin in the right rez,
StHigh. I browsed the .fvwmrc file and found some setting about
physical screen size, but as there lacked a proper explanation
for this setting I dared not change it, Could this be the problem?

I'm out of ideas.
Help please,
-Peter.

] > You know nothing about Amiga at all, because if you do you would not
] > dumb a comments, the Amiga kill all the Atari DEAD...!!!

Eh!? Now this is getting _really_ sad..... The only aspect the average
Amiga beats an ST in is Games. Unless you want to pay for the machines
with more grunt, (A1200 or A2000 etc.). Besides, compare prices.....
A good TT will cost about as much as a top of the line Amiga, and they'll
give each other a good run for their money....

Anyway, programmers hate Amiga machines, too many custom chips etc. The
ST is nice and simple, nigh on everything goes straight to the 68000.
(Of course, some extras to the DMA/Blitter etc. doesn't go amiss :)

Oh I see what you mean. No there aren't any restrictions on heterosexual
sodomy (which of course is more common), so long as you don't frighten
the horses.

The distinction between the sexes is said to have arisen because Queen
Victoria couldn't believe that women did That Kind of Thing. More likely
because an all-male parliament didn't know how to discuss it. :)

I am looking for has a graphics converter program that can convert NEOCHROME or DEGAS format to GIF or PCX file format. If anyone out knows of a simple program that can do this for me, I would greatly appreciate it if you would drop my friend a line and tell him the name or an ftp site so he can download it for me. Thanx.

It only works in mono. Either connect a mono monitor (if you have one),
or modify the NVRAM to boot up in mono, using BOOTCONF.PRG or suchlike.
(And don't screw it up!)

KF> or is on the ICD host card.

The partition info is towards the end of physical sector 0 of each device.

It sounds as though you have some incompatibility between the formatter and
the HD driver. Have you got the ICD CLEANUP.PRG? You could use this to
re-write the partition info and the FAT of C:.

A> prices!

There's a lot more to cover price than you all seem to appreciate.
Basically its worked out (and the amount of pages per issue) on how much
revenue they get from advertisers. If no-one advertises then they can't
print so many pages. You might be interested to know that although the
page size has gone down to A4 and the cover price has gone up, the
advertisement price has gone up by about 40% too! Go figure...

Source record: 162063

The mechanism in my SH204 failed so I have tried replacing it with a 130 Mb Conner SCSI drive. I didn't have any trouble connecting the power cable and the data cable from the Atari host adaptor to the Conner and it seems to power up quite satisfactorily. However, when I try using AHDI5 to format it, HDX complains that the drive is not responding. Can anyone help me? Do I have to set some jumpers on the drive or something?

Peter B�ck (von@PROBLEM_WITH_INEWS_DOMAIN_FILE) wrote:

I got it working last night (in VGA) but I had to use NVRAM to set up the machine to boot up in ST High resolution. I think STOOP doesn't correctly set up the screen resolutions because it goes back to a 16 cols Falcon mode even when you set it otherwise. It doesn't re-write the NEWDESK.INF either so if you have a resolution change in there it superseeds what you set in STOOP.

Don't use STOOP to reset the screen resolution. If I'm wrong then someone please post the correct way to work with STOOP and screen resolutions.

I also had to ensure nothing was loaded other than MINT from my AUTO folder. I had FPATCH2 and FALCVOL (only a few Kb each). Just these meant that Chimera didn't have enough memory.

How do I get virtual memory and is it possible to change screen resolution before MINT loads xinit to overcome the problem with STOOP?

Does anyone have X windows running with Mintos? I thought about setting this up tonight but it could turn into real nightmare?

BTW: Thanks TAF for the excellent distribution.

-Andrew

Attention Atarians and those of you who collect all things Atarian! The ACES (Associated Computer Enthusiast Society) is back, and on the Web. As most of ACES member are former Atarians, we are looking for any and all photos, pictures and sound files of famous, infamous and even notorious Atarians. In particular, we are looking for the likes of the following:

Chris Roberts (Former SysOp of the Dragon BBS (aka Weyrleader), President of the PALACE user group and Dragonware of Havre, Montana; and most notably the Atari User Group Coordinator who dropped the prototype Stacy Laptop).

Any of the Tramiel family of Atari and Commodore fame.

Jay Miner, one of the developers of the Atari and Amiga computers.

Ralph Mariano, former publisher of ST Report.

If there is anyone you can think of that is important in the Atari world (of course there are many), please include them. Much of this will be for a web page in development at this time.
If you are interested, you can view the ACES web page at
http://www.dashing.com/dash/aces/aces.html

978. ICD AdSCSI+ clock problem...

Newsgroup: comp.sys.atari.st
Date: 1995-07-19 00:00:00 UTC
From: jat5@york.ac.uk
Message-ID: <3uivut$69i@mailer.york.ac.uk>
Source record: 162075
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello,
I've got a problem with the real-time clock on my AdSCSI+ host adaptor... My ST just won't recognise it - 'IDCHECK.PRG' skips over the SCSI address of the RTC with the message 'skipped by IDCHECK' (or something).

It did work once! Honest!!

Has anyone any ideas?

Thanks,

john..

I mangaged to get things running better:
1) DO NOT USE A HARDCODED IP ADDRESS! Tell PPPD to set both the local
and remote IP addresses from what the remote host tells it.
2) Tell PPPD to add a default route when it makes the link.

I can now do FTP/PING, now if I can just figure out why Chimera doesn't find a
any URL's....

I believe this is normal behaviour for IDCHECK. (You can set which addresses
to skip, somewhere in one of the config programs.)

If your clock isn't working (i.e. not returning the correct time), it's
probably a battery problem. Try replacing it.

>A friend wants to use a TTM194 monitor as a replacement for a
>SM194 (Moniterm). Can it be done? If so, how?

No, it can't be done, although the two are fairly similar.

The only available replacement is the EIZO/Nanao 6500-M. It needs to be rejumpered internally to supply -7V to the graphics card, and requires a handmade cable.

>How is good old CHKDSK3 working on a Falcon ?? Have you tested it ??

Atari's CHKDISK3.PRG works fine on the Falcon, on IDE and SCSI drives (even on 1 GB partitions). The only drawback is, it sometimes (not always) refuses to be run in color modes.

bye, Peter

AHDI 6.061 is a patched version (the patch came from Atari Germany) to speed up booting on STs, where AHDI 6.06 is incredibly slow.

AHDI 6.05c was a Beta version and shouldn't be available at all. I recall it to be quite buggy.

You are right, MagicMAC is not able to read non-standard Atari/DOS disks.
You either have to reformat the disks to 9 sector standard 720k format or
to copy them to standard formatted DD or HD disks.

I want to know how to program Asteroid type ship movement.

I've cobbled together the following in PowerBasic on an STE,
I think it works ok, but I'm not sure, as I don't understand how
the math (I never did trig stuff.) bit works, I was hopeing that
perhaps someone(s) here could look at my code and say if I have
made any mistakes, and whether it does actually work 100% like it
should, and if there is anything I could do to improve it at all
in the ship mechanics department.

I gather that NZ is currently short of specialists (especially in the IT area) This raises an important question:
Is is that they are all terribly boring idiots like Rog
or
All the intellectuals have pissed off because of people like Rog.

We have to ask ourselves some more questions :

1) Is Rog a typical example of a NZ gov employee - in which case what does he do?

2) If he isn't why aren't the good people of NZ complaining about somebody who obviously has nothing better to do in work time that to browse on the net.

PS : I would love to be able to post it from work but :
a) I don't have the time to arse around at work
b) The Home Office has imposed an air gap policy on network access - Hey maybe if we can convince the NZ gov of this we could get rid of Rog for ever.

gmiller@inca.co.nz (Gaven Miller) writes:

>The speedup from ST-RAM (which is 16-bit "slow-RAM") to TT-RAM (32-bit
>"fast-RAM") is approximately 50%.

Actually, this is not completely correct.
The ST-ram is slower but that's due to the fact that the CPU must share
it with, most notably, the videosystem. TT-ram is not used by a.o. the
videochip and thus the CPU can acces it faster, it doesn't have to wait
for other chip's accesses. this has nothing to do with the speed of the
ram itself, both ST- and TT-ram need 70 - 80 ns IC's.
And, most important, the ST-ram has an 24-bit *Adress*-bus for
compatibilityreasons, but the *data*-bus is not 16, not 32, but 64-bit
wide (to the video-subsystem). The CPU itself has a normal 32-bits bus to
both ST- and TT-ram. You will note that ST-ram access-time increases
with the size of videoram in use (compare st-high, 32 Kb to TT-mid, 152
Kb.) Depending on such factors the difference between TT- and ST- ram is
about 15 % - 35 % (Not 50 %).

>If you get a good TT-RAM board, with a
>good set of RAM on it, the speedup can be even greater. The standard
>Atari TT RAM board is a little more sluggish than third party boards, but
>is still quite a bit faster than ST RAM.

Never noticed this speed increase, IMHO I don't think it could be there.
The speed is *only* dependant on the clock-speed of the whole system.
However, third-party board *are* way better than the one atari made.
More flexible in configuration.

According to the latest TOAD catalog, the "Compo STE Power CD #1" contains
the full version of SOFT PC as well as a lot of other stuff, obviously....

TOAD lists the CD at $34 (US).

I would like to contact people that are successfully using this old laser. We set it up to print under LQ emulation, and using that driver in Calamus. But it breaks the picture into wide bands in SL and puts a very fine "venetion blind effect" thru the picture with the older Calamus 1.09. The printer has 1/2 meg memory. We have run it off a 4meg STFM or a TT030 8meg. I am unclear about the memory requirements of the printer with an Atari,(I know the Atari writes up the page itself) because it still has to dump the page down...
And no... the problem is not that we are using (we are not) pirated software as one source in Australia has suggested... Those with technical knowledge, I would appreciate you comments. It is suggested we simply don't have enough memory in the printer...

Thanks for your help.

Hi There,

Before my hard drive recently crashed (thanx everyone for your help), I had some source code to detect a carrier on the serial port. If someone has this code, could they post it ... if I remember correctly, it was once line of code ... some long peek somewhere in memory.

ALSO ... GemDos ...
Can someone post a list of all the Gemdos commands and what they do?!

TIA: Thanks in Advance - thADVANCEanks

Hi all.

My ATARI MEGA2 has a built in real time clock which 6 months ago
stopped working. It shows the date 06/04/89 every time I start
the system.

New batteries won't do.

Anyone any suggestions, hints?

Thanx a lot.

This is a brand new computer which was bought new in March 94. Unused, It was going to be my second TT but I think one is actually enough. Since it is a brand new machine bought new from a authorized dealer it may have a warranty, but you are dealing with Atari on that. They say they havn't sold any in quite a while, but the store promised to honor the one year warranty period.
But this is probably moot since it is a nice new computer w/the last roms that they developed and all that. I'm not sure what it's worth but I guarantee I'm not keeping it. However it's not too hard for me to ship it to california to sell on consignment at ATY computers so don't bother sending free, how about $200 offers.
Also, let me know if anyone out there would like to pay for a new Atari 19" monitor or my burned in one, either wtih or without the computer let me know. I am looking for a cable that goes between the two, BTW. If it comes to a sale I'll give you mine though so that you'll have the cable.

Skip technical specs....

Atari TT030 of course with and neverused ttgray mouse (special) and a very nice keyboard, also fresh from factory.

In a previous article, dekker@fwi.uva.nl (M. Dekker) wrote:

| The ONLY
| bad thing I have seen has nothing to do with the pc hardware, only with
| DOS (I only use dos for games, linux for everything else). I get a lot
| of games complaining about not enough base memory. commenting out 1 line
| in autoexec.bat usually solves that problem.
|
| most people in this forum should learn to distinguish between the
| pc hardware and dos. they are really not the same.

Fair enough, but I wasn't bashing PC hardware, per se; rather the entire architecture of the box which includes the hardware and OS. With a decent OS (and Win95 will *not* be that, IMHO) many of my complaints about PC's in general would logically disappear.

But my original comment stands... modern machines should be intelligent enough to reconfigure _themselves_ when adding new software or hardware. If the user wants to fine tune the system, that's fine and dandy. But he shouldn't be forced to do so. In this one respect Macs (and Ataris) are far easier to work with than the typical PeeCee. OK, OK... IMHO.

| I have a 486dx2/66, 12mb ram, 500mb hard, cd-rom player, soundblaster16.
| I never had to do anything with irq's or whatever there is.

Just what I used to own. I always found it frustrating that even though I had 16Mb RAM I had to be concerned with the '640Kb barrier.' Brilliant system design, eh? ;-) And my experience installing a new CD-ROM and a Gravis UltraSound card was neither pleasant or speedy. Granted, if you buy a system pre-configured and never change it you could avoid a lot of potential headaches. But hey, that's no fun, is it?

But I don't want this to turn into a MCIBTYC argument. Each machine has it's good and bad points. It's important to be happy with your choice, but what other people choose should have no consequence to you.

Enjoy,

-Hutch- @ Fair Dinkum Tech

Well, I bought a TT second hand and it came with 4 MB of ST RAM and 4MB of TT fastram. Essentially every program has some "flags" in the file header, you can change these with a replacement desktop such as EASE, one of the many p.d. utils available or one of newer TOS desktops. The flags allow you to decide wether the program will load into TT RAM or ST RAM, and whether it uses RAM from either ST or TT when it runs. I've upgraded my TT RAM to 16MB, so I tend to run my accessories, utils and memory resident stuff in the ST RAM (except for NVDI and MAGIC which run about 60% faster in the TT RAM). Basically the newer GEM software should run fine in TT RAM, try setting malloc (use memory pool in TT RAM) and load prog in TT RAM first. If it doesnt run, change the combinations of flags! Some programs will grab every bit of RAM they can, regardless of the flags! e.g. Calamus SL needs to be set up carefully as it manages the TT RAM and ST RAM itself. More info neede? Email me sometime....

The following items are for sale :

Eizo 21 inch FLEXSCAN 6500 professional display system

This is a beauty and a beastie! A 21" fst greyscale display, absolutely stunning picture, used for Cubase and DTP in conjunction with the graphics card (below) or can be used with a PC, MAC, Atari TT in TT high resolution mode and all other modes!, graphics cards etc... There are a host of inputs including ECL, comp.vid and separate H-sync Vsync etc... The monitor goes upto 1640*1200 pixels, and handles refresh rates from 50-90 Hz. In absolutely immaculate condition, very little used, as new! Boxed. Cost around ï¿½1299. Offers around ï¿½650.

Reflex 1024 graphics card with STE interface kit & NVDI

A mono graphics card suitable for STE or Mega ST computers. Max. resolution is 1024*1024 at 80Hz, comes with software to adjust rez to watever monitor you use. Can be used on SM124! vga, svga etc... Compatible with all good GEm stuff, great with Cubase, Notator logic, Calamus, Papyrus... Cost ï¿½275 with adaptor, sell for ï¿½100.

Also ;

TT 4MB fastram board (original Atari one!) - ï¿½60

It is a bit odd I'll admit. The playablilty is 'different' to that of the 8 bit version (which I have also played0 - but the ST version had some neat graphics. I agree about the GEM for everything - though I don't remember it being too slow. In some ways I actually liked the sedate game play ;-)

Message-ID: <DC13w5.1uo@cf.ac.uk>
Source record: 161971

Hi there!
You might me interested if you've got an STE in the graffitti genlock unit. I've had it for around 6 months but sadly I sold my STE for a TT and its now looking for a new home. It allows overlaying of graphics etc on video, transparent or opaque. Only needs a small program to set the sync on computer, works with any software in low or med. rez! Cost me ï¿½250, but as I can't use it any more it's offered at ï¿½125!

Well I'm very into video myself, and obviously have been searching for suitable stuff. I recommend the Video Supreme package from Goodmans, a excellent title generation and fx program (if you use a genlock or simply direct the video output of your ST to a video recorder). I also find microdeals Videomaster cartridge system absolutely fab! It's a video and audio digitiser which captures full 25 fps video in 16 greyscales ! Obviously it's no good for producing a film, but when inserted with live video footage or overlayed with the genlock, it's possible to produce some incredible effects! It has a video editor with frame clips, speed control, well put it this way, for ï¿½50 it's cracking.....
Cyberpaint is also recommended for animating titles and pictures, you can produce some great twirls and swirls! Also check out Aegis animator (p.d.) and Kozmic 4.
To control your hardware, well not much about unfortunately.

1015. Atari STE genlock for sale...

Newsgroup: comp.sys.atari.st

> happened to it.

SMS2 - a Sinclair QL OS clone - was indeed created by Furst. My brother uses it monchrome on my old ST but if you have a Mega STE or a TT and a QVME video card you can run it in colour - and boy oh boy does it shift (it's hand coded 68000 m/c). Using fully re-entrant code and built of "things" it seems very, very stable and makes you realise what a slowcoach GEM is.

It is, as far as I know, still a going concern : my brother is going to be contacting them soon to see if they are interested in making a Falcon version that can take full advantage of the Falcon's video system.

SMS exists in various forms including a version for the PC QL card (the QL version of Gemulator). As an interesting aside one of the companies still supporting the QL is considering building a multi processor 68060 board.

A while back a new OS appeared called Omen - this looks like a rather poor version of SMS2.

If anybody is interested in SMS2 please let me know and I'll post the address of Furst in here.

Steve

C>I am interested in the Medusa clone. I understand they make a 68060
C>version. What company makes it and how much are they?

The Medusa T60 isn't available today! I have just phoned with Fredi Aschwanden, the developer of the Medusa. His adress is: Medusa Computer Systems, Buchhaldenstr. 16, CH-8610 Uster , phone: Switzlerland (0041?)-1940-9254. The actual price he told me for a T40 (68040) is 5390 SFR including 8 MB Ram, ~500 MB Harddisc, ST-I/O-Card, Tower. But you can deal with him :-)

I own a Medusa T40 and i am very happy with this computer!

Greetings Thorsten

>something).

There'll be a file on your disk (forgotten the name) which will tell
idcheck to skip the address, also one of the ICD proggies should allow
you to set which devices are skipped and which aren't (i.e. it edits the
file for you.. wow). Been a while since I used ICD stuff but I think
that's right..

I don't own a TT, but from what I've heard about the TT-ram I've always
assumed it supported burst mode access. Do you mean that's not so?
(Yes, I know it's an Atari computer, but still...)

If it did support burst mode the speedup for certain operations should be
very significant. 100-200% would not surprise me at all.

Let's hope the Barracuda handles burst mode!
I'd really like to speed up my Falcon by a factor of eight or so... :-)

Where can I get the auto program "Fuji-watch"?
It's the normal spinning fuji, but with a clock that goes in place of
the busy bee.
Which ftp site/directory?

Now try the same with the GEM-line commented out. You'll see what I
mean. I want to run MiNT without MultiTOS.

BTW, I still get two bombs.

Regards,

Hi,

I have several pieces of Atari ST software for sale, if any body is interested.

They are:

GFA Basic Version 3.5
GFA Basic Compiler for the above
GFA Assembler

STOS Basic
STOS Basic Compiler
STOS Maestro + Cartridge

If anybody is interested, then please mail me an offer for the above.

Matthew

1053. Is Chimera the beginning, or the end...

Newsgroup: comp.sys.atari.st
Date: 1995-07-21 00:00:00 UTC
From: jws4p@fermi.clas.Virginia.EDU
Message-ID: <DC1pst.FDs@murdoch.acc.Virginia.EDU>
Source record: 161907

First of all, my hats off to TAF for putting together their internet GUI package... although I have yet to even obtain and install it, I am anxiously trying to find the time. I just wanted to say though that I hope this is only a temporary solution to the problem... before TAF, there was a lot of talk by programmers and anxious end-users about developing a graphical WWW/etc. browser for the Atari, written FOR the Atari. As I understand it, Chimera is a graphical browser for the UNIX windows environment X-Windows, and to run X-Windows on an Atari you need to first install the MiNT operating system. Correct me if I'm wrong on this, but this seems to be an awful lot of overhead, going through two shells, just to run a graphical browser that communicates through SLIP, reads hypertext, and can display GIFs. This leaves people with 4 meg machines just barely able to run the package, and apparently they cannot handle "graphically intensive (>= 10K GIFs!?!??) web pages". I hope that some of the ambitious and talented programmers out there who were talking of writing a graphical browser specifically for GEM/TOS will not give up just because Chimera is out there, relatively easy to install. I've seen a lot of great Atari software out there, programs that were more efficient and could outperform their functional counterparts on grossly superior Microsoft/Intel machines. I'm sure that a graphical browser written and optimized specifically for Ataris instead of UNIX could be far superior to whatever interim solution we may have. Anyway, if anybody out there needs encouragement or motive to pick back up whereever you left off, count me as the first in line to register and pay top dollar for an Atari specific, trouble free internet GUI.

Good luck,
John Stanmeyer

Yes its because I tell the truth, if they can't bit the bullet
and go and buy a Real PC..

John Townsend came on here and told them to stop wasting time on the craped
out Atari and the out of date OS...

Gee then came out the knifes, nasty little people these Atari addicts...

Seems like that have to defend the Crappy Ataries and till they die...

If they don't like the PC they can go for the Amiga or the Acorn...

Most TT RAM boards can be configured to access using either burst mode or
nibble mode. _Most_ standard SIMMs are nibble mode; configuring the board
for burst mode access won't work properly with standard SIMMs. However,
if one takes the time to ensure they obtain burst mode SIMMs, the speed
increase can be measurable.

Hello android ! The 20.07.95 you talked about "Reading MS DOS hard disk.",and
my reply is:

> But just today, someone told me that a patched AHDI 6.061 can reconized
> size upto 2 gig.
>
> Does anyone have more info? Where to get this?

-*-Kockens BBS-*- HD-STUFF -*-Kockens BBS-*-

AHDI6061.ZIP [16] AHDI v6.06i - Latest Update

AHDICONF.LZH [16] Config the AHDI driver to suit your needs.

HDX504.ZIP [12] AHDI 6.06 and HDX 5.04

HD_CTRL4.ZIP [6] With HD_Patch you can edit the patchable variables of your
Atari AHDI hard disk driver.Only AHDI versions 3.00 and above may be changed.

Is any of the above at any interest ?? In that case i can send them to you.

Either that, or use btoa, or a file transfer program like rz/sz, the
latter affording error free transfer.

Recently MicroTalk reader went on a rampage, trashing a bunch of replys and itself too. It's pretty buggy, and I've always meaning to try out Mountain Reader II, so I havn't bothered to download it again, I downloaded MRII 2.8 demo from a.a.u.e, and when I decompressed it, it got down to MRII.PRG and gave me a "bad table, or encrypted file" error. Thinking something got screwed up during the download, I downloaded it again! Same thing! Just for the heck of it I tried downloading it using Xmodem-1k instead of Zmodem. Same thing! (I never had any CRC errors during any of the downloads) Well, I had to get some messages read, so I downloaded Kivi 1.41, when I decompressed it, it got down to KIVI.PRG, and gave me a "bad table, or encyrypted file" error! So I downloaded it again, same thing! Tried Xmodem-1k, same thing! By then I was pretty ticked, so I connected with Hensa, downloaded MRII, same thing! Downloaded it again, tried Xmodem-1k, same thing!!! ARRRGGGGHHH!!

One choice that doesn't require MiNT is the KA9Q package. This is a port of a DOS program that supplies FTP, TELNET, NNTP (news) reader, etc. However:
1) this is a TOS program. No GEM menus.
2) this program does not supply any networking facilities to any other program. No Web. No NFS.

If you want more networking than this, you'll about have to go with MiNT. Get the TAF package and install it.

1094. Latest MS office with Spectre?

Newsgroup: comp.sys.atari.st

Duh - er... I've got a $450 ET4000 card installed in my VME bus on my M4STe. It's true color, but unfortunately, it only has one meg on board. It is quite expandable, though. I like to run it at 1024*1088*256 when multitasking, or 640*480*16M when doing stuff with graphics. The only thing I don't like about the thing is that it didn't come with any documentation, which is a petty... I want to make a driver for the card in my OS. And I'd even use text mode. Anyone out there with SVGA documentation? ;^)

1097. Atari 1040ST System Sale

Newsgroup: comp.sys.atari.st
Date: 1995-07-21 00:00:00 UTC
From: klassa@aur.alcatel.com
Message-ID: <3uopo9$r9c@aurns1.aur.alcatel.com>
Source record: 161999

I have an Atari 1040ST, mouse, color & mono monitors (i.e. two monitors) for sale. (I've also got a Supra 20MB hard drive for sale to go with it... Someone has expressed an interest in the drive, but no commitments have been made).

The computer, mouse, color monitor & drive are in great shape; the mono monitor tends to flicker occasionally. The best offer over $250 (you pay shipping) takes the works. If you think that's too much, make me another offer.

Thanks-
John

COMPLETE COMPUTER SYSTEM FOR SALE!

Atari 1040STf -- 1MB RAM, Internal Floppy Drive, Mouse
Atari SC1224 Color Monitor w/ Speaker -- LIKE NEW! WORKS GREAT!
Star NX-10 Printer -- with extra ribbons, paper & labels
Printer Stand -- adjustable, fits many printers
1200 Baud Modem -- with power supply & manual
Power supply & cable for external floppy drive (ext. floppy not included)
External clock with software
ICD SCSI Plus hard drive card (hard drive not included)
Extra Mouse
Joystick
Includes all cables, disk boxes, & extra blank floppies

LOTS of software -- almost 200 floppiesï¿½ worth -- such as:

Word Writer ST (word processor)
Data Manager ST (database)
Swift Calc (spreadsheet)
Interlink (telecommunications/modem software)
Degas (drawing)
Dungeon Master (game)
GFA Basic (programming)
Lattice C (programming)
and LOTS more!

Great student computer! $350 OBO, you pay shipping (I have original ST
box to ship CPU in).
Please respond via email! Thanx!

1099. MIDI Software

Newsgroup: comp.sys.atari.st
Date: 1995-07-21 00:00:00 UTC
From: Just Intonation Network <jinetwk@dnai.com>
Message-ID: <3unv93$qsa@hilbert.dnai.com>
Source record: 162001

Does anyone still write new MIDI software for Atari ST?
I would like very much to get a sample editor that works
with my new Ensoniq ASR-10, but I very much fear that no
such thing exists. Any ideas?

My 1040 STE has served me faithfully as a MIDI controller for
7-8 years, and I have no desire to replace it with with a Mac
or PC, but new software development for this platform has
gotten mighty scarce.

Graham Irvine (graham@grasper.demon.co.uk) wrote:

: A few months back there was a lot of talk about the Atari version of
: insignias Soft PC ... What was the conclusion on this ,have they made it
: available or not ? I have found some upgrade and patch programs around some
: ftp servers but never the actual program itself ?
: MHYG
: Graham

Two more questions:

- Does it run on a 32MHz TT030 with graphics bord (Crazy Dots II or
Matrix Matgraph C110ZV) and 16 MB TT-Rmam expansion?

- Is it available via ftp somewhere, too, or only on CD?

Jens

P.S.: Please, e-mail a copy of your replies in this newsgroup - I can

Hello,

abaout a year or more ago I could read the author of MOLSYS,
Robert Mellish, in this newsgroup. I would like to contact him, but I have not heard
(better: read)
anything from him. Could some please give give me a hint where to
find him?
Maybe Robert Mellish reads this article himself? Please e-mail me.

MOLSYS was a very amazing molecular modelling program, unfortunately running
only on STs only in monochrome resolution. R. Mellish has publicated as
latest version 0.74, as far as I know, and wrote (a year ago) something
about further development.

Regards,

Jens

P.S.: Please, e-mail me a copy of your answer(s) to this newsgroup. I can not
read this group regularly. Thanks.

Funny, I don't see any MIDI ports on my Qudra or 486. Even my ole
ST has those.

I wasn't even able to purchase Atari World this month as it seemed to
have a one page paper shortage. FYI STF and AW in the U.S. cost me
$14.50 ea. but I still camp at the mail box when there due. :)

I haven't noticed any problems with CPX configuration. I think the
problem your experiencing is the "speaker on" syndrom Falcons have
at boot up. There are some auto-folder programs that turn the speaker
off at start-up, or as in my case, you could pull the plug from the
internal speaker. I don't recall the exact name of the program,but i'm
sure someone here will post it.

Good Luck

Mike

So the New C-LABS MK I Falcon is not dearer that the Atari priced one,
well at 799 pounds it is, if you don't like this then go buy a PC,
far far cheaper and better suport..

Just don't pick on me for posting the TRUTH....

Their was a lot of Rubish posted here about C-LABS bring out a
299 pound Falcon and I stated that it would never be, nothing ever
come cheap out of Germany....

Does anyone have a copy of First Word Plus that you don't use anymore?
I'd like to buy it off of you. It needs to work on my TT, though, which
means that it would have to be something like V3.20 or something later.

I sold off my v.3.0 two years ago and I regretted it ever since.

Hello,

I've decided to sell my STacy 4 because I just don't use it enough.

Atari Portable STacy 4
4 MEG RAM
52 MEG SCSI internal hard drive
720 3 1/2" floppy
External Power Supply
Corduroy/nylon carrying case with handle and shoulder strap
Has standard ST ports. MIDI, Parallel, Serial, Mouse, Joystick, DMA, Monitor
Has built in track ball, but if you wish you can use a mouse
Has built in backlit LCD 640x400 mono screen.
You can hook up either an external color or mono monitor.

Unit is in great condition and works fine. Asking $700 or best offer.

E-mail me or call 216-729-0761 evenings 6:00 - 10:00 PM EST

My guess? The recent surge in technology stocks in general. My employer, GTE, has also had a very nice surge in price recently. Which suits me fine - I'm in the employee stock purchase plan, and the price has risen nearly $10 from the price I locked in at 6 months ago!!!

1119. Atari Community E-mail List

Newsgroup: comp.sys.atari.st

The Atari Community E-mail Address Book
Revised 21-Jul-95

Hello all! Those of you on Delphi know I just posted an update less than two weeks ago. So why another? Well, BEFORE I could post it to the internet, I found several mistakes. Plus I also had a couple nifty additions that popped up. Anyways, here it is!

This list has been compiled to provide Atarians worldwide with the addresses to contact other members of our ever-changing Atari community. There are 4 distinct sections - user groups, Atari computer contacts, Jaguar and Lynx contacts, and World Wide Web pages. Please note that for addresses that are of interest to both Atari computer users AND Jag/Lynx owners will be found in the computer section.

Using this list -
I created this list to encourage communication between Atarians everywhere. If you have a question without an answer, or are moving soon and need to find a new user group, this list should help. It is also a great way to distribute Atari related press releases, such as upcoming Atari shows and new product announcements. And I would LOVE to see user groups sharing newsletter articles via these addresses! However, it SHOULD NOT be used as an advertising tool. If you are a retailer looking to advertise, please contact the individuals on the list and ask if they want to receive your mailings. Some people must pay for their e-mail by the character and would not want unsolicited commercial mailings.

If you have any changes, additions, or suggestions, please contact me via private e-mail. My addresses are listed under AUNT.

Dan Mazurowski, AKA Sir Smedley
Semi-official e-mail contact for AUNT

PS - This list may be printed and distributed at will, though I would like credit for compiling it.

PPS - Will the guy who sent me the address of the group in Tasmania, Australia please send me the address again? I lost it! (Sorry!)

1125. 1 Mb STfm & more for sale

Newsgroup: comp.sys.atari.st
Date: 1995-07-22 00:00:00 UTC
From: jws4p@fermi.clas.Virginia.EDU
Message-ID: <DC4z2y.KKy@murdoch.acc.Virginia.EDU>
Source record: 161877

For sale:
Atari 520STfm, upgraded to 1mb memory.
Internal 720K disk drive. TOS 1.0. $100.
Monitor not included. Has RF hookup though.

Also for sale:
Eureka battery-backup cartridge clock, $20.
ICD Link DMA<--->SCSI adapter w/ software. $75.
Mouse Master switchbox allows mouse and joystick on same port. $15.

Also for sale:
60mb Seagate 5" MFM harddrive with ADAPTEC SCSI controller card and ICD ASCI card to connect to DMA port on Atari. As harddrives go, this one is relatively slow, but still will give totally new life to a floppy-only system. Includes ICD softare, power supply and fan, but no case. It is currently "mounted" in a cardboard box which obviously cannot be a permanent solution. Drive is currently partitioned into 3 drives, and is loaded with public domain productivity software, games, pictures, sounds, and more. Ready to plug in and go. Asking $100.

Software for sale:
Timeworks DTP, Timeworks Wordwriter ST, Spectrum 512, Microsoft Write for Atari, many more, all original disks with manuals. Email offers or inquiries.

Email me at jws4p@fermi.clas.virginia.edu

By the way the reason I'm selling all of this is that I now have a Mega STe. The software is stuff that I no longer use much.

Date: 1995-07-22 00:00:00 UTC
From: wells_s@kosmos.wcc.govt.nz
Message-ID: <3urop7$2ua@golem.wcc.govt.nz>
Source record: 161879

A friend opened up his 4meg Falcon, and took out a board, which he discovered had a 72-pin SIMM in it. This is a new Falcon with no mod's done, so, can he just stick a 16-meg 72-pin SIMM into it and get the 14meg? Or is this some sort of abnormal Atari design?

> find out if the board/simms are configured for burst mode.
>
> ps I am not a super tecchie so you might need to keep it simple :-)

Hmmm.... gotta remember how to do this; I found out after calling one of the techs at Toad Computers a while back, so if what I tell ya here doesn't work, call them. :) Also, this is only for the Atari-brand TT RAM memory board which accepts four each of either 1 Mb SIMMs or 4 Mb SIMMs for either 4 or 16 Mb of TT RAM.

If I remember correctly, when you look at the TT RAM board itself (not the SIMMs), there should be a cluster of jumpers just to one side of the SIMM slots. These jumpers are numbered 101 thru 106 and set up like so:

104
101 102 103 105 106

I believe jumpers 101, 102, and 104 control whether the board will address 4 Mb of memory or 16 Mb of memory. Jumper 105 controls whether the selected memory space will be addressed in Nibble mode or Burst mode. Jumpers 103 and 106, as near as I can tell, are left over from an Atari engineer's long night of drinking. :)

I happen to know that the 4 Mb SIMMs in my board are standard, but tried selecting Burst mode just to see what happened. During the memory test conducted at boot-time, every bit of TT RAM displayed an 'X', or an error, and the system tended to crash every time that pesky desktop was displayed on the screen.:) So, I surmise that the SIMMs in use must be of the appropriate type in order to use a particular addressing method.

Again, if you're antsy about how good my memory might be, give Toad Computers a call and ask 'em your questions. I've found everyone there to be extremely helpful over the years.

Good Luck!

has anyone ever used a 19" monitor on a falcon?
is there any 19" that support both color and mono?
please let me know..

does a Moniterm work on a falcon?
can the falcon be modified to make it work?

how about the atari tt194 (i think this is the model number of this)
anyone know how much they go for and if they will work?

thank you

However, you can install Oasis over the top of it, which
replaces the offline parts of the KA9Q package and gives you a
nice GEM interface for mail and news.

1141. HELP ME WITH MY SM124

Newsgroup: comp.sys.atari.st
Date: 1995-07-22 00:00:00 UTC
From: Steve.Dent@p5.f510.n256.centron.com
Message-ID: <30290c3d@p5.f510.n256.centron.com>
Source record: 161893

ibkeegan@tcd.ie wrote to All:

i>
i> i managed to dig a sm124 out of a skip!
i> the power goes on and all , thing is i dunno
i> how to wire the cable to a 13-pin DIN plug
i> as i dont have diagrams etc...
i>
i> can anyone help me please?
i> there are the following cables:
i> green, red, yellow(audio?), 3 black , and a clear one.
i>
i> ian
i>

I have a SM125 monitor and the wire colours are different to what you describe, you may have to remove the back off the monitor to identify the function of each wire....

SM125 monitor

Wire colour Function Pin Number PCB monitor
-___------- -___---- -___------ -___-------
Brown Audio 1 A
Red Mono Detect 4 n/c
Green Horizontal Sync 9 HS
Gray Video output 11 Video
Yellow Vertical Sync 12 VS
Blue Ground 13 Ground

The Red wire (Mono Detect) takes this pin to groung to inform the computer that a Hi-rez monitor is plugged in and could be done within the plug.

Hope this helps.....

1142. ICD AdSCSI+ clock problem

Newsgroup: comp.sys.atari.st
Date: 1995-07-22 00:00:00 UTC
From: Steve.Dent@p5.f510.n256.centron.com
Message-ID: <30290cf6@p5.f510.n256.centron.com>
Source record: 161894

jat5@york.ac.uk wrote to All:

j> I've got a problem with the real-time clock on my AdSCSI+ host
j> adaptor... My ST just won't recognise it - 'IDCHECK.PRG' skips over the
j> SCSI address of the RTC with the message 'skipped by IDCHECK' (or
j> something).
j>

'Skipped by ICD BOOT!' is the phrase you refer to, you have managed
to tell your hard drive boot program to skip that particular ID, you need
to reconfigure the ICDBOOT.SYS file on your hard drive....here how....

Run the program called HDUTILS.PRG....when loaded select the option called
CONFIG, this will bring up another screen, at the top you have three
boxes,
select the one marked C:\ICDBOOT.SYS, this will load in your current
configuration, near the bottom of the screen is an area marked 'SKIP
ID(s)'
and a set of numbers, any number in inverse video is deselected, click on
it to reselect it, you should have numbers 0 and 6 enabled, (Real time
clocks are normally ID 6, but check), you can leave all ID's enabled, it
won't harm anything, now SAVE the set-up back to your ICDBOOT.SYS on drive
C:\ the computer will tell you to re-boot to load the new configuration
and you should have your clock back, I presume you have ICDTIME and
TIMESET programs to alter and load clock data respectively.

m> knowledge, I would appreciate you comments. It is suggested we simply
m> don't have enough memory in the printer...
m>

You are quite right pirated software has nothing to do with it....the problem is your printer driver not being totally compatable with your printer.

Calamus dumps the entire page to the printer before the printer prints the page....if you have insufficient memory in your printer, then when the memory is full the page will be printed but you will not get a full page, it depends on the size of memory in the printer and the content of the page. You may get half a page or even a quater of a page, Calamus SL pages
with a few images work out roughly about 1meg but it really depends on the page content as to it's size. With 1/2meg of printer memory you will need quite a lot of 'white' area to print a full page.

The banding "venetion blind effect" you mention is down to your printer driver, load your printer driver into the Calamus driver generator and alter the paper feed with the (F)EEDSET option to get rid of banding effects.

Cheers

So, MICROPROSE will port their COLONIZATION (sequel to Civilization) for AMIGA 500 and 1200.....

And guess what those bastards will tell us?

"Your Ataris couldn't handle this game, so sorry - and forget it.."

I guess, it's the time for another letter campaign???

I, for one, WANT that game. Are there others who feel the same?

For Amiga 500... Good grief!

Tommi

Wenn der Falcon am PC-Netzteil im Tower Geh=84use nach dem einschalten
nicht stabil l=84uft oder sauber bootet, einfach den 1uF-Elko (C7 auf dem
Mainboard, in der n=84he des Resettasters), der mit dem Pluspol direkt mit
einem Kontakt des Resetschalters verbunden ist, auf 10uF vergr=94=9Eern.
(4.7uF statt 10uf reicht meist auch)

I cut this from Michael Ruges document on the Falcon 030,
Chips.172. I basically says that if you have problems with
the reset button after mounting in a PC tower case, replace the
capacitor with one mentioned in the text. Chips.172 has more infor-
mation on the Falcon and other Atari computers that is very useful.
I think I FTP'ed it from one of the German Universitys. Highly
recommended.

Mike :)

SinPlop,

Make sure you tell everyone that when they try to install "some"
video cards in "some" Macs, that there is an interference problem
that must be delt with. So much for plug and play. Why is it that
my whimppy little Falcon can drive an Idek 5017 with no mods, and
"standard" Macs need a "special" card to do this?

Mike

1149. FAST hard drive for Falcon..!

Newsgroup: comp.sys.atari.st
Date: 1995-07-23 00:00:00 UTC
From: thietavu@news.abo.fi
Message-ID: <3us8cq$d9s@josie.abo.fi>
Source record: 161802

I just installed SEAGATE ST5560A IDE-drive inside my Falcon, and IT FLIES!

Seagates don't have the best reputation, but this is something:

2.7 MB/s (How Fast test program)... =-)

The previous Seagate model with slightly smaller capacity, only (?) transferred 1.7 MB/s - so this 5660 is a lot faster, though the average seek time is the same. And this speed really helps things to be done: virtual memory works almost fast enough, and AUTO-folder screams ;-) ...

I guess, this is about the fastest data transfer rate I've ever heard to be measured on Falcon. The only downside is this: ST5660A requires a small program to AUTO folder, to prevent it from automatic shut-off when unused... This drive even fits inside Falcon's original case (smaller than most 3.5" drives)...

I recommend strongly!

TH

1156. Atari A to Z book

Newsgroup: comp.sys.atari.st
Date: 1995-07-23 00:00:00 UTC
From: msbaines@cix.compulink.co.uk
Message-ID: <DC6BrL.2Kv@cix.compulink.co.uk>
Source record: 161809

As reviewed in Atari World, ST Format (91% and Gold Seal) and an excellent review in this month's ST Applications.

The Atari A to Z
by Mark S Baines

Jargon, terminology and acronyms are the staple diet of any professional, technologist and hobbyist. The world of computing is no exception and to the uninitiated home or small business user, magazines, manuals and books can be very daunting. Written by someone who understands these frustrations and needs, The Atari A to Z is an encyclopaedia of modern computer terminology specifically pertaining to Atari computers.

Whether you play games on an ST, run your business on a TT or write music on a Falcon, this book is aimed at helping you get to grips with magazines and books that are more perplexing than enlightening. In it, you will find definitions, explanations, mini-articles, tables and lists to help you gain a better understanding of your Atari computer. The material in this book was written with all Atari users in mind. There are simple definitions for the uninitiated and technical data for the experienced. You take what you want, when you want it.

The Book
The Atari A to Z is produced in A5 format, 340 pages long and contained in a quality ring folder for convenience. It contains 2,238 entries, 101 tables and 128,000 words. There are five appendices - Addresses, Book List, Connectors, Extensions, Atari ASCII set, ANSI Character Set. There's even a page of known errata!

Firstly, this is a comprehensive general computing dictionary, there being entries for all the common terms and acronyms found in modern day computing. Like any computer user, Atari users require help with terms not specific to their particular machine. They should be able to find what they want here.

Secondly, there are entries of Atari-related terms and acronyms which cover all the Atari computers and consoles. There are expanded explanations and essays, tables and lists which together form a comprehensive inventory of material that The Atari Compendium left out and not found elsewhere. The table of System Variables is more accurate than that in The Atari Compendium. There is a list of Exception Vectors, Atari Cookies and their meanings, Memory Maps for all Atari computers (and more accurate than that in The Atari Compendium), a full Breakdown of the DESKTOP.INF and NEWDESK.INF files (not found in ANY other publication), Errors Messages and Bombs, Pin

Connections of all the ports on all the machines, Technical
Specifications of the whole Atari range, a Breakdown of the TOS
Versions and the differences between them, an explanation of GDOS,
MultiTOS, the VT52 emulator and codes, all the main chips, viruses, a
light-hearted look at computer laws, a list of common file extenders
and their meanings, a list of contact addresses, a bibliography...
this is just a little taster of some of the important aspects of this
book. The Atari A to Z is thorough!

Availability
The book is only available from:

Linnhe Computing
Linnhe, Shore Street
Inver, by Tain
Ross-shire
IV20 1SF

Price
UK
The cost is a very reasonable £12.50 including postage and package.
Payment is by Cash, Cheques (drawn on UK banks only) and Postal Orders
only. Cheques must be made out to "Mark S Baines".

EEC
Including postage - total £14.10

US and Canada
Including postage - total £17.00

Australia
Including postage - total £18.10

PLEASE NOTE: Only UK cash, cheques and postal orders (available in
Canada and Australia) are accepted. DO NOT send anything else! Ask
your bank about the *cheapest* way to send UK money to the UK for just
send cash safely wrapped to avoid detection.

My thesis goes in on Thursday and I should be getting Lattice C 5.6
any day now - once that's all done I will start a native GEM WEB
browser. The first version will require Mint/Mintnet but not
MultiTOS or X - this should keep the memory overhead VERY low.

For Fucks sake Rog - give it up. If you have nothing of use to say then piss off.

How many times do you have to be told : this is an Atari group where people who like and use Ataris can swap information and advice.

If you want to simply take the piss then there are groups for people like you.

Your "advice" to go and buy another computer is a pathic and stupid thing to say in this group. Despite what you may think the people in this group actually like the computer they are using and don't have to sink to such pathetic levels to keep themselves happy.

I use PCs at work, and a 250Mhz Dec Alpha (which pisses on Amiga, PC, Acorn, Atari etc) but am very happy to use my Falcon too.

The Atari range has its faults - which we should all be ready to admit - but then so does any other computer system (have you ever tried playing Cilization on a Cray?)

Steve.

MH> what am i doing wrong here? thanks in advance, M.C.

Probably got the System Information CPX IIRC part of NVDI loading aswell as
the GENERAL.CPX which is the one you are looking at to switch off the speaker
and keyclick. SI also has switchs to set boththe above aswell.

Do you use a bootmanager ? (i.e xBoot or Stoop) If you do then it should
switch it off but might not if there is already an si.cpz . If you don't and
it is not showing in the control panel it may be due I think to a bug in
Xcontrol which sometimes does not display CPX's .. move it manually out of
the cpx folder.

You don't know the truth Roger, so why don't you just shut up, or perhaps
discover the truth before saying anything more.

>
>John Townsend came on here and told them to stop wasting time on the craped
>out Atari and the out of date OS...

Aha, so John knows the truth then.. Sorry but no!

>
>Gee then came out the knifes, nasty little people these Atari addicts...

Well, what are you and John even doing in here, if it's just to tell those
so called Atari addicts when they don't even share your opinion.

>
>
>Seems like that have to defend the Crappy Ataries and till they die...

Let them do it. If you can't stand it, perhaps you should find another
play ground, as it's you who is on the wrong side.

>If they don't like the PC they can go for the Amiga or the Acorn...

Well, Roger once again you manage to show all of us how stupid you are.

If you can't find anything serious to write then don't write anything.
I have tried those machines you just dream about, and still i prefere my
atari's. Why you may ask. Well, one of the reasons is persons like you.
I simply can't stand those stupid PC jerks who are continuing trying to
tell all others, that they're using the wrong/outdated/slow whatever
else lame excuse machine they might think of, and find themself raced
above anyone else. As a matter of facts, i feel proud telling i dare to
have an Atari. I just didn't give up when having a small problem, (like
many of those former atari now PC jerks who now are trying to laugh at the
Atari people, including yourself).

If you can't stand we're using another platform, then get the hell out of
here, as you do not belong here and are no longer welcome. I'm sure you
got better things to do, such as fooling around with some jumpers on one
of your cards, or perhaps trying to get the exact sound out of a cheap
sound card in your PC. Maybe even some new drivers, for god knows how
many times, on your Novell net, as it seems like thats what you live for!

Just leave us alone!

Kim

S > Yes its because I tell the truth, if they can't bit the bullet
S > and go and buy a Real PC..

what is the truth, Roger? Tell, me, what kind o' truth can I get here from a bitter, twisted, xenophobic, recently proven himself to be RACIST, paranoid, ignorant person such as yourself who has proven himself time and again to be wrong about many, many things - especially about the workings and uses of Atari computers, about its software, etc.?

S > Gee then came out the knifes, nasty little people these Atari
S > addicts... Seems like that have to defend the Crappy Ataries
S > and till they die...

Funny, I though all those people "flashing their knives" were people who were correcting your little disinformation campaign against a computer you obviously hate so much, as you have proven time and again.

Personally, I've had enough, folks. If anyone can send me netmail on how and where I can complain to the government of New Zealand to have Mr. Sheppard's net account on their system revoked for his harassment campaign against Atari users, espescially against Brian Brecroft, as well as his use of racist language, please do so.

And Roger - you don't intimidate me at all. But you seem to be intimidated by me, judging by the private netmail you sent me earlier this year in which you threatened to have MY netmail cut off if I didn't shut up in this conference. Seems you can't handle the real truth - and I bet you've done the same thing to a number of other people who have dared to correct you. However, I'm not a coward like you are - with me, everything is on the table.

S > If they don't like the PC they can go for the Amiga or the
S > Acorn...

The Acorn is not a viable alternative in North America - you can't get it ANYWHERE! At the moment, neither is the Amiga (though that is changing now). And in any case, why should I change? The Atari still does me well.

Fact is, I'm going to risk the wrath of Mr. Sheppard and point out that I'm currently looking at the possibility of buying a C-Lab Falcon Mk. I as my next computer for later this year. Why? Because after looking at all the alternatives (including Macs and PCs, nice systems all) I've come to the conclusion that this particular machine makes the most sense for me to upgrade to, as I won't have

to eat my software investment and go crazy trying to find new software that will match the power and results of what I already have, AND can use just about all of my hardware with it (including my external hard drive/CD-ROM combination). The fact that C-Lab seems to be committed to supporting and promoting the bird to the Atari market in general, rather than just musos, shows me that they're in it for the long haul - and that the albeit small market for Atari software is STILL plugging away with stuff for the Falcon even after Atari Corp. pulled the plug on it, shows me that there IS a future, despite what doomsayers like Roger Sheppard and Sinclap have been moaning about here for years.

It's not yet carved in stone, of course - first I have to see about a dealer (TOAD will be carrying it in North America, and I'm checking with Long and McQuades, the Canadian music store chain where I have a running account, to see if they can procure a 4-meg no hard drive model for me), then I have to talk to my bank manager (that shouldn't be a problem - after all, having just paid off my student loan, I should be in a good position to talk turkey). If not, my STe will still continue to work for me.

I trust that people here know me well enough to know that although not a genius, that I am at least NOT an idiot, and I do tend to think things out. And I think I've though things out as to my future plans well enough. Comment?

Out of the ether, the following was mentioned by Sander...:

>> GEM=D:\CLI\MINT\GEM.SYS
>> EXEC C:\AUTO\BLOWBOOT.PRX
SS> Now try the same with the GEM-line commented out. You'll see what
SS> I mean. I want to run MiNT without MultiTOS.
Hmmm, tricky as BLOWUP requires that GEM be initialised for it to install its screen routines. I don't see any way of using it without initialising GEM. You can initialise GEM without having to load either AES 4.0 or 4.1 by running GEM.PRG (I have it somewhere if needed). This definately came with earlier versions of Mint (the ones that Eric released 0.8x and 0.9x). This will, as stated above, initialise GEM without the multitasking AES, though it will not give you a purely text based large screen. It will be one way of getting BlowBoot to work within Mint.

Hey Roger,

You're giving all us pomms a bad name. If you feel so strongly about
the superiority of the PC compared to the Atari then why not move yourself
over to the PC news groups and leave us sad little nongs in peace.
Many of us using our humble little Atari's which are dead and no longer
supported, enjoy using them rather than spouting irrelevant nonsense about
architecturly deficient platforms!
I own a PC (486DX2@66Mhz), I own a Mac (Quadra 840av) and yet I still
use my extinct Falcon more than either of these two wonderful platforms!

The question you need to ask yourself Roger is, are you so insecure
in your choice of computing platform that you have a constant need to
reassure yourself by knocking other peoples choices in the areas which only
exist for those platforms discussion and not your platform of choice.
Take a moment for some introspective analysis and move on to an area
in which your views will be appreciated.

In a message Just Intonation Network wrote to All :
JIN> Does anyone still write new MIDI software for Atari ST?
JIN> I would like very much to get a sample editor that works
JIN> with my new Ensoniq ASR-10, but I very much fear that no
JIN> such thing exists. Any ideas?

If you want to edit samples you best choice is Zero-X which is a new program from sweden that will let you edit your samples and it can transfer the sound over SCSI or over MIDI. They have a special driver for the ASR-10 I think. It's a professional program and it have no equivalent on the PC or MAC in this price class. It have several nice functions not just sample editing and looping. A demo version is available on most BBS and FTP places.

You might want to get a falcon after trying this program as it's wonderful on this machine as it uses the falcon's DSP and audiosystem fully. :)

JIN> My 1040 STE has served me faithfully as a MIDI controller for
JIN> 7-8 years, and I have no desire to replace it with with a Mac
JIN> or PC, but new software development for this platform has
JIN> gotten mighty scarce.

And it will do several years to come.

Hi.

I'm trying to locate a guy who lives in New Zealand that offered to help me
set up NOS 0.42 a while ago so that I could use PPP.

I lost the address, but think it's something like:
john@southern.co.nz

If anyone knows this person - could you please let me have his address?
And ofcourse, if it's John reading this - please mail me...

Thanks,
Richard.

PS. Sorry to all of you that this e-mail doesn't apply to - I'm just trying
to understand the NOS thing.

From what I remember the 3270 is a Bysync machine, this would need clocks into the Atari, but Atari left that bit out, but the MC68901 can handle sync coms..

But don't think their is any software to support this...

>I hope that some of the ambitious and talented programmers out there who
>were talking of writing a graphical browser specifically for GEM/TOS will
>not give up just because Chimera is out there, relatively easy to install.

The talented programmers won't even attempt it and the ambitious ones will
give up when they realise it can't be done. For a graphical web browser
(and all the underlying SLIP malarkey) you require multi-tasking and
networking functions. Standard GEM supports/allows neither of these.

Of the two SLIP solutions which exist for the ST, the KA9Q variants bypass
GEM (so they can have full control of the machine) and run under TOS with
their own sockets and multi-tasking kernels, and MiNT/MiNTnet replaces
GEMDOS completely so a new GUI is required (e.g. X Windows).

(I must admit that I'm no expert in these matters, so if anybody knows
better, feel free to prove me wrong.)

1185. Memory-Mapped I/O hack

Newsgroup: comp.sys.atari.st
Date: 1995-07-24 00:00:00 UTC
From: jwasinge@slate.Mines.Colorado.EDU
Message-ID: <3v0irs$ff4@slate.Mines.Colorado.EDU>
Source record: 161752

I would like to add extra memory-mapped IO chips to my ST. My goal is to add an extra MFP 68901 or Yamaha sound chip (for some digital I/O lines) and a A/D converter(w/ analog multiplexer) chip. I hope to be able to control several motors and read several real-world sensors with this project.

I can obtain most of the Address/Data and some of the control lines I need from the ROM cart. port. The rest of the lines I can extend from the CPU itself or from other points on the mother board.

I have a question though about the ST's "MMU" and Glue chips. I know that the Glue chip decodes the 68k address bus and generates appropriate chip select signals. I can add logic on my project board to decode a presently unused section of the memory map and generate my own chip select signals. So, my first question is: What are safe regions of the memory map to use for this???

My other main question is about the Bus or Address Errors that the MMU chip (I think that this is correct) generates if it sees an illegal memory operation. Is the MMU hardwired to reject any memory I/O to addresses which were not part of the original Atari design ??? Or does it just signal errors for I/O outside of the 4M limit or word/long I/O to odd addresses? If I build decode logic that selects a perip. chip's register in an unused portion of the ST memory map will the MMU (or Glue) generate a Bus or Address Error? If so, does anyone know of another way to add extra memory-mapped I/O chips to the ST h/w?

BTW, if anyone has done something like this I would be very interested in hearing about your modification.

Thanks!
John Wasinger

Hey Mickey,

You said some Macs have a video problem? Can you define some Macs? My 630 is
fine whats wrong with yours? My wimpy 630 can drive a 17' without any mods..
Why would I need to use an IDEK one when I have more choices? Even if I needed

a video card, the card plus the 630 would still cost less than the under powered and over priced Falcon!

Hi All,

I know this Chimera thread has been going on for a bit but what I want to know is....

1) What,exactly,is included on the installation disks?
2) What else do I need apart from an Atari computer and the disks do I need?
3) Can Chimera be used with a Compuserve connection?
4) What Falcon resolution does it work in?
5) Is it really a hassle to set up?

And finally...

6) Is it any good?

Thanks for any responses in advance. :)

I have not used my 1040 st since the internal drive broke and noone would sell me any parts to fix it. They would only offer me a new drive for $150. My Atari explorer magazine stopped coming, other atari magazines went out of business, computer shopper stopped their section on Atari, and I never heard anything about Atari again, except in the form of video games.

And now I stumbled on to this group. So, my question is, does Atari still make computers, and if so is the software and hardware support still very poor? Now don't get me wrong, I have always thought Atari made good computers. I've had Atari since the first introduction of the Atari 800. I thought is was a better computer than the early IBM PC, but you could not expand it and it did not get support from many 3rd party companies. This is mainly due to poor business sense on the part of Atari's management.

I had to switch to IBM to get any real productivity done for business purposes, but I still like my old Atari and I would not mind using it for non busines purposes. So if Atari is still making computers or if there is anyone still supplying Atari hardware and/or software, please tell me how I can get in touch with them. I would like to get a new drive and a hard drive to get may 1040 working again. I would also like to get something to emulate my Atari 800xl or get it fixed. I have tons of software for it, but I can not get it to recoginize any external device (like my disk drive, modem, or printer).

Please email any responses to:

mkirgan@whale.st.usm.edu

1200. Re: Where can I get a PD C compiler/interpreter?

Gareth Davies (932907da@udcf.gla.ac.uk) wrote:
: Can anyone help: do you know where I can get a PD/Shareware/Freeware C compil

Get the GNU C++ package. Hardware requirements are 4Mb ram and a hard disk.
The gcc compiler handles most C/C++ sources. I am using a rather old version
(2.31) without C++ option. I run the compiler from a command line shell
(Mupfel, taken from the Gemini package). I also need the shell for setting
the environment variables for gcc.

You need the following archives for gcc:

gcc258b.zoo (the actual compiler)
gpincl20.zoo (C++ include files)
gplibo20.zoo (C++ libs)
incl94.zoo (C include files)
libolb94.zoo (C libs)
pmlolb21.zoo (math lib)
util37b.zoo (linker, ar, etc)
[optional mint support]
mntinc46.tgz (include files for mintlibs)
mntlib46.tgz (mint libs)

Environment vars to be set (as I remember) GCCBIN, GCCINC, GCCLIB.

The archives should be at atari.archive.umich.edu.

hope this helps,
Chris

It's not a video card, Hutch. It's a monitor made by Idek (now IIYAMA).

17" FST, 0.26 dot pitch.
Sync: Horizontal 23.5-86kHz, Vertical 50-120Hz
135MHz bandwidth

I'm using the lower spec 15" version, myself.

^^^^^^

That's all I can stand 'cause I can't stand no more!

Once and for all, Roger, the word rubbish (trash, garbage, etc) has two, count 'em, TWO, letter b's in it. There is no such word as "Rubish" although it brings to mind the endless spoutings of drivel from someone who is a self-made "rube," defined by my Websters as "an awkward, unsophisticated person." I'm sure your Macquarie's (did I spell _that_ right?) dictionary has a similar definition.

We can forgive your other misspellings, but please correct this one since you seem to be so very fond of using it in every post.

1203. help: no cursor under MiNT

Newsgroup: comp.sys.atari.st
Date: 1995-07-24 00:00:00 UTC
From: lmuniz@vub.ac.be
Message-ID: <3v15hk$8r5@rc1.vub.ac.be>
Source record: 161770

I have recently installed the unix kit from ftp.cnam.fr, and everything works fine, but there is one little problem: there is no cursor in the command line.
When in the shell, this is not really a problem, but with an editor like vi, elvis, or emacs, it becomes a pain in the ass, because you never know where you are.
Does anyone know a remedy?
(besides, i HAVE to use MiNT and not MULTITOS, because in need much memory)

Thanks anyway, for any hints.

Luis

Spotted in WHSmith in Brighton - a new Atari mag that wasn't Atari World. I forget the actual name of it, but it's a games mag for Sega and other consoles, including Atari Jaguar. Saying this, there didn't seem to be that much about the Jag in it!

Still, doesn't help ST/Falcon/TT owners.

1205. Re: Gemulator 4.0

Newsgroup: comp.sys.atari.st
Date: 1995-07-24 00:00:00 UTC
From: st39@bton.ac.uk
Message-ID: <DC8DAx.J6y@bton.ac.uk>
Source record: 161772

It seems that Gemulator4 is optimized for Win95 and so running it on anything else (Win3.x) would not give such good performance (16bit code instead of 32bits and all that).

However, OS/2 is (and always has been) 32bit, but I beleive that there is no OS/2 native version of Gemulator4 - with this in mind then OS/2 would have to run Gemulator4 under Win16 code (and so 16bit).

Hmmm, I think that makes sense :) Anyway, anyone got any experience of running this under OS/2?

On 21 Jul 95, Roger Sheppard.. shot this through the ether to All ...

RS> Seems like that have to defend the Crappy Ataries and till they die...

Not really so, Mr.Sheppard. We're merely defending OUR right to exercise OUR personal preference. I have yet to see Atarians flock to PC and Mac areas in order to tell the people there that their machines are crap, whereas you, who apparently don't use Atari machines, allow yourself the self indulgent luxury of joining an Atari group with the purpose of telling us what naive, deluded nerds we all are. We're simply not interested in listening to the ravings of someone whose intentions are so obviously malicious.

RS> If they don't like the PC they can go for the Amiga or the Acorn...

We don't have Atari machines because we HAVE to have them but, rather, because we happen to like them and they suit our individual purposes very well, thank you! I use my Falcon professionally every day and have no desire to switch to a PC. This is not the same thing as saying that PC's are crap, because, despite their various failings, they are not. I just don't happen to like the system, that's all. If you're so in love with your PC, more power to you. But please stop trying to force your bad vibes on the rest of us. If you feel a need to rant and rave for the PC against the Atari, there is a specific "Advocacy" area designed to allow you to do just that. This is not the proper place for your comments.

ATW,
Tom

It was none other than Steve Wells who did write on 23 Jul 95 that ....
SW> A friend opened up his 4meg Falcon, and took out a board, which
SW> he discovered had a 72-pin SIMM in it. This is a new Falcon with
SW> no mod's done, so, can he just stick a 16-meg 72-pin SIMM into it
SW> and get the 14meg? Or is this some sort of abnormal Atari
SW> design?

Well I got a Falcon with a 16meg SIMM in it ..but I had to take out the old Atari proprietaty board and put the latest simm board in so maybe you are lucky and have it already in place ready. Where did he get the Falcon and what memory config did it state on the box ? A lot of 4 meg Falcons were upgraded 1 meg ones which were not in much demand hence were upgraded by retailers.
Answer : I'd say yes out with the 4meg SIMM in with the new 16 meg SIMM, lurvely :-)

1221. HELP: PPP Setup Mint <-> Cisco Term. Server.

Newsgroup: comp.sys.atari.st
Date: 1995-07-24 00:00:00 UTC
From: von@PROBLEM_WITH_INEWS_DOMAIN_FILE
Message-ID: <3uup38$cb@idefix.eunet.fi>
Source record: 161836

Hi All.
First off thanx once again all for your help upon my NvRam problem.

But Now the problems came back with a vengence,
After Finally getting the TAF package running I started
trying to set up the PPP connection, my Service runs via
a Cisco Terminal Server which has built-in PPP and SLIP
so I don't need to connect all the way to the acctual
Main Server. However, after a long bout of reading documents
and Online helps on the Cisco I thought I had everything
Setup correctly, but no... My chatfile in Mint should be
allright, but it's the setup on the Cisco that I'm not too
sure of, For one, the Cisco has an two PPP options that
I don't understand at all, one is "Dynamic Routing" and the
other is "Header Compression" , I've tried to enable
the Routing bit but still the PPP connection is screwed,
to describe the problem:
After the PPP connection has built up from Mint ,
which seems to go Ok, as there are no error messages,
I try to do something ie. Ping an address or something
the systems start just to never stop, nothing happens,
no echoes, it just starts working untill I open
another shell process and Kill the first one, I've
let it run for 10 Mins without any respons, I'm out of ideas.

Help please,
-Peter.

Ps. I will try to change to another Nameserver today as
a last resource as It may be that our central
Nameserver is screwed, but I doubt it will change
anything 'cuz Pinging a direct IP address doesn't
work either.

On my 486DX33 -- GEM dialog redraws is only 60% (QuickIndex) and that's with
NVDI. Looks like it's like any other 32bit Wintel applications, needs at least
a 90Mhz Pentium :-(

It is down to the way NVDI implements HiColour and TrueColour, which is slightly different to the way Atari did it with the Falcon. I can't remember the exact details, something to do with the number of colours and planes reported by v_opnvwk/vq_extnd.

I've had reason to take two stock 4MB Falcon030's apart. One had the
Atari 4MB board, one had a 3rd party adaptor to take 72pin SIMMs, like
you describe. I never had a 72pin 16MB SIMM to try at the time, but
it certainly should work (unless the board designer was particularly stupid).

Roger Sheppard wrote in improper English:
> Yes its because I tell the truth, if they can't bit the bullet
> and go and buy a Real PC..

Error 1) "its" : missing apostrophe
Error 2) "bit" : past tense used instead of present
Error 3) "Real" : inappropriate capitalisation in the middle of a sentence
Error 4) ".." : an ellipsis has three dots, not two

> John Townsend came on here and told them to stop wasting time on the craped
> out Atari and the out of date OS...

Error 5) "craped" : spelling error

> Gee then came out the knifes, nasty little people these Atari addicts...

Error 6) "knifes" : the plural of "knife" is "knives"

> Seems like that have to defend the Crappy Ataries and till they die...

Error 7) "Crappy" : inappropriate capitalisation in the middle of a sentence
Error 8) "Ataries and till" : Ataries (sic) and what?
Error 9) "Ataries" : spelling error

> If they don't like the PC they can go for the Amiga or the Acorn...

I counted at least nine errors of grammar and spelling in this posting.

Hummm. It appears our favourite Southern-Hemisphere Curmudgeon still hasn't learned the rules of written English, which, for what I am led to believe is a native Englishman, is especially unusual. Aren't the English supposed to be taught the "Queens English"?

Unlike some posters to this forum, for whom English is not their native tongue, they at least write grammatically more correct English than our friend does here.

Hi,

there are two Atari magazines: "Atari inside", published by Falke Computer
in Heikendorf, and "ST Computer" by Heim Verlag in Darmstadt. ST Computer
turns more and more to a Mac-magazine due to MagicMac, but both magazines
contain addresses of Atari-Shops in Germany and advertising of software
distributors and developpers.

> [...]
> (rest of post snipped)

The 50% sppedup was observed using some simple "do-nothing, very
intensively" benchmarks that I had written using Devpac 3.1.

To verify that this was not simply just a combination of "my setup is
better than yours", I took mine across town to see a friend who has a TT.

My machine has TOS 3.05, theirs 3.06. I was unaware of anyone else with a
3.05 TT.

Both ran the benchmark program in ST High rez, with no other software
co-resident. (In essence, we wanted to make an "apples to apples"
comparison).

We tried the same tests in TT medium, and whilst the processing time was
longer (slightly), the ratios were very similar.

Firstly, we unplugged the TT RAM boards, and ran the tests wholly from ST RAM. Both machines turned in identical times.

Using my TT RAM board in my TT, the tasks completed in two-thirds the time, therefore they were about 50% faster than ST RAM.

Using their TT RAM board (an Atari original), in my TT, completed the task in three-quarters the time, therefore that was about one-third faster than ST RAM.

Plugging my board into their TT repeated the same results - 50% faster.

Their board in their machine was 34% faster. Almost identical.

All tests exercised RAM access, with the CPU cache off, burst mode inactive, and, in general, all "go-fast" features of the TT design were negated. As far as I can tell, everything was purely RAM based. (Unfortunately, I no longer have the source to this benchmark program)

My board was the RamTT from System Solutions. Unfortunately, it needs to be waitstated in my machine, because using the 80ns SIMMs that System Solutions provided when I bought the board from them, and running with wait states off for more than 10-15 minutes will cause data to be mangled - a random bit within randomly spaced bytes will be switched "on" irrespective of whether it should be or not. (The benchmarks said that "no wait states" was 2.25 times faster than ST RAM - a 125% speedup).

As usual :-(

But there is a new magazine coming out soon in USA (if it has'nt already) by the name of "The Jaguar's Edge" that is Jaguar only!!! There is going to be 6 numbers/year. One of the people that is starting up this mag is Travis Guy, the publisher of Atari Explorer Online.

Grtz from Sweden:

Magnavox Professional RGB Monitor 80 For Sale!

Model Number: 8CM515

Works With: Atari, Commodore 64, TI, and Apple II Computers

TV! Can be used as TV Monitor if hooked up to a VCR (excellent picture!)

Manual and all cables included

Price: Best Offer

SPECS:

Screen: 13 inches

Deflection Angle: 90 degrees

Video Input Signal
* Composite Video, 1Vp-p, negative sync, phono connection type
* TTL level digital video, separate horizontal & vertical syncs
* Analog video 0.7Vp-p

Horizontal Resolution: 640 dots (RGB)

Character Field: 25 lines of 80 characters (2000 total)

Audio Input Level: Up to 150 mV, phono connector type

Audio Output Level: Up to 1W @ 5% distortion

Power Supply: 120Vac +/- 10%, 50-60Hz

Power Consumption: 75 watts maximum

Dimensions (H x W x D): 320 x 350 x 387mm

Please contact me at the email address below...

Stephen K Mulrine (robotron@moroder.demon.co.uk) wrote:

: The talented programmers won't even attempt it and the ambitious ones will
: give up when they realise it can't be done. For a graphical web browser
: (and all the underlying SLIP malarkey) you require multi-tasking and
: networking functions. Standard GEM supports/allows neither of these.

: Of the two SLIP solutions which exist for the ST, the KA9Q variants bypass
: GEM (so they can have full control of the machine) and run under TOS with
: their own sockets and multi-tasking kernels, and MiNT/MiNTnet replaces
: GEMDOS completely so a new GUI is required (e.g. X Windows).

So you've never heard of MultiTOS, that allows you to multitask GEM
programs? I can run multible telnet and lynx programs in TOSWIN
windows, and a GEM-specific application named DUfp in a GEM
window...

There is no excuse "that it can't be done". DUftp shows that you can
write MiNTnet *GEM* applications. If I were a programmer, I would
attempt writing something, but I wouldn't even know where to begin
learning to write code...

(rest of his usual crap cut)

I am talking about a Quadra 630, the one I use at work. If you ever can afford a high-res 24 bit card for your Quadra and have reason to place a 32meg simm in the Quadra's single slot, you will find that the card will not clear the simm without modification. I know it's not much, but it's kinda like hammering on a Corvette, if you get my drift. I never said the Falcon was a better machine than the Quadra, but it's better for me. I could afford a Quadra, but why? The first "professional" software package I would have to purchase for the Mac would easily offset the "over" priced Falcon cost. I'm just sick and tired of your presence in this news group and wish you would %#$*-off and die.

Mike:)

Don't dare plug in that PSU!!! The Sportster requires a 9V _AC_ power supply
rated at 500mA!!!!

It's a color monitor. A 17" that scans from around 15.5-31.5Khz.
They are now discontinued (don't say it SinPlop) but some Amiga dealers
have them in stock. The only problem I have with it is when my kid
hooks his Jag to it, it's usually gone for the night. :) Works nice
on the Falcon, STF, STE. However, they cost at LEAST as much as a Mac
monitor of that same size (a good one!).

Mike :)

1256. Pagestream 2 Drivers

Newsgroup: comp.sys.atari.st
Date: 1995-07-25 00:00:00 UTC
From: Dave Brook <Dave@mbha.demon.co.uk>
Message-ID: <806667370snz@mbha.demon.co.uk>
Source record: 161721

Has anyone written any printer or import/export drivers for Pagestream?

I am particularly interested in any updated drivers for GEM file (in colour)
and colour inkjet or colour postscript drivers (QMS etc.).

Being a bit of a duffer in this area, I do not have the programming to write
new ones (the originals are in assembler I think), but the original sources
are available for someone brighter than me :-(

I am so desperate I am prepared to pay (if that is not an insult).

>engineer's long night of drinking. :)

correct would be:

w106
w101 w102 w103 w104 w105

w101 w102 w106
1MEGx8 2-3 2-3 2-3
4MEGx8 1-2 1-2 1-2

starting RAM adress w103 w104
$0100 0000 2-3 2-3

Adress mode w105
non-burst 1-2
bust 2-3 (default)

hope, it helps

Well, I've tracked down my problem to XYZ.TTP. Back before I had a hard drive, XYZ worked fine, but when I hooked one up, suddenly whatever I downloaded from Flightline BBS onto a hard drive always ended up corrupted, no matter what protocol I used. If I downloaded onto a floppy, it worked. If I used some other program, it worked. I never had this problem with any other board. Until now: I downloaded all kinds of stuff from my FTP provider onto my hard drive just fine before, but suddenly any files larger than about 70k get corrupted. I downloaded
Kivi using the GEMRZ program that came with StarCall and it worked!

Anyone else have a similar problem with XYZ ver 2.01? (I'm using ICD drivers ver
6.0.7)

As I understand it, MutliTOS was disk-based and came with its own hacked
version of GEM (which therefore replaced the ROM-based version). I don't
have it, though.

Yup :-))

>A friend has an ST, I have a PC (IBM compatable jobbie). What is the
>easiest (and cheapest, this is only an experiment) way of transfering
>files from the PC to the ST?

Format a 720k diskette in the PC and copy the files to it. Or use a
program like DCFORMAT on the Atari to format disks PCs can cope with.
Later STs will format DOS compatible floppies from the desktop, but
formatting on the PC is the best bet if you're unsure.

WRT file formats, you need to check out the software at either end and
find a common format for the two pieces of software. If all else fails
use ASCII for text, and there are a zillion converters for picture
files. Gemview is one of the most useful.

>Thanks, in advance, for any help given,
You're welcome!

: gotten mighty scarce.

: ===
: David B. Doty Just Intonation Network
: jinetwk@dnai.com http://www.dnai.com/~jinetwk

Yes...there are at least two top notch developers still writing midi software for the Atari platform. Stienburg and C-Labs (in no particular order) are both going strong and still strongly support Atari systems.

Also...in terms of a librarian for your Ensoniq...you shouldn't have to awful many problems getting something that will drive it from the ST.

C-labs makes something called soundsurfer that is supposed to be the cat's meow. I think Stienburg has one as well. As for finding out if Surfer will run your keyboard...I seem to recall a web page out there that lists all current modules. I can't remember exactly which web page it was...but doing a search on atari should narrow it where you could find it in a matter of a few minutes.

I'm not sure how the keyboard you have keeps up with it's data...be it sysex...or it's own special scsi language...perhaps a bit of both. As far as the sysex part...Mark Of the Unicorn still sells X-Or for the Atari. So that's another option. MOTU doesn't "support" the atari version anymore from what I understand...but...the newest and still yet to be written Modules for specific midi devices are supposedly cross platform...meaning you can get a PC or Mac (which is still highly supported by MOTU) X-Or module and it will work on the Atari. I've heard you might have to strip the file's header or something minor like that...but the meat is all the same. In essence...I'm positive that if you had a registered copy...MOTU would bend over backwards to get you the module you need...provided the keyboard you want to control with it isn't way beyond the atari version's capability. If it's just sysex you want...it should handel it with no probs...if you want control of samples and such...it might not be up to par.

As far as I know...there are no SCSI talking ed/libraian programs for the ST. Just sysex...but I could easily be wrong. If you need scsi...it might

be time to trade the Atari in...but I haven't looked for such an animal so ask around some more before you give up (if you even need this).

If you can't get to the web pages...and no one around here has a list of Ed/Lib prgrams and the keys they support.....give toad a try. Actually, you might give them a call even if you do find more info here. They carry just about everything still being made for the atari...and can get most of what they don't stock. They'll fix you up if it's at all possible. I've had good luck so far :)

Toad's email is toad@charm.net
You can get catalogues and phone numbers from there.
They also have fax services if you need info really quick.

Good luck...I think you'll find what you need.

Brian

1286. DUFTP

Newsgroup: comp.sys.atari.st
Date: 1995-07-25 00:00:00 UTC
From: smoore@chowgar.demon.co.uk
Message-ID: <806684804_OASIS_@chowgar.demon.co.uk>
Source record: 161789

Hello there

Is anybody here using DUFTP? It looks like a hell of a nice program but I'm having trouble setting it up. I'm running MiNT and MiNTnet from the TAF disks and disabled X-Windows by commenting out parts of the mint.cnf file but I can't get the dial script set up right. If anybody could help me out, prefereably somebody who has this working okay and is using Demon as their service provider, I would be very grateful.

I know the author is around somewhere but I don't want to bother him as he's working on something that I don't want to interupt him in the middle of.

Cheers.

I want to retain the ability to view old Neochrome files, and to keep other docs created on an MEGA ST. Is Gemulator what its name implies, sofware that runs under Windows that emulates GEM? Does it allow one to read and run GEM software? Can anyone tell me where I can get it? I have been out of the Atari comp game for about 3 years now, and am hopelessly out of date.

>off in their prime. <sigh>. <SIGH>. Ain't life a bitch?
PageStream would have failed on the Atari anyway; it's only real saving grace is PostScript support. It's slow and buggy. It has to hold everything in memory at once. It's screen display of colour documents and bitmaps is shite.

I still use it purely because it has colour PostScript output.

SoftLogik developed the Amiga version much further, as Amiga sales were much higher. But there were no Calamus SL or DA's Layout to compete on that platform.

Don't Soft-Logik still have a UK office? I've always found them helpful.

From: gio@wcl-rs.bham.ac.uk
Message-ID: <3v5hdj$f2a@sun4.bham.ac.uk>
Source record: 161653

Subject says it all really... has anyone got a working internal 720k floppy drive for an ST that they don't mind ripping out to sell me? I'm having all sorts of trouble with mine, but I'd rather not send the ST away to be checked out unless I really have to (finances are a bit tight), so I'll try replacing the drive first, and if that doesn't work... we'll have to see.

Am willing to pay reasonable prices plus postage, or will collect if it's not too far from Birmingham.

Thanks in advance...

Be seeing you...

>I have recently installed the unix kit from ftp.cnam.fr, and everything
>works fine, but there is one little problem: there is no cursor in the
>command line.
> [...]
>Does anyone know a remedy?
> [...]

I have not actually tried the unix-kit from ftp.cnam.fr, but
if you are using tcsh, and have a properly configured TERMCAP
file, you should be able to say

% echotc ve

to enable the cursor; complementary

% echotc vi

to turn the cursor off. Put this in an init-file, or something...
If the TERMCAP solution does not work, you could try
to dig up the actual escape-sequence to enable a cursor on a VT52
(which I assume you are using), and then write a script which
'echo'es this to the terminal. I may be able to find this, but
I do not remember it at the moment.

Personally, I am using MiNTOS, which sends my terminal an init-string
with each login, from TERMCAP, so I always get the cursor...

Hope this helps at least part of the way.

Hi,

I recently bought a second hand ST Replay cartridge for my STE and it worked fine... until I trashed the disk which had the software on it.

As the ST Replay software is unusable without the cartridge, and since the editor has gone under (AFAIK), I was wondering if anyone could mail me the UUencoded software?

If not are there any newer programs on the net that can be used with the ST Replay cartridge (STE enhanced would be great)? I have found a few, but they only play samples and can't record.

Thanks a lot,

Nick

1306. Re: Converting NEOCHROME files?

Newsgroup: comp.sys.atari.st
Date: 1995-07-26 00:00:00 UTC
From: Ari Feldman <ari2550@delphi.com>
Message-ID: <ZRKhBWy.ari2550@delphi.com>
Source record: 161659

Hi.

Unfortunately, as far as I know you're out of luck! Viewing Atari pics on the PC is difficult at best simply because A) no one wants to take the time to write a viewer and B) the screen memory and binary format is different so it would take more effort.

There's a program that lets one view DEGAS .PI1 (uncompressed) Atari pics available as freeware on the internet for the PC but that's it.

Perhaps you can convert your NEO files to .PI1 images (not difficult to do at all on the Atari side)? Or, you can try converting your pics as .IFF files (rename them to .LBM) and many PC programs can read them.

Or, how about porting them to .GIF or .PCX using GEMview?

If you want to maintain compatibility with your Atari, try the .PI1 solution.

Hope this helps.

Ari

1307. FS: Expanded 1040STf System

Newsgroup: comp.sys.atari.st
Date: 1995-07-26 00:00:00 UTC
From: snoret@egon.unx.sas.com
Message-ID: <DCC7xF.8KF@unx.sas.com>
Source record: 161660

I'm moving, and just don't have the room for
my system anymore. I'm going to be relegated to
using an old 'luggable' for the time being.

For Sale:

Expanded Atari 1040STf - $300 (obo)

Enhancements: ICD AdSpeed 16MHz accelerator
4MB Ram (Marpet Xtra-Ram Deluxe SIMM Board)
(Original Documentation and Software for both of
these upgrades is included)
TOS 1.4

Included in above price:

External Atari DS/DD Floppy Drive
SC1224 Color Monitor
SM124 Monochrome Monitor
Monitor Master switchbox
Spectre 128 cartridge w/128K Macintosh ROMs
(with original documentation)
All cables, power supplies, etc.

(I really only want to sell the above items together as a system)

Also Available:

SCSI Hard Drive Subsystem - $300

Includes:

Quantum 420MB Hard Drive

ICD AdSCSI+ Host Adapter: DMA in/out, Real-Time Clock with Battery Backup
(includes original documentation and software), DMA cable

Toad Computers "Shoebox" Enclosure:
power supply, external SCSI ID switches, front-mounted power switch,
room for an additional drive (cd-rom, syquest, etc.)

(I'll throw in my old 20MB Miniscribe SCSI Hard Disk with this, too).

NEC Single-Speed External CD-ROM drive - $45

I will include ExtendDOS CD-ROM driver software, and the Atari GEMini
CD-ROM disk. This CD-ROM drive is all I ever needed. It's a great way
to get into CD-ROM without a lot of money, considering the relative

drought of ATARI-specific CDs out there. This unit is less than
a year old.

All items will be shipped UPS COD.

: : networking functions. Standard GEM supports/allows neither of these.

: : Of the two SLIP solutions which exist for the ST, the KA9Q variants bypass
: : GEM (so they can have full control of the machine) and run under TOS with
: : their own sockets and multi-tasking kernels, and MiNT/MiNTnet replaces
: : GEMDOS completely so a new GUI is required (e.g. X Windows).

This is odd...I reacall being able to run several different programs at once
way back in 1987 or so...with TOS 1.00. It was kind of a pain that I had
to boot them as desktop Accs...but they worked...fully multitasking.
I know it was really multitasking to some degree because I was able to
download a file using a background y modem transfer, and play a midi sequence
at the same time....and you'd think that would be very hard for and ancient
ST since both of the ports (midi and rs232) might need alot of the same
hardware seeing as they are both serial ports that are pretty much cross
compatible in terms of protocols they can use.

Why couldn't the thing be set up to run as a combination of Accs and Prgs?

1314. Mega STe / ICD drivers problem

Newsgroup: comp.sys.atari.st
Date: 1995-07-26 00:00:00 UTC
From: mcnaugra@vax.sbu.ac.uk
Message-ID: <1995Jul26.111629.1@vax.sbu.ac.uk>
Source record: 161667

I've just added an external SCSI drive to my Mega STe, using the Link II and ICD driver software. I'm still booting from the internal drive, and since I started using the ICD drivers, I'm getting a lot more crashes during boot-up (I always did get some, but now it's around 50% of the time). I have error reporting turned on in the ICD driver, and I've only once had an error reported during use; all the others are during boot-up.

The new hardware isn't causing the problem, with the new drive disconnected the errors are still present. I've narrowed it down to:

1) One of my auto-folder programs conflicting with the ICD drivers (I think this is the least likely, but at least I can test it)

2) An incompatibility between the drive and the driver software.

3) A fault in the internal drive interface. This seems most likely. I re-partitioned the internal drive when I got the external, and no bad sectors were reported, so it's not that.

Anyone had similar symptoms?

Odd you should say that... I have recently started getting a lot of corrupt
LZH and ZIP files from around the place. Typically LZH decompression fails
with 'bad table or encrypted file', neither should happen. It seems to
coincide with increasing the buffer size with CoNnect, and using the internal
Z-modem. I have just installed GSZRZ, hopefully thast will resolve the problem.

ps I wonder if the HDDriver/Tcache combination might have a problem?

>Atari himself and uses it!!!

Yes I own 3 Ataries and I started from way back in 1986...

But what realy gets me is all the rubish and lies about how good the Atari is,
may be it is for people that know very litlle about computers or first time
users, but it no longer has any REAL support...

No ! Usenet only support a few users, I think I could count the number here
(NZ) on one hand...

But as of to-day Yes I have moved up to a PC clone, so does any one wan't
my crappy old Ataries...???

They can't even be given away here....

>> sure about the "retentive" part, as he seems to rejoice in spreading
>> lavish amounts of feces around the Net, but "anal" sure seems to fit the
>> bill!
s>
s> Eh?

AAMOF, the latter comments weren't directed at you but were simply a comment on a letter which (despite the subject line) sirsmedley wrote about Roger Sheppard. The psychological term "anal retentive" is commonly used to denote people who exhibit excessively compulsive behaviour. As to your "Eh?", you must be the only one who didn't recognise a back-handed way of saying that the above named individual acts, IMHO, like an anus. If that term is unfamiliar to you, perhaps the more common "asshole" rings a bell.

While we're on the subject, however, I might add that you also display this tendency. It amazes me without end that people who are obviously not (or, at least, no longer) Atari users are willing to waste masses of their own time in order to harass and heap abuse on those that DO!. I've kept quiet about this for several months as I've watched both of you (Sheppard and yourself) put down Atari computers in message after message. To your credit, I've not seen you threaten anyone and you are a good bit less impolite than Mr. Sheppard, but this doesn't alter the situation.

I'm not empowered to speak for everyone in this area (no more than is Mr. Becroft) but, I would think that the volume of mail on this subject which has appeared here over the last couple of weeks would make it painfully obvious that a great number of us object to your comments! Note that I, unlike Mr. Becroft, am not saying that your very presence is undesirable, only that your attitudes and comments are! I'm sure that none of us would object to your presence here if your attitudes and comments were of a _constructive_ nature or if you would keep your mouth shut. If you can do neither of the above, I seem to remember advising you to go out into the middle of the Iowa corn fields, pick an ear (the larger the better) and contemplating over a convenient place to stick it!!

ATW,
Tom

Unfortunately, MagiCMac reads only the 720 KB formatted disks, not the single sided ones. With the 720 KB disks, you can easily copy the files from with MagiCMac from drive A: to drive C: and open them on the Mac's Finder from the folder named MAGIC_C.

On the Macintosh, I have no idea which other tools could read single sided Atari disks. Sorry.

Source record: 161682

In a previous article, libaubt1@nic.cerf.net wrote:

> ...I don't know for sure, but I get the feeling Dave Munsie writes in
>GFA.

Of course, he does. Dave is one of the true GFA-guru's out there and
while he can program in other languages, he generally prefers GFA for
many of the same reasons I and many other programmers do... ease of use,
speed of development, and overall performance. It ain't ATARI BASIC. :)

>I have to wonder about the speed increase, though. C is much more
>flexable, and it could very well be that it some instances, a speed
>increase could be found.

It all depends on what you are trying to do. I generally found most
versions of C (I used to use Laser C quite a bit) could give me a
somewhat faster executable (especially with floating point math) and
almost always a _smaller_ executable than my best efforts with GFA.
But those relatively small gains came with a penalty in development
and debugging time. A 'real' C-guru would be more efficient, of course.
Make no doubt about it, C _is_ more flexible but it ain't a Godsend
for every programming chore. The skills of the programmer are MUCH
more important than the language specs.

Yep, sure has!

> A friend has an ST, I have a PC (IBM compatable jobbie). What is the
> easiest (and cheapest, this is only an experiment) way of transfering
> files from the PC to the ST?

1) Format a disk on the PC using a 720k (not 1.44mb!) format.
2) Write whatever files you want to transfer onto the disk.
3) Stick the disk in the ST, it will happily read it like any other disk.

You can also take files from the ST to the PC using the same disk.

Pretty much all hard drives have been auto-parking for quite a while. You won't
need a program, the hard drive parks itself when the power is cut.

Well, I think most of these German programs are available in English.
For example COMA is very good and includes an answering machine. It's
available in English.

Format a floppy to 720k on the PC and use that!

If you want to do more get GHOSTLINK (PD) and a null modem cable which
allows you to handle your PC filestore on the ST as if it were just another
GEM partition.

1342. [Q] Reading ST disks on a Mac

Newsgroup: comp.sys.atari.st
Date: 1995-07-26 00:00:00 UTC
From: kmack@panix.com
Message-ID: <kmack-260795000830@kmack.dialup.access.net>
Source record: 161748

I apologize if this is a FAQ, which I'm certain it is, but I did everything I could to figure it out on my own without any success.

Here's the deal: I used a 520ST for a number of years, running ST Wordwriter, and now the ROM on the ST has burned up, but I need to rescue a few documents from the disks. All I need is a utility that will allow a Mac or a PC to transfer files from a GEM formatted floppy so I can convert them to MSWord format.

I've tried one PC utility: ST2DOS, which doesn't really do what I need - I don't want the boot sectors on the floppies altered. I've tried the MagicMac demo (German edition), but it doesn't seem to read the old low-density floppies, and I don't know whether it can save outside of its shell in a Mac-readable format. I've heard something about Gemulator for the PC, but I don't know any ftp site addresses that carry it, or whether it's capable of translation. If anybody else has solved this problem, please let me know.

Thanks for your help.

Kevin Mack

GemView will convert many formats, however I haven't used it in a
long while. It is a shareware program that you could ftp from most
any Atari supported site. (If you purchased Gemulator you could still
use most of your ST software on the PC, by the way). If you don't mind
spinding a few bucks, pick up ImageCopy from an Atari dealer and you
can convert Neo's to most any format you wish (about 40.00).

So Long

Mike :)

Hello again (didn't read far enough the first time)

Gemulator does run Gem programs on a PC. Best to use a 486/XX
or better. It is fairly compatible. The latest version is said to
have many improvements over previous versions.

Well, if the Mac in question has a 1.4Mb floppy drive (which all Macs have had since the old SE), you can easily read Atari and PC formatted DSDD/DSHD disks with Apple File Exchange, Access PC, or other utilities. This capability is built-in to all the newer Macs, AFAIK. I don't know how to get the Mac to read a 360K SSDD Atari disk, however, unless it is the 'Red Format' utility John speaks of.

M > (like my disk drive, modem, or printer).

The best way to find out just what's available for your Atari ST
and 8-bit in the US (including parts, software, and advice) is Toad
Computers in Maryland - they've got lots of stuff, and are VERY
enthusiastic about the platform. Phone them at 1-410-544-6943 or fax
them at 1-410-544-1329 and ask for their current catalogue.

Unfortunately, Atari finally announced this year that they have
dropped the computer line in favour of the Jaguar game system - but
the GOOD news is before they did, they licensed a number of
companies to produce clones of their TT and Falcon computers. And
one company, C-LAB, seems to be determined to make the most of what
demand there is for Ataris in the MIDI field, as well as looking at
expanding the market for other potential users of an Atari system.
So there's some life left in the old dog left :)

1350. Roger's Reign of Error

Newsgroup: comp.sys.atari.st
Date: 1995-07-27 00:00:00 UTC
From: Dan.Dreibelbis@balmybeach.gryn.org
Message-ID: <7b6_9507280138@tor250.org>
Source record: 161606

To all:

As of last night, I have formally placed a letter of complaint via E-mail to the Government of New Zealand/City Council's Internet server in regards to the behavior of Roger Sheppard in this conference - particularly his recent attacks upon Brian Brecroft, and his use of language which can be construed as racist (i.e. refering to Australians as "White Abos"). I have requested that they look into this conference and judge accordingly whether any action should be taken against Mr. Sheppard. I have not demanded that his account be quashed, as ultimately it should be up to them to decide how to proceed should such action be warranted; however, I did note to them that it seemed inappropriate that a government Internet server was being used for one person's twisted personal agenda.

Should anyone else be interested in also filing a complaint against Roger's constant bullying and abusive language in these conferences, here are the addresses of those you'll need to send your missives to:

postmaster@ix.wcc.govt.nz

hunt@ix.wcc.govt.nz

I didn't want to have to do this; but I had no choice. I will not have those who have given me good advice and who I consider my friends here, as well as those others who come for this conference looking for advice and help with their computers, be pushed around by the egomaniacal Mr. Sheppard, who is in obvious need of help spiritually and professionally regarding his conduct. His reign of error must stop, hopefully through his own admission that his behaviour here is wrong, and that he will take the steps necessary to repent of his doings and do them no more, as well as full apologies to all those he has wronged. I would hate to see him lose his Internet account, but if it is necessary to stop the personal attacks, so be it.

... I know now what I must do - Stimpy

This will probably be no help whatsoever, but here goes anyways. :) I
tried reading an ST-formatted disk on the Macs at school. It took a LONG
time for the Mac to figure it out, but it eventually did read the disk.
The DELETED file showed up, but I don't think anything worked. It was
very spammy, but if you REALLY need that stuff, it may be worth a try.
Sorry if it doesn't.

Good luck,

Dustin

ICD puts out a program called HDPARK.PRG of something similar. I don't
know if the program will be able to reason with your HD, but it's worth a
try. Also, I don't know if ICD will appreciate their program being given
away, so I'm not gonna offer, but you might be able to FTP it.

We haven't got floppys attached to our UNIX-network so I wouldn't know,
but try using a MS-DOS formatted disk and you'll know. Me think it is
system dependent.

Perhaps I was mangling my concepts a bit, but my basic point is that an ordinary ST can't run an interactive GEM-based WWW browser without a replacement operating system.

This is as it should be, as StraightFax is a commercial product.
It isn't PD or Shareware! You can order it from TOAD! To find out if it
will work with your modem, get Sysinfo2 or whatever the latest version
is from their bbs or Umich. When you run it it checks your whole setup
including the modem.

Source record: 161616

Just wondering, is version 1.03.04.05 of Gulam the latest English
version of it? I've just started looking at it and for a 90K program
it's incredibly powerful.

Also, is there a listing of key-commands etc. for both Gulam and
the emacs editor? The doc's are a bit sparse on this subject. I've
worked out that "0" on the keypad jumps into the terminal, and insert
is page up etc. But I've worked out very few control key combinations
(^L - redraw/mapping reset) etc.

Lastly, can I put Gulam into standard keyboard mapping directly on
entering rather than having to press Shift+HELP as having to use the
"#" key for the "\" symbol gets a bit annoying. :) It keeps telling
me "mark set" otherwise - how do marks work? :)
alias grovel Yes Master.

>
>Anything good or bad to say about it ?
>

The only bad thing is it's so slow and it doesn't use the the hard drive conventionally. It creates files on your hard drive which are then formatted and used as normal hard drives. This means you have a massive file on your hard drive for every softPC drive, I used to have two 20 meg files on my drive, one for C: and one for D: .
I think there is also an option to share a partition with the Falcon but I could never get this to work so can't comment on it.

The good point is that it does actually work, I used to use it with wordperfect version 5 if my memory serves me correct and it worked pefectly.

Ahhh! one more bad point, it only recognises 720k floppies. I never found out if this could be changed.

I have just read a 83k Atari formatted disk with Proview for Windows
from MacAfee. The prog came from Imperial College I think in the
Windows3 directory. I am sure it could manage a normally formatted ST
disk. MInd you I couldn't save it to another disk so it might not help
very much! It might suggest that a disk editor is the way forward
though?

>Hmmm, I think that makes sense :) Anyway, anyone got any experience of
>running this under OS/2?

Yes and no: Yes, I have OS/2 Warp and have tried running Gemulator 4.0 under it; NO, it doesn't work.

The program starts up OK, the Windows title bar changes to "Rebooting..." then to "GEMULATOR 4.0, TOS 2.06, 2M, 640x480", grinds away a bit at the disk (I have 8MB system and Warp really calls for twice that), then disappears without warning or error messages. It has been suggested to me that I try with a 512K memory configuration instead of 2MB, but have not done so as I have been spending all my time trying to get my old apps working under Windows 3.11.

I've found that neither Neodesk 3.03 nor Timeworks will run, and I have problems
with disk transfers, in particular the floppy drive will not recognize disk labels and on occasion the desktop folder windows suddenly lose all objects and report "0 bytes in 0 items".

I also installed the old Gemulator 3.3 code supplied as "GEM4DOS" on the installation diskettes, and found to my surprise that all of the problems I've had disappeared (although I've not yet tried Timeworks), so it looks like something's gone missing in the translation.

AstroPanic 94! rev. e is now available at a.a.u.e. under
atari/Games/Space/p94_reve.zip and ftp.cnam.fr under
pub/Atari/Games/p94_reve.zip.

Updates: Several small bug fixes plus new images, including mono
images for mono and 4 color modes.

AstroPanic 94! also won the YOLO shareware programming contest.
Thanks to everyone there and please someone online get back in touch with me.

What is AstroPanic 94! ?

It's a small shootem up that runs in 2,4,16 & 256 color modes in
any resolution you through at it. And it supports digital sound on all
atari 680x0 machines.

That's right a game that supports graphic cards on the Atari!

So if you enjoy a nice small bash now and then please try it and
let me know what you think. Registration which get's you more alien
types is only $5 (US) for online updates and $10 (US) for physical snail
mail copies.

I would also like to thank all my beta testers, registered users
and of course the folks at YOLO for their support, without which this
version would still be languishing on my hard drive.

After reading the thrust and riposte of messages to, from and about Roger Shepherd, I cannot escape the conclusion that clever Roger is pulling a lot of chains around here and is having a grand time deliberately provoking a lot of people just for the fun of it. He certainly is succeeding if that's his game.

He is not completely ignorant about things Atari; some of his remarks show more than a passing knowledge of our favourite beast(s).

If you really want to get rid of Roger, I suggest you merely stop rising to the bait and don't reply. Without sufficient response, I'm sure he'll stop his mumbling.

I also have a feeling the clever chap is a secret Atari user and admirer and is simply playing at the nasty character he portrays on the Internet.

Me and my trusty 1040ST have been successfully roaming WWW for the past several months. I'm connected via Community Learning Network, and one of the main menu items is "Connect to CLN WWW page," so it's very easy for me. The connection is via Lynx, which is text-only. This means that instead of the beautiful multi-million-colour pictures one sees on Macs, one gets, "[IMAGE]". However, I'm not browsing "the web" for pretty pictures, I'm interested in information. Oops, I seem to have gotten rather far away from the topic :). Anyways, I don't believe it's the computer that is the limiting factor, it's your connect service. As far as that goes, I can't help, but I just thought I'd let you know that it IS possible. I'm also sure there are telecomm programs out there that would give quasi-pretty pictures, but for me it's not worth the trouble (or $$$) :).

Good luck!!

I'm currently using STalker, a program which I find to be perfectly
suited to my needs: simple on the surface, but with some powerful
commands hiding beneath. Anyways, STalker can run as a program or an
accessory. The commands are used with a simple pull-down menu system.
(just like the good ol' desktop :)). Optionally, it can use GDOS
monospaced fonts. It has an auto-login feature, which is really handy
for lazy people like me :). Although I haven't used a lot of terminal
programs, this is the best I've used :). I'm not sure where you can get
your paws on a copy, unless your local (hahahaha) Atari dealer.

If you want Fax abilities, STraight FAX 2 is available from Toad
Computers for $80. Stalker 3 is available from Toad for $35.

Dustin
dlang@cln.etc.bc.ca

PS I don't work for Toad, I just received their catalog today, so it's
the most current pricing information I have :)

A friend recently showed me some nifty games for MS-DOS, One was a game called Warbots, where you program a bunch of robots using a Basic-type language, and watch them kill each other, it needs EGA or VGA graphics so it won't work with PC Ditto. Another was Crobots, a similar game where you program a bunch of robots using C. It used a simple text display, so it did work with PC ditto, although at an unbareably slow speed. These games a really pretty cool to watch,
and a good way to practice your programming skills. Anyone know of similar programs for Ataris? For Linux boxen? Is corewars anything like this?

It was none other than Simon Moore who did write on 26 Jul 95 that ....
SM> Hello there
SM>
SM> Is anybody here using DUFTP? It looks like a hell of a nice
SM> program but I'm having trouble setting it up. I'm running MiNT and
SM> MiNTnet from the TAF disks and disabled X-Windows by commenting
SM> out parts of the mint.cnf file but I can't get the dial script set
SM> up right. If anybody could help me out, prefereably somebody who
SM> has this working okay and is using Demon as their service provider,
SM> I would be very grateful.

DuFTP uses DIP as the Dialer and it needs some files to be in /etc instead of
the "normal" place for them to be (/usr/etc) try coping route ,slattach,ifconfig and iflink
from the later to former directories.

AS for the dial script Craigs example one needs only your IP address
in the $Local variable and Demons in the $remote variable then look for the
bits for the login requests and change those to your username and password.
I seem to recall having to make another small adjustment in the script for
something else so that it branched to error when something happened but it
was not critical ..the above SHOULD <ahem> still work :-)
I don;t however use duFTP to logon to demon but use DIP seperately to do it
and only when connected do I use DuFTP but I would say its much of the same
thing but you could try that if you still getting problems ??(i.e move dip and slip.dip to
a directory in your path variable.) and run
'dip slip.dip' from your command shell).

I just got the Toad Computers catalog today. The ICD link, which is a
DMA <--> SCSI adapter, is $90 new. The ICD ADSCSI+ with clock is $99.
If you have the room, I'd suggest the ADSCSI+ (it's not too big
anyways). I'm sure you could get one second-hand for cheaper, but I
don't know of anybody who's selling one. (and you can't have mine so
don't ask *grin*)

1384. Final beta release of MGIF v5.00

Newsgroup: comp.sys.atari.st
Date: 1995-07-27 00:00:00 UTC
From: d8klojo@dtek.chalmers.se
Message-ID: <3v7m6t$fsv@nyheter.chalmers.se>
Source record: 161696

After more than two years it's now almost time for another release
of the image viewing/processing program MGIF.
The final beta version is now available for anyone who's interested.

Since MGIF is FreeWare, I'd really suggest that you try it out if you
ever want to watch or manipulate (not draw) images. If you don't like
it, it won't cost you anything (I'd be interested in hearing what you
didn't like, though. ;-)

Traditionally MGIF has been a monochrome GIF viewer, hence the name,
but the last release (v4.2) could also load JPEGs. For the current
version the name is no longer valid on any point, since colour is now
fully supported.

A few things worth mentioning:
- Now completely GUI driven (no windows though), but the old text
interface is still available, for example if you want to run MGIF
from a shell started without GEM.
- Colour display in any ST/Falcon/TT graphics mode (where it's possible)
and on any 8 bit graphics card (via VDI).
- Fastest GIF loader around (Unless something new has turned up recently.)
MGIF can actually load and display an image in 8 bit colour quite a bit
quicker than TurboGIF 1.3 on a Falcon. Mostly it's the displaying that
is faster, but also the loading.
- Loads GIF/JPEG/Targa/PPM/(X)IMG
- Writes GIF/Targa/PPM/IMG
- Quite a few image processing functions

MGIF will not use any of the kind of tricks 'Speed of Light' or
'Photochrome' does to give nicer colour display in low res, 4 bit modes.

For a bit more information, see the longer article in c.s.a.announce when
it shows up or simply connect to the WWW/ftp site given in the .signature.
The text from c.s.a.announce can be found in a twice as long version on
the site, as can the full MGIF history file and the program archive itself.

All comments, suggestions, bug reports etc are very welcome.

1385. FS: 1040 STF

Newsgroup: comp.sys.atari.st
Date: 1995-07-27 00:00:00 UTC
From: gxa114@psu.edu
Message-ID: <3v7n5v$f7j@hearst.cac.psu.edu>
Source record: 161697

I have an old 1040 STF that I dont use anymore, it has 2 floppys and a color monitor. I just want to get rid of it, so the best offer takes it.

geof

gxa114@psu.edu

1386. STonX 0.4 released

Newsgroup: comp.sys.atari.st
Date: 1995-07-27 00:00:00 UTC
From: nino@mips.complang.tuwien.ac.at
Message-ID: <3v7ua9$1ri@news.tuwien.ac.at>
Source record: 161698

STonX is an Atari ST emulator for Unix with the X Window System. STonX includes
a VDI driver for X11, which is 20-100 times faster than the emulated TOS VDI,
so you can work comfortably with a fast GUI even on slow machines. It's still
very limited (no serial ports etc.), but I released it anyway in order to
get some feedback. You need a copy of TOS 2.06 (as a file named "tos.img")
in order to run STonX. Linux binaries and the complete source code are
available from
http://www.complang.tuwien.ac.at/nino/stemu.html

The best platform to run STonX on is a Linux-PC (GEMBench reports 280% CPU
speed on a DX4-100 relative to a 8MHz ST), or anything fast.

There is some on-line documentation available (look at the links from that
page), but nothing more (sorry). Please let me know what you think of it.

Regards,
Marinos

PS. People who don't have a keyboard which matches their TOS (i.e. US TOS
with US keyboard etc.) will have some problems due to the nature of the
keyboard emulation.

1387. Re: ??: 19" monitor for the Atari?

Newsgroup: comp.sys.atari.st
Date: 1995-07-27 00:00:00 UTC
From: gmiller@inca.co.nz
Message-ID: <3v7sjs$ntv@inca01.inca.co.nz>
Source record: 161699

Brian McWilliams (mcwilliams@wmich.edu) wrote:
> Just curious, my Cubase manual mentions a 19" monitor made by Atari
> for the ST. Does such a thing exist?

The SM194. (American market models may have been differently numbered, however). It is, however, also known as a Moniterm monitor.

The name is made up of several parts, to identify what it is : S = ST, M = Monochrome, 19 = 19 inch, 4 = "generation" number. (Whoever dreamed up this numbering scheme for peripherals deserves a heap of praise from me.)

It was originally for the Mega ST computers ("pizza-box with attached keyboard"), and used the internal Processor-Direct-Slot (which Atari calls the "Megabus") to connect a driver card for it.

In order to drive it, you need TOS 1.4 ("Rainbow TOS"), according to the salesman who demoed it at the Tariland Computer Club meeing in Auckland City, New Zealand in 1990. This need for TOS 1.4 was echoed by the Atari rep at the annual computer show a month later.

I believe that you can also use a standard SM124 monochrome monitor at the same time.

It displays 1280 x 960 pixels at a 66Hz frame rate. The "pixel clock" was something over 80Mhz.

Yey it does! And it will as long as I use an Atari computer. :)

There is nothing wrong with a little hope, that's for sure. But it
needs to be tempered with a dash of reality and common sense, too.

In the meantime, we can enjoy our machines of choice.

Hi, My sysop tells me that I can now become a point off his BBS.
He runs a 486 PC, and I'm on my ST.

I've got hold of BinkleyTerm, IOSmail and LED (and a German shell program
that's in German <believe it or not !>

I've also tried reading EZFIDO, the 'idiots guide to binkley etc'.

Excuse me a minute...ARGHHHHHHHH !!!! That's better ! :-)

Are these guys serious ?!?! Have you SEEN these programs ? Talk about
needing a Masters Degree in Astrophysics !!

So...are there any geniuses (geni-ii ?) out there who have Masters Degrees
in setting someone up as a point ?

PLEEEEEASE help me ! There is NO WAY I will be able to wrap my brains
around this without help :-)

I haven't got the faintest idea of what I'm doing !

Help me Obi-Wan, you're my only hope :-)

Cheers,

Kev.

AFAIK, these are to select whether you are using 256k [6 chip set] (not 128k
BTW), or 1Mb [2 chip set] TOS ROMS, and have nothing to do with the RAM.

Probably because of the fact that Queen Victoria (*many* years ago !)
refused to accept that Lesbianism existed. She was prepared to accept
that men had sex together, but being a weird old cow she couldn't wrap her
brains around two women. Also it probably has something to do with the
upper class public school system in England, where male gay sex was rampant
(and probably still is).

(Small correction to that blanket statement)

OS/2 v1.x was 16-bit.

Following the messy and acrimonious IBM/Microsoft divorce, IBM rewrote
OS/2 as a mixture of 16- and 32-bit code.

OS/2 Warp (v3) is 32-bit.

From: djs@jet.uk
Message-ID: <djs.806940547@gen-off-2>
Source record: 161561

Due to upgrade I am selling a CDROM, WITH driver s/w and a CD for Ataris.

Drive: NEC 2Xi internal, switchable SCSI-1 or SCSI-2.
Double speed, tray-loading. Front panel headphone socket and
volume control. Multisession etc, fully PhotoCD compliant.

S/W: ExtenDOS Pro v2 driver software, allows audio control as well
as data access. (Currently sold for £30 by HiSoft).

CD: Walnut Creek's Gemini Atari CDROM, full of PD, shareware, demos etc.
(£39.95 new, IIRC).

Price: £140, inc VAT, s/w, disk, postage (UK), etc.

This drive works with STs, Falcons and Macs. So should work OK with TTs too.

If interested, or you require more info,
please Email me at home (hoagy@cix.compulink.co.uk)

1405. Need help with MagiC!

Newsgroup: comp.sys.atari.st
Date: 1995-07-28 00:00:00 UTC
From: ppospis@mtroyal.ab.ca
Message-ID: <1995Jul28.123537.4982@mtroyal.ab.ca>
Source record: 161567

I have just gotten MagiC v2.0 and have been unimpressed with its performance so far on my 1040ST with 4Mb.

I am using ICD v 6.5.5 for my HD and MagiC causes the HD to boot twice before I get to the desktop. Does MagiC have a problem with ICD's HD utilities or just this version?

I have been testing MagiC incrementally on the regular programs I have been using with single-TOS and it doesn't seem to be work with any of them. The programs I have tested are Uniterm and an older version of Tempus.

Uniterm works fine as long as you stay in it exclusively, switching out of Uniterm to another program results in never being allowed back into Uniterm. Is this a result of a conflict between Magic's method of handling the serial port and the way Uniterm expects it to be handled?

Tempus actually works, however, it chews up all remaining memory and when terminated doesn't seem to return it. I have tried using LIMITMEM to limit the amount of memory TEMPUS gets but it doesn't seem to work. Any ideas on what is going on here?

This is rather disappointing since multitasking is the reason I bought MagiC. If anyone can suggest specific programs that they have working with MagiC I would be grateful. As well is there anyway of contacting the producers of MagiC with specific questions? Thanks.

1406. Re: Gemulator 4.0

Newsgroup: comp.sys.atari.st
Date: 1995-07-28 00:00:00 UTC
From: Chris Richardson <richards>
Message-ID: <3vbclq$4l8@mmddvan.mdd.comm.mot.com>
Source record: 161568

Most of my problems with Gemulator 4.0 have been cured by switching to
CHD mode (big files which look like hard drive partitions to the emulation
software). Unfortunately, now I can't read drive A.

I'm stuck with loading Gemulator 3.02 to copy files from diskette and then
running v4.0 to do work.

Darek blames Windows 3.1 for the "0 bytes in 0 items" problem and suggests
increasing the FILES and BUFFERS of DOS to compensate.

My 486/66 runs the software quite quickly. As a comparison I tested Timeworks
2
startup on my old ST against the Gemulator, and observed a substantial
reduction: from 1.5 minutes to 40 seconds total load time. This involves a
lot of GDOS fonts, too.

This message produced from 100% post-consumer materials and is 100% recyclable.

>
> Stupid Question: Is the UNIX format the same as MS-DOS?

There is no one Unix disk format - though most can read DOS disks with a
little help.

The command tends to be *something* along the lines of:

/etc/mount -t msdos /dev/fd0h /mnt

This attempts to mount the disk on device fd0h into the directory /mnt.

Note - this example hasn't a hope of working on your system - as I made
it up! Its losely based on Linux though.

Try

man mount

for ideas - though I think you might have to be logged in as 'root' to make
anything work.

OTOH I'd recomend using FTP. Assuming you can access the Unix machine
via a PC, there is a good chance that FTP software is available to you to
allow transfer between the PC's disks and the Unix machine.

:-)

Roland.

In article <3v8tgi$kk2@mmddvan.mdd.comm.mot.com> Chris Richardson <richards> writes:
>labels and on occasion the desktop folder windows suddenly lose all objects
>and report "0 bytes in 0 items".

On my windows for workgroup with win32s, I get the "0 bytes in 0 items" every other time I reboot Gemulator. This may be something to do with NVDI. Anyway, even with NVDI, it's too slow to be useable on a 486DX33. The reboot was not intentional also, it was crashing on one of my 'home brewed' application.

>I also installed the old Gemulator 3.3 code supplied as "GEM4DOS" on the
>installation diskettes, and found to my surprise that all of the problems I've
>had disappeared (although I've not yet tried Timeworks), so it looks like
>something's gone missing in the translation.

IMHO, Gemulator 3 is more usable on my system (sad about those large virtual disk files...) but when I upgrade to a Pentium 90/120 & Win95, I think Gemulator 4 will be good on it.

Regards
William

Yes I have had Atari from way way back, I now have 3 Ataries STFM 2.5 megs,
a STE 4 megs and a fully fited out MEGA ST 2 with ADspeed, 250meg Quantum,
Auto Overscan, and with about 4000 disks of software, what offers..:-)..

And now the BEST OF ALL a PC CLONE 486 DX4/100 with 16 megs
of Ram and a 1 Gig Hard drive, AWE32 and a 4 speed CD and with a 17" digital
monitor..

And guess what for far less than a Falcon with a monitor....

Yes and I also get local support and software for my PC Clone system...

Also if some of you can read this is a PUBLIC system that I am using and
its FREE and run by Local Goverment, and Yes I was born in the UK at Feltham
MX as it used to be called, very close to London Airport and the old
home of Aston Martin the sports car people.......

1427. Open letter to AW

Newsgroup: comp.sys.atari.st
Date: 1995-07-28 00:00:00 UTC
From: mandus.soderberg@master.ct.se
Message-ID: <ftn_2.203.203$fidonet.org_30193efc_Mandus.Soderberg@master.ct.se>
Source record: 161589

OPEN LETTER TO THE UK MAGAZINE 'ATARI WORLD'
/\

Dear Sirs,

I'm most disappointed in the review of Rainbow II Multimedia written by Nial Grimes. Not because of the low rating (4/10, when ST Format gave it 96%!), what I'm upset with is the way he wrote the review. First of all he seems biased towards Apex, but what's more important, he doesn't seem to have tested Rainbow II for more than 15 minutes. If he would have tested it I'm sure the article would have had more details (positive and negative ones), instead of dedicating most of the review to the interface.

I have the following objections to some quotes from the review:

"Apex Media has pretty much sewn up the high-end Falcon graphics market, but there's still plenty of room left for low cost art packages that can make good use of the machine's abilities. The original Rainbow slipped nicely into that category."
I see, obviously there can be only one Falcon art package costing more than ?29.95...

"At first Rainbow II seems like a major upgrade, but mentally strip out the parts that you will never use and you'll probably find that you're left with the picture and photo studios..."
Rainbow II is a multimedia program, intended to be used by people who want BOTH graphics and sound.
I don't believe anyone talked about "mentally stripping out" the drawing capabilities of Apex Media, just because its morphing and animation parts were more developed.

"...but when you're looking at a close to ?60 -a 50% stake in a copy of that giant among art and multimedia programs known as Apex Media -these things do start to matter, big time."
So ?60 is expensive, and ?120 is cheap?
Maybe Nial Grimes meant to say that Apex Media is far superior to Rainbow II, and therefore worth its price tag, unlike Rainbow II?
I strongly object to that. I mean, what is there to compare? They are two completely different programs.
Rainbow II doesn't have morphing and support for animations

(apart from the Sprite Studio), and Apex doesn't have sound
editing, slideshows etc.
As I see it, they have only one thing in common: Picture
editing, which in many ways is much more advanced in Rainbow II.
I would like to point out that I have nothing against
Apex Media.
On the contrary, I think it's a well written morphing/animation
package, and I know for a fact that many people have bought both
Apex Media and Rainbow II Multimedia as the two programs
complement each other.

"* where's the multimedia?"
I'm sure even Nial Grimes would find some multimedia aspects of
Rainbow II, if he'd only try the program out!...

I encourage you to publish the whole or parts of this letter,
even though I doubt that you will.
Also, feel free to forward this letter to Nial Grimes (I would
have sent it to him myself, if I only had known his address).

Best Regards, Mandus Soderberg /Addiction Software

1428. MagicMac trouble with TempusWord graphics

Newsgroup: comp.sys.atari.st
Date: 1995-07-28 00:00:00 UTC
From: mk@musik.auc.dk
Message-ID: <3va7na$14k@aud1.aud.auc.dk>
Source record: 161637

Tempus Word (2.8) text-files including graphics under MagicMac 1.2
PPC-version with NVDI 3.31 on a PowerMac 7100/66AV causes the
menu-items to disappear completely, but only in Tempus Word.
No problems with text-files without graphics.
Any solutions? (according to CCD there shouldn't be any problems.)

Don't just make statements like this without backing it up with facts.
Just because it hasn't been done, doesn't mean it is impossible.

> Not unless you are required to pay a royalty to a company that no
> longer exists. Besides, I was under the impression that they had
> bought a license from DR years ago. ;-)

You are correct that DRI "no longer exists".

In July 1991, at about the same time as Borland acquired Ashton-Tate, and IBM, Apple and Motorola joined up to produce the PowerPC chip and the computers which used them, DRI was bought by Novell.

It was my understanding that, when one purchases another company, all rights to copyrights and patents and so forth are transferred to the company which "swallows" the smaller acquisition.

Therefore, Novell owns the copyright rights to DR-DOS, GEM and any other DRI product.

I could be wrong about this, however. Any lawyers out there care to correct my interpretation?

1433. More memory to the TT, How much and where?

From: glupien@cyber1.servtech.com
Message-ID: <3vau9l$507@murphy.servtech.com>
Source record: 161644

I have a 486DX50 that I'm not currently using..

It has the following:

486DX50 VESA 3 SLOT
5 MB RAM
240 MB Hard Disk
2 Meg Tseng Labs VESA SVGA
3.5" Floppy

Lots of Etc. Etc.

Anyone Want to trade a Falcon system which is somewhat comparable and up to date (TOS, etc) for this sytem with an NEC 4FGe 17" monito? (unless of course I can use the NEC with the Falcon, in which case foret I said that...

(The PCI is a clone in a FULL tower case. It is not a piece of crap name brand. I will warranty it for a couple months...

I've also cot some other things that may be neat for trade. I'd like some atari stuff, so how about a 24 bit 600dpi scanner (full page scsi) a 24 bit TV frame grabber, a greaphics tablet, and some other goodies...

Might be worth opening the casing. There is a liitle lead with a miniatur plug
that runs from the battery compartment into the computer. Maybe that little
plug is dirty and could be cleaned with a little switch cleaner. It's a
possibility.

1438. Best way to upgrade MegaSTe video?

Newsgroup: comp.sys.atari.st
Date: 1995-07-28 00:00:00 UTC
From: jws4p@fermi.clas.Virginia.EDU
Message-ID: <DCFuGJ.C7x@murdoch.acc.Virginia.EDU>
Source record: 161647

I have a Mega STe and want to upgrade the video capabilities. Currently I only have a standard SC1224 monitor. I called Toad and they are out of Crazy Dots and Nova graphics cards for the Mega's VME slot. I was even going to settle for a multisync monitor so I could at least have ST color and ST monochrome without having two monitors (ridiculous), but apparently only 15.75 KHz horizontal scan rate multisync monitors are compatible with ST video signals, and those monitors aren't made anymore (and can't even be found in the monitors for sale news group). Anyway does anybody out there know of anything still available that would upgrade my resolution or at least give me multisync, or is this a lost cause?

Thanks,
John

1439. How to restore lost IBM partition?

Newsgroup: comp.sys.atari.st
Date: 1995-07-28 00:00:00 UTC
From: jws4p@fermi.clas.Virginia.EDU
Message-ID: <DCFv5z.Cvy@murdoch.acc.Virginia.EDU>
Source record: 161648

The first partition on my hard drive is IBM format so I can use it with a pc emulator as well as from TOS. The other day I defragmented my hard drive using Diamond Edge's optimize function. Suddenly I cannot boot MS-DOS from my hard drive anymore... I get a "Non System Disk" message. MS-DOS will still recognize the drive if I boot from a floppy. Thus I suspect that somehow optimizing the drive partition has removed the IBM information from the boot sector. So my question is: Is there a way I can restore the boot sector or write a new one without formatting the entire partition?
Thanks,
John

Just a reminder that we will be showing and selling the new
Gemulator 4.0 Atari ST/STE emulator for Windows at the Indianapolis
Atarifest tomorrow, July 29th, in Indianapolis. This is the 7th
year this Atari show has been held and our third time exhibiting.

Also at the show we will be releasing our brand new PC Xformer 3.2
Atari 130XE Emulator, now optimized to be 40% to 70% faster than
PC Xformer 3.0 with other new features. See our message in
comp.sys.atari.8bit for more info on PC Xformer 3.2 or visit
our web page.

Yep, try STarCall. There is now a 98% English version available (Ver 2.0E)
It's fully featured shareware comm's package with a 10 sec reminder to
register. Nice GEM interface with built-in editor and buffer (in their
own GEM windows) TTY, ANSI, vt52-100-200 & 220 emulation. Also has
terminal window which uses alternate fonts (GEM bitmaps, with Gdos). All
in all a pretty neat package that supports X,Y & Z modem transferes.

Should be able to find it on FTP sites in Europe, if not drop me a line
and I'l send you a copy (I'm the Australian support person)

Try it you'll like it......

Regards

1445. Re: Need help with MagiC!

Newsgroup: comp.sys.atari.st
Date: 1995-07-29 00:00:00 UTC
From: a1960563@athena.rrz.Uni-Koeln.DE
Message-ID: <3vd8hl$455@news.rrz.uni-koeln.de>
Source record: 161504

Hi,

ppospis@mtroyal.ab.ca wrote:
: I have just gotten MagiC v2.0 and have been unimpressed with its
: performance so far on my 1040ST with 4Mb.

: I am using ICD v 6.5.5 for my HD and MagiC causes the HD to boot
: twice before I get to the desktop. Does MagiC have a problem with
: ICD's HD utilities or just this version?

At beginning (every coldboot) the MagiC-Booter fires the old singletasking
system out of your RAM to install MagiC which is a complete OS on its own.
This is absolutely normal and nothing to be worried about.

: I have been testing MagiC incrementally on the regular programs I have
: been using with single-TOS and it doesn't seem to be work with
: any of them. The programs I have tested are Uniterm and an
: older version of Tempus.

The problem is, that older software usually does not support multitasking.
Sometimes it is helpful to run older software under the singletasking
mode of MagiC. Did you try this?
Otherwise, you should update your software, if possible.

: Uniterm works fine as long as you stay in it exclusively, switching
: out of Uniterm to another program results in never being allowed back
: into Uniterm. Is this a result of a conflict between Magic's method
: of handling the serial port and the way Uniterm expects it to be handled?

I do not know Uniterm, but I am working with Connect, which runs
GEM-based and supports multitasking alright.
Connect is available as English version as well.

: Tempus actually works, however, it chews up all remaining memory
: and when terminated doesn't seem to return it. I have tried using
: LIMITMEM to limit the amount of memory TEMPUS gets but it doesn't
: seem to work. Any ideas on what is going on here?

As textsystem I use That's Write, which is commercial software and needs
higher performance. It might be a bit slow on 4 Mb RAM.
But there are smaller text systems of the same software distributor which
should run as well: a smaller That's Write version and First Word plus 4.
Sure, these are not exactly simple editors, they are made for "heavy
textworkers" (What's the correct English expression?).

: This is rather disappointing since multitasking is the reason I
: bought MagiC. If anyone can suggest specific programs that they

: have working with MagiC I would be grateful. As well is there
: anyway of contacting the producers of MagiC with specific questions?
: Thanks.

The first thing striking me, when I changed from Single TOS to MagiC was the increase of speed.

The managing of memory is different in multitasking. Software needs to be adapted to this and shouldn't capture the entire RAM as older programmes usually do.

Here is the german (snail mail) address of ASH (Application Systems Heidelberg):

ASH
Postfach 102646
D-69016 Heidelberg
Germany
Fax.: 06221-300389

I don't think, it is of any use giving you a german bbs-phone-number. This would be a little too expensive from Canada to Germany, right? They should habe an e-mail address as well (I cannot tell you).

Another thing you can try: Have a look in the german newsgroups with a "maus.atari.software" or similar in it. These are the newsgroups where the programmers of MagiC are "present" in discussion. Send a request into this newsgroup (English should be no problem).

Bye,

Kerstin

Hello there: I need some feedback from the Atari community. GodFather Computer, Inc. currently manufactures 486/Pentium based windows computers and are thinking about making a GEMbino series system with the Gemulator card pre-installed and configured to work out of the box. Since Atari no longer makes computers and there are tons of folks out there still using the older Atari computers, we thought about adding the GEMbino system to our line up for those wishing to continue using their Atari software and also moving into a new system.

Are there people out there that are ready to buy that new system but want to continue using the Atari software also. GodFather Computer would like to offer this GEMbino system if there is enough interest. Please email me at ERCORP@AOL.COM with any responses.

We also sell Apple PowerMac systems and may look into offering a Mac with the preinstalled MagicMac software that runs Atari software on the PowerMac. If there is enough interest, we will look into acquiring direct capabilities with the makers of these fine Atari emulators/Operating Systems and offer them pre-installed in our great GodFather Computer systems. We have a 2 year warranty on the computers and 3 year warranty on the monitors. The computers come in desktop/mini/mid/tower design and the monitors are 14"/15"/17" in size. All this includes our GodFather Computer Welcome kit that easily gets the user on the way to computing and we even offer USA wide On-Site service at a small fee.

Let me now.

They are quite easily available in Germany, though...but only for MegaSTs,
AFAIK, perhaps for MegaSTEs, too, for they basically are a montior/gfx
board bundle.

Hehe!! ;-)

Yes.. Its not easy for beginners :-)

But i have a complete pointpkt on my BBS, so my users can download it and become points.. There is an easy step by step manual, and even a beginner cant screw it up. The filename is POINTPKT.ZIP and can be Freq from either my NeST Adress 90:1102/0 or my FidoNet node 2:200/423.0 . I cant UUencode it and send it to you because its to big. (500kb) (Im only alowed to send max 128kb via my Gateway). But if you send me a disc, and your address i will return the pkt to you. You can also log on to my BBS (Kockens BBS +4646250256) and DL it if you want. If not: Send a disc to:

If your not real serious, GFA Raytrace was on a STart cover
disk years ago. It will run on my STf switched to TOS 1.02 but
not switched to 2.06. Actually its kind of fun, and produces
nice results if you have something to do while it texture maps :).
There is also a PD program to convert the file format to a Spectrum
format.

1453. The Recipe Box (5.0)

Newsgroup: comp.sys.atari.st
Date: 1995-07-29 00:00:00 UTC
From: awatson@pacifier.com
Message-ID: <3vdkgj$3lp@pacifier.com>
Source record: 161512

The Recipe Box
The Leader in Recipe Storage Systems

In May of 1992, Mountain Software introduced The Recipe Box to the Atari ST community. Since that time, the program has been through numerous revisions, and has been ported to the Commodore Amiga and Apple Macintosh. Now, more than a year since the last revision, we are happy to announce the arrival of The Recipe Box 5.0 for the Atari ST!

Rather than trying to build on old technology, we completely rewrote version 5.0 from the ground up. The result being a more compact, more reliable, and more flexible application.

One of our primary goals in version 5.0 was to make the program even easier to use, and the new button bar was the first step towards that goal. You can now jump effortlessly between all sections of the program instead of quitting back to the main menu for every task. In addition, we cleaned up most menus in the program by switching to context sensitive mouse response. Now right clicking an object will bring up the appropriate editor for that object.

By eliminating unneeded buttons in the index menu, we were able to increase chapter titles to 24 characters, and record titles to 50 characters. This means that you will now have more room for those recipes with long titles!

In addition, we added a new "information" record type. This new record type lets you store up to 5 pages of 80 column text in each record. The possibilities this new record type opens up are enormous. These include simple uses such as storing nutritional information or cooking tips, up to entirely new uses for The Recipe Box such as personal information managers, diaries, address books, song/poetry books, family histories, inventories, etc.

New database structures allowed us to increase storage capacity to over 65000 chapters with 2000 records in each chapter. And, new loading routines mean nearly instantaneous chapter loading.

The internal text editors have been greatly improved to be faster, more feature filled, and easier to use than previous versions.

The recipe import formats have been enhanced, and we've added additional formats, including "Mastercook II" and the "Usenet Cookbook". Recipes that do not adhere to recognized formats may be imported easily using the manual import feature. And, any text file may be imported as an information record for easy management within

The Recipe Box.

As with earlier versions, recipe records may be exported directly in the latest "Meal-Master" format for easy recipe exchange with other users. And information records are easily exported for use with other software.

The accuracy of the print routines has been greatly improved, and now supports multiple print formats including various notebook sizes, 3x5 cards, and 4x6 cards.

The new grocery menu has undergone many improvements to improve the speed of the database, and to make preparing grocery lists even easier.

A new "Locate" feature allows you to quickly find the item you are looking for even when there are many items with similar descriptions.

The grocery item editor now includes a "Staple" field for automatically inserting those items you buy on a frequent basis. In addition, any changes made to an item in the item list are reflected in both the item and grocery lists.

The shopping list created by the grocery manager has been improved to be more readable, and more compact than previous versions.

The old Meal Manager of previous versions has been replaced with a new Calendar Menu. This new menu features a full graphic calendar and an easy to understand event list. Any record in the database can be attached to any date on the calendar, or simply drag a record to the calendar to attach it to the current date. Personal notes may be entered on any date in the calendar as well.

There is no limit on the number of events you may store in the calendar, and you may place as many events on a single day as you wish. In addition, events will be retained for as long as you wish, though outdated events are easily removed when you desire it. Or, simply drag the event to a new date on the calendar.

The batch menu allows you to select any of your desired records for printing or exporting.

The new "Find" menu allows you to search the entire database for records matching your search string. The complete text or the titles only of each record may be searched depending on your needs. The results of each search are maintained so that you can quickly view multiple records that match your searches.

The new graphical user interface is now much more configurable, and includes the ability to use up to 16 colors if your system supports it. Virtually every aspect of the interface is user selectable, and a number of presets are available to get you started.

A new help system is built-in providing instant access to the program documentation, from any point in the program. The help system features a hypertext style document allowing quick access to any part of the text.

A new statistics display makes it easy to determine the program version, the registered owner, the number of records stored in the database, the free memory available, etc.

The Recipe Box runs on all Atari ST, TT, and Falcon computers with 1 Meg or more of RAM. A hard drive is highly recommended. GDOS/SpeedoGDOS is required for all printing functions. The program runs in color or monochrome in any resolution of 640x200 or greater (ST Medium, ST High, or greater).

The Recipe Box lists for $45.00 and is available through better Atari dealers. Or, you may order directly from Mountain Software at:

Mountain Software
6911 NE Livingston Road
Camas, Washington 98607 USA

Check or Money order in US Funds only! Shipping is free in the US and Canada, $5.00 elsewhere. Residents of Washington State, please add 7.6% sales tax.

Registered users of any previous version may upgrade to version 5.0 for only $20, by sending a copy of your receipt, or a photocopy of your master disk.

Users who have purchased older versions on or after June 1, 1995 may receive a FREE update by sending a copy of your sales receipt showing the purchase date.

Questions regarding The Recipe Box may be directed to the following E-mail addresses, and a demo version should be available at most of these sites soon.

Does anyone know what brands of tape backup drives out there are compatible with both the SCSI interface on a Falcon and the archive software currently available? I'm thinking of getting a tape drive and I'm interested inf finding outwhich ones to avoid...

Thanks!

David (lamarth@delphi.com)

I'm currently using my ICD Tape drive on the Falcon. I had to "modify" it
a bit to be able to use it, but it works great. The mod I did was to
remove the host adaptor that was connected to the hard drive also in
the case. You may be able to find less expensive tape units; I believe
you can only use a SCSI device, though.

>Just because it hasn't been done, doesn't mean it is impossible.

As I said earlier in the thread, standard GEM neither supports nor allows
the required multi-tasking and networking facilities. Why do you suppose
Chimera requires MiNTnet and X, and at least one other chap is working on a
GEM-based browser which requires MiNTnet and a replacement version of GEM?

>in terms of protocols they can use.

I believe the MIDI and serial ports are completely separate - the former uses an ACIA and the latter uses the MFP chip. Anyway, this is bogus multi-tasking done with interrupts. Other examples are chip music while you use the desktop, background printer spoolers, etc. None of these requires a great deal of processor time and can quite happily run under the standard GEM desktop. Also, you'll notice that all these examples simply throw bytes at a peripheral. They run and make a note of where the next bytes to be transferred are (for the next interrupt) before terminating. A SLIP connection, on the other hand, is far too complex to be done this way. (But if anybody knows better, please speak up.)

>I still need to sort a few things out (problems with the keyboard on some
>X displays, and some legal questions regarding the TOS system fonts).

...hm reminds me of something. In my Edith Professional port to
X Windows, I carefully copied, dot by dot, the busybee and flat hand
mouse forms (who will not agree the busy bee is much more cosy than
that _UGLY_ X window hourglass), thinking Atari is near-dead anyway, so
who cares here.

The same of course goes for the font (except I have absolutely no wish
to use that in favour to a blasting lucida typewriter 18 or helvetica).

Anyway, they can't even afford a lawyer these days, can they? And what
for?

If you get hold of the archive software, GEMAR, you will find the package
contains a list of configurations on which it has been tested OK.

From: kevan@empyr.dircon.co.uk
Message-ID: <07291995.201645@empyr.dircon.co.uk>
Source record: 161523

Can anyone suggest a source for a 68 pin PLCC socket (for the Blitter chip) ?

I bought one, but the pins do not line up with the holes on the Atari board :-(The one I got had the two rows of pins down each side, in line with each other like this : . . . . . .
. . . . . .

What I need is one that has offset pins like this : . . . . . .
. . . . . .

Can anyone help please ?

If I can't find the correct socket, I have a funny feeling I am going to try wiring up 68 wires to the pins on the socket I have, not a pleasant thought !

Cheers,

Kev.

Well there you go. I could never get Captian's QWK to work hardly at all so gave up on it. Used Mico Talk for awhile but didn't have all the features I wanted at the time. Also tried IMHO, bombed way to many times for me. Found MRII and have been using it without a glitch for ages. Downloaded the demo, used it for a bit.. never hicupped once, so registerd it (nagware has to be the best way to force registration.. jeeze it drives me nuts). Anyway, its been great for me, it has all the features I wanted plus some.

and to answer your question: "how was your day?" better then yours by the sounds of it! :-)

1468. Chimera questions

Newsgroup: comp.sys.atari.st
Date: 1995-07-29 00:00:00 UTC
From: carl@hender.dungeon.com
Message-ID: <807046204_OASIS_@hender.dungeon.com>
Source record: 161527

In article <mkbbs31849@mkbbs.co.uk>
graham.jarvis@mkbbs.co.uk said:-

>1) What,exactly,is included on the installation disks?

Everything to install Mintnet, XWindows and the browser Chimera onto one of
your hard drive partitions.

>2) What else do I need apart from an Atari computer and the disks do I
> need?

A Hard drive and a few minutes.

>3) Can Chimera be used with a Compuserve connection?

No idea.

>4) What Falcon resolution does it work in?

I had to set my Falcon resolution to the SVGA 2 colour setting using the
program Bootconf. You may have come across this file, it sets the NV-RAM in
the Falcon. Run this program once and the you can use Stoop as per normal but
choose the XWindows/Mint set up.

>5) Is it really a hassle to set up?

The real hassle comes with ST/Falcon users with only 4Mb RAM. Chimera/XWindows
will only work fully with more than that.

>6) Is it any good?
>
(see 5) I'd say probably yes on a 14Mb Falcon...

1469. FPU add on for STE

Newsgroup: comp.sys.atari.st
Date: 1995-07-29 00:00:00 UTC
From: nanos@cix.compulink.co.uk
Message-ID: <DCHozr.ErA@cix.compulink.co.uk>
Source record: 161528

Is there a cheap (around 10-20 UKP) 68881 or 68882 FPU add on for
the STE, that is also easy to fit, and what languages support it?
(Ideallly ones that are PD and/or very cheap.)+(Lazor 'C'?)

The reason I want this is that some home grown software I have
requires a lot of floating point work, and it would be nice to use
my STE as a stop gap whilst I save for a PC.
(Or get my super computer fixed.)

Nigel

>> GEM window...
SKM> Perhaps I was mangling my concepts a bit, but my basic point is
SKM> that an ordinary ST can't run an interactive GEM-based WWW
SKM> browser without a replacement operating system.

not quite a replacement OS but needs the network sockets (Which is what
mintnet is) ... but then that much is needed by any operating system . Some
obviously have now gone for building it internally to the OS but that maybe
not IMHO be an altogether good idea ...

1474. Re: World Wide Web

Newsgroup: comp.sys.atari.st
Date: 1995-07-29 00:00:00 UTC
From: johnmoon@connexus.apana.org.au
Message-ID: <3vdo2u$gpv@studioweb.com>
Source record: 161594

: >Question: How do I access the world wide web? How do I get
: >started? Have other Atari users had success accessing the www???

Hmmm... well it depends on what sort of Net account you have.

If you are using a standard Unix Shell account, and you are running any
of the standard Atari comm's programs, you can access the WEB by
using "lynx".....just type the command lynx
You will then get an ascii display NO GRAPHICS!!!!! but that's cool,
it's so much faster than using a web browser like Netscape, mosaic etc.
if you want to retrieve info quickly. If you want to be entertained by
all the pretty pic's, then you will need to have a slip/ppp account,
and a WEB BROWSER. There is at present a web browser for Atari which
runs under MintNet, X-Windows and uses the Chimera Browser. It works
fine and with the TAF disks which you can get from either ftp at Hensa
and other places (ftp.cnam.fr) it will self install itself. You will
need a separate HD partition with a minimum 10meg I recommend at least
20meg if you want to install any additional mint clients. The BIG
problem for ST owners, is that even tho the thing is perfectly usable
at 8mhz, 4 meg of Ram is NOT ENOUGH to be able to view a web page
in all its glory! Chimera will bomb cos it needs the extra ram
to display any .gif's that are on the Web Page in question.
I suppose if you disable X-Windows it may free up some Ram, but I
cant really say. Some other Mint-Heads here may be able to take it
to the next step. If you want to be entertained, with the pretty
pic's etc, then get a PC. Me, i can live without the graphics, It's
just the information from the web that I want, mind you, I have heard
that there are a couple of other projects going on which may mean us
average ST owners can see the Web like PC users. FINGERS X'd.

In fact the latest versions (128->) of CoMa have English docs and an
English version. It is a bit expensive though but does all sorts of
things. It is crippleware and recieves fine but only sends a very
short fax until you register. If you just want to recieve try BTFax
which is free and designed to work with Binkley.

Source record: 161459

It was none other than ppospis@mtroyal.ab.ca who did write on 29 Jul 95 that
... p> I am using ICD v 6.5.5 for my HD and MagiC causes the HD to boot
p> twice before I get to the desktop. Does MagiC have a problem
p> with ICD's HD utilities or just this version?

No that is becuse Magic completely replaces TOS with its own OS routines and
the reboot is due to the install of this.
ICD should work fine but I think most people will tell you that HDDriver is a
faster more compatible and more supported Driver system these days.
p> This is rather disappointing since multitasking is the reason I
p> bought MagiC. If anyone can suggest specific programs that they
p> have working with MagiC I would be grateful. As well is there
p> anyway of contacting the producers of MagiC with specific
p> questions? Thanks.

Worked fine on my old FTN point system software real nice
(Semper/Jetmail/LeD) which was perhaps why I liked it so much , I could dial
out whilst still editing mail or doing other things.
TBH the programs you mention are somewhat older than magic and are If
I am not mistaken unsupported now. I found very few programs not working
with magic and worked very much faster in general. Most GEM programs with
versions released post magic2 release will work.
Replace Tempus with Papyrus for docs or Everest for edit.
Replace Uniterm with Connect.

: I just installed SEAGATE ST5660A IDE-drive inside my Falcon, and IT FLIES!

I know it too - its name is Decathlon!

: Seagates don't have the best reputation, but this is something:
: 2.7 MB/s (How Fast test program)... =-)

I have a new model from Seagate - Decathlon 850! I tested it on my accelerated
Falcon (20 MHz) and I've got 3.3 MB/s !!!
So it is the _fastest_ HDdrive I've ever seen and it is a far faster than any
SCSI drive on a Falcon...
The Decathlon is really "Multimedia-ready" (D2D recording etc).

: The previous Seagate model with slightly smaller capacity, only (?) transferred 1.7 MB/s
- so this 5660 is a lot faster, though t

Yes, it has to be the "Decathlon", not the "Media"...

: I recommend strongly!

I recommend it to everybody with Falcon too!

Petr

>other program to accomplish the same thing?

No need for that, especially on Falcon030. All Atari shipped drives from Megafile 60 Rev. 2 onwards, autopark their heads on power-down. Falcon internal drives are 2,5" notebook style drives that are explicitly made for portable systems; these do of course also park and secure their heads when turned off.

Hi Thorsten. I was using an unreg. demo version and my time was 30 1.112538e-308xpired
when this started to happen to me. After much hair-tearing I re-extracted
connect.prg from the archive and the problem now seems to have gone away
(but my time is still running out!). It seems funny that a corrupt .prg
should SEEM to function OK (apart from Z-mod) instead of giving bombs -it's
a funny old world :)

From: Dan.Dreibelbis@balmybeach.gryn.org
Message-ID: <ac5_9507311259@tor250.org>
Source record: 161465

M > Just curious, my Cubase manual mentions a 19" monitor made by
M > Atari for the ST. Does such a thing exist?

for the ST? not that I know of. However, Atari DID make a 19"
monitor designed for use with the TT. As well, someone a few years
ago developed a card that, with driver software, could allow a Mega
ST to utilize a Viking 19" monochrome monitor. I saw this in action
at an Atari dealership in Scarborough (a borough of Toronto) and it
looked quite slick, especially if you're running something like
Calamus, which benefits from a larger screen size.....

One of the reasons I'm considering a C-LAB Falcon Mk. I is the
ability to use a larger monitor, for use with both Calamus SL and
Logic - I really want to get more on my screen :)

H > of the same reasons I and many other programmers do... ease of
H > use, speed of development, and overall performance. It ain't
H > ATARI BASIC. :)

A question - I've always been interested in doing some
programming of my own, but have always been bogged down by what I
see, to me, as complex gobbledegook. My recent attempts with
programming .HYPs for ST GUIDE, however, is showing me that perhaps
I may have a small knack for doing some simple programs.

In your opinion, then, which of the languages should I be
looking at to start as a good building area for a somewhat complete
beginner? I've heard lots of good things about GFA BASIC and HiSoft
BASIC - should I be looking at those? Would either make a good
starting language?

... Without my ignorance, your knowledge would be meaningless.

Straigt Fax can be ontained from System Solutions in the UK (and IIRC from Toad in the US). It's pricey though.

If you use the USR Sportster, be warned that this is Fax class 1 and 2.0. Clas 2.0 is different from class2, and Straight Fax doesn't yet support it, so you have to use the slower Class 1.

What happened to the English version of Junior Office?

We are a few people here who already use the programs you talk about.
Though i would like to advice you to get Semper insted, as Binkley is
a very hard program to go through unless you know what your doing, which
i doubt you are 8-)
But if you really want Binkley, we can get that to work as well if you like.

I could start a major message about how to set things up, but this would lead
to a very big message. It would be better if you told us what exact problems
you have. Or perhaps try call someone near you who already runs such a system.
who can tell you more about this. It's highly needed and recommended that
you know exactly whats going on.
For your information, people who knows what they're dealing with in this
matter, use around 10 minutes to set up such a system. For people who doesn't
and don't get any help, it can takes months to understand 8-)

In case you can't find anyone near you, feel free to write me, and i'll
guide you through this as best as i can via email. (this may take a while
to get it up running though).

Last, when i started this kind of networking, i was at the very same spot
as you. It took me a very long time to understand. I had a friend in The
Netherlands to help me.

: PC Ditto. Another was Crobots, a similar game where you program a bunch of
: robots using C. It used a simple text display, so it did work with PC ditto,
: although at an unbareably slow speed. These games a really pretty cool to
: watch,
: and a good way to practice your programming skills. Anyone know of similar
: programs for Ataris? For Linux boxen? Is corewars anything like this?

Corewars is exactly like this, though it is not C; it closer to assembler
than anything. There's also Mars, which is also a Corewars-type game.

And if you're into the more technical aspects -- hardware design --
there's a great program called Robugs, where you design tiny computer
"bugs" using various gates (AND, OR, NAND, etc.) to give them
instructions, and a rudimentary memory system -- very brilliant. You can
program bugs, watch them reproduce, die, feed, or fight one another.
Comes with a lot of sample bots, too.

There's a game for the STs called ROBUGS. You build wee robots out of
logic circuits (and, nor, or, ex-or and other gates). It's a pretty good
way to learn about digital circuit design, and alot of fun.

>PC programs that some dork uploaded into the Atari area...)
>
I went through this a couple of months back when I bought a fax modem..looking
for good English programs. The best I could find were German.. I currently use
one called Junior office which is available for FTP just about everywhere. Coma
is also very good, but the demo version is so called "crippleware" and is
really only useful for demonstartion if you dont send off your registration.
Junior office is usable as it is though, but cut down from the fully registerd
version. The German menus are fairly intuitive, and it is so straightforward to
complile a fax from text and/or graphics. I am sure there is probably an
English rsc file available if you register. It seems to be an Atari fact of
life that much of the best software has German origin, that's my experience
anyway.

Right, it does have to be a SCSI drive. I was thinking of trying to find a used PC external tape drive with SCSI, but I wasn't sure what brands would be supported by Atari software.

They already advised a gfx board to you at Toad. Buy one.

Nope, they are not compatible with games, but that is IMHO only a slight
drawback. Just keep your SC1224 and buy an additional SVGA monitor.

I'm not convinced. If it's a straight GEM browser with all the SLIP stuff
built in, what happens if you use a desk accessory, or call up the file
selector? (Or even have a dialog box to negotiate?) Unless the actual
connection was done with interrupts, and I've got serious doubts about
that..

>It is possible to run Mint and Mintnet and still run a SINGLE GEM

So the multi-tasking kernel runs the application, and not the other way
around.. This actually sounds ideal.

1511. ======== Using my ST to cross-post files to differnt newsgroups ???

Date: 1995-07-30 00:00:00 UTC
From: graphic@delphi.com
Message-ID: <xLGAhrU.graphic@delphi.com>
Source record: 161540

Can anyone give me instructions on how to post an ASCII file to usegroups
on the internet? In reading various rec.photo. groups I will see the same
message posted to reach all interested parties. How do they do it?
I also see quotes from a previous post preceded by ">" on each line.
Is there any Atari software that supports capturing a newsgroup message, and
adding a reply to it *and* uploading it to *several* differnt usegroups?
Please send me an e-mail message if you can solve my problem....Thanks.

1512. Infocom Games

Newsgroup: comp.sys.atari.st
Date: 1995-07-30 00:00:00 UTC
From: jtc@thunder.cis.ufl.edu
Message-ID: <3vgofr$qup@sand.cis.ufl.edu>

I am hoping some fellow Atarian can help me. Back in 1986 I bought 2 Infocom games - AMFV and HHGG. Recently I came across those 2 packages and decided to play them again. They had been stored away for about 5 years. But the ST can no longer read the diskettes. I have tried reading the disks in several different systems but nothing works. I am hoping that someone can help me recover these 2 games. I still have the original packaging and diskettes, so I just need replacement disks. Even copies of the files would be fine.

Please respond with email
jtc@cis.ufl.edu

: |
: ||||Can you add a graphic board for the ST/Falcon?
: |||
: ||| Yes, and yes.
: ||
: ||After you hack it up..
: |
: |And your point is? BTW, for MegaST, MegaSTE and TT it's unnecessary to
: |"hack" them "up".
: So, when I got my clone, I should have gotten an Atari with
: one measely expansion slot, that isn't even standard accross
: models and payed more for it to boot.

: Not to mention that there are 4 ataris with expansion busses
: and 3 different busses making anything bought for a MegaST
: a very expensive doorstop. Not to mention Mac-esque video card
: pricing.

: Nevermind that the vast majority of the installed userbase is NOT
: running TT's or a form of Mega.
Just to add to this confusion. I found the best way to upgrade my Atari
system is by using the Gemulator 4 card. Considering I paid $70
for a 24 bit Vesa local bus card for my PC. It gives me 16 million colors
on the 640 x 480 resolution for the best colour depth. Or the most useful
on the Internet when using Netscape is using 800 x 600 in 16 bit color.

I'll soon be getting Gemulator, and I hope to be running Atari programs
such as Calamus SL in full colour where I couldn't before on my unupgraded
Mega 2 ST.

No flames. I sold my Atari system ... but kept ALL my software in the
even I would do something like this.

Eric

Well, I had such a 19' moniter (Proscreen TT) for a very long time.
The quality is VERY good. It looks like a sheet of paper. This
monitor uses 1280x960 with 72 Hz. The price (for a used one) is
in Germany $400-$550.
Can you imagine a SM124 with a resolution of 1280x960? That's it. The only
difference: the 19' uses the whole place on the screen. The SM124 doesn't.

Now I use 1024x768 with 256 colors and 75Hz on a 17' monitor.
And it's the same Atari, but it has a grapiccard.

That is correct. But if you use a TT you don't need any additional
hardware. Just plug in..... Then you can't use it at he same time
together with a SM124.

>It displays 1280 x 960 pixels at a 66Hz frame rate. The "pixel clock" was

You're wrong. It displays a frame rate of 72 Hz.

>ICD's HD utilities or just this version?

No, it's all Ok with the ICD utilities. MagiC needs a reset to get
into a defined position. But this reset is only needed after a coldboot.
This doesn't matter at all and performs a better stability.

>I have been testing MagiC incrementally on the regular programs I have
>been using with single-TOS and it doesn't seem to be work with
>any of them. The programs I have tested are Uniterm and an
>older version of Tempus.

Well, you're using two very old programs. Both are not clean programmed.
This is not a problem of MagiC!

>Uniterm works fine as long as you stay in it exclusively, switching
>out of Uniterm to another program results in never being allowed back

Use a good program! For example: CoNnect, CoNnect, CoNnect. :-))
But if you don't like CoNnect then there are a lot of others: Rufus,
STalker, Starcall and a bundle of terminalprograms I don't know.

>Tempus actually works, however, it chews up all remaining memory
>and when terminated doesn't seem to return it. I have tried using
>LIMITMEM to limit the amount of memory TEMPUS gets but it doesn't
>seem to work. Any ideas on what is going on here?

These kind of programs MALLOC() all reachable memory. This is not
a problem of MagiC that the programmer made a mistake! Good programs
use only the needed memory.
Try EVEREST, 7UP, QED, EDISON, XEDIT or another one.

>This is rather disappointing since multitasking is the reason I

C >
Try a DSDD floppy at 720K formatted on your PC. Just pop the disk into
the drive on the ST, and copy your files. The PC and ST disk format are
compatable. More so on later versions of the ST. There are also formaters
for the ST that do PC format.

The other option is though the modem, or a null-modem. The disks are the
quickest and less complicated though.

1524. Selectric problem

Newsgroup: comp.sys.atari.st
Date: 1995-07-31 00:00:00 UTC
From: hallvart@oslonett.no
Message-ID: <3vj235$cif@sinsen.oslonett.no>
Source record: 161403

I'm wondering if anyone has the same problem as I have with the
"Selectric" file selector, or if it's just due to my installment and working on
a high density disk drive....

I normally use a RAMdisk (M:\) and the built in disk drive (A:\). I don't have
a hard disk (yet).

The problem is this, that when I change disks and want to load something from
the new disk it doesn't return to the root, but stays in the same path as the
previous disk! That means I have to move it back to the root "manually" by
clicking at the "\" at the top of the little square "box" on the left.
If I just click on the new file to be loaded it just adds the new
directories to the path, but gets me nowhere.
Anyone with the same problem? I just want to find out if this happens with
selectric or if I've done something wrong with the connection of the disk
drive.

This worried me at first too, but it's actually how it is meant to work.
After a cold boot, MagiC forces a warm boot. Its no problem if you have
a boot manager, I find.

Most of your other problems are caused by programs which break the rules
and do things at too low a level. I'm afraid you'll may have to replace to
programs with less naughty ones.
[....]

>Uniterm works fine as long as you stay in it exclusively, switching

It's probably more of a GEM conflict.
Try switching into Uniterm's `Help' mode (The part where you can see the
menu bar and a list of key commands.) Then switch apps from there. This
fixed lots of problems under MultiTOS, but I haven't tried it under Magic.

Failing this, try Connect, which is much cleaner, but somewhat slower, than
Uniterm. There are lots of other term programs out there too, like Rufus,
FreezeDried, etc.

S > This person is a BIG lier and has told many many lies about be
S > on the net, evenstating that I had caused problems on GEnie, I
S > don't post articles on GEnie atall..

Roger, stop it. I think enough people know me well enough here to know that I am NOT lying, nor have I lied to anyone on here.

As for the GEnie thing - I was never claimed that you caused problems on GEnie, EVER. In fact, the original thread, which was not posted by me, talked about how certain GEnie people were laughing about the wrongheadedness of a certain Roger W. Sheppard in this conference. When you replied in your ascerbic manner that they were "lying", that there was no way that they could have read those posts on GEnie, I countered that they could have read them in the Internet access GEnie has (not knowing at the time that GEnie only allowed for Internet mail sending and receiving only).

Next thing I know, I get a private e-mail from you in which you pointed out that fact to me (after calling me a liar), and also mentioned that the Usenet postings could be had in the ST ROUNDTABLE's library in compressed files (why didn't you mention this fact in the open, BTW - or were you afraid of being caught with your pants down again?) . You also threatened that if I "lied" again, that you would contact my postmaster and have me kicked off the board where I access this feed.

At no time have I EVER "lied", Roger. I've been wrong, but I am NOT a liar. And anything I've said about you here, IN THE OPEN, is the TRUTH. THE TRUTH.

S > Also this person has never ever lived in OZZ and does not know
S > the hatred to English people their, I lived their for 4 years
S > and many of us were called BLOODY POMMY BARSTARDS and they
S > ment it, to shut them up we refered to them as White Abo's...

I may not have lived in Australia, but I did live in Western Canada for a number of years, in a very conservative small city. During that time I, being of a somewhat nonconformist nature (I dislike bigotry in all forms, think nuclear war is stupid, have religious beliefs not considered in mainstream Christianity to be "normal", have this thing against having sex before marriage and don't believe in "male bonding a.k.a communal barfing" :)) as well as being a landed immigrant from the United States, I'd been called many things like a "dweeb", a "dirty Yankee", a "retard", and other things I can't and don't care to repeat here, had my sexuality questioned, been roughed up by beer-swilling punks and told to get

out of town, and had even been threatened with death by one redneck oaf. As you can see, I am no stranger to suffering the slings and arrows of thoughtless people. But I almost never let it get to me, and certainly never tried to get back at other people by hurling epiphets back at them of a racist/sacreligious nature, nor did I stoop to their level - well, maybe strongly applied sarcasm :).

TWO WRONGS DON'T MAKE A RIGHT, ROGER! Despite what you may think, that very term is racist, and designed to hurt people. Or is that what you want, as part of your little game? Please spare me from justifying your actions.

Hello everybody !

I've got a question concerning my machine.

I've got a MEGA ST2 upgraded to 4mb.

I bought ot as it is second hand.

Now I removed the cover, because it started

quitting some time ago and I thought

of the old ATARI overheating problem.

Since I removed the cover it stopped quitting.

But as I removed the cover I discovered that

a component is missing which apparently had once

been part of the machine and was removed some time.

Since I know nothing of computer architecture

I don't know what this component does and why

it had been removed.

Maybe anybody could tell me?

I checked with a friend of mine who has also an

upgraded MEGA ST2, and in whose machine this

component is still present.

It is located at the front of the machine, it is the

second from left.

It's a seven pin component named 74LS11.

It houses three and-and circuits, as I learned from

an electronics catalogue.

If anybody has any information on that, please

respond directly to my e-mail adress.

Thanx a lot.

fp270@fim.uni-erlangen.de

NH> images? I have managed to get data input, but it is very unstable,
NH> and flickers a lot. If you know how to access the hardware, please
NH> get in touch.. I am looking to write a new version of a grabber.

write to Rombo UK , can't remember the name of the person who developed the Atari software But I know that he will make available to you the full source code and maybe some other information if you want it . They are very helpful people who were good supporters of the Atari and from my conversations with them over the years were really into the Falcon but were forced to abandon further development like so many small companys because of the economic climate and the lure of the much more lucrative PC market .Let me know how you get on as I have the VidiST 12 and somtimes use it although I have now got an Expose Board the VIDI does some things maybe even better than that !

Not quite, the earlier SE's had 800k drives, and so did the earlier Mac II's.
No Mac's have the ability to read PC disks "built in", but they have come with
the Apple PC Exchange utility pre-installed for quite a while.

btw: Apple File Exchange sucks, it only allows you to copy files from PC disks,
Apple PC Exchange is the one that allows you to mount PC (and Apple II ProDOS)
disks directly onto the finder.

I'm just dealing with some problems reading ATARI disks on my MAC, too.

Did I get it right, that 'RED FORMAT' is able to read (or can enable the
MAC to read) ATARI disks also in formats which the MAC with 'PC Exchange'
installed can't read?
If yes, where can I obtain 'RED FORMAT'?
Is it an extension or an application program?

> be the best way to accomplish this? Thanks for any input.

Your best bet is Medium Net or Duet. They can network the two
computers through the MIDI ports. Not fast (31.5 kilobaud), but a lot
quicker than swapping floppies. Either of these programs will allow you to
have desktop icons for the hard disk partitions on the "other" computer.
I have used Medium Net for over a year with no problems. Duet I only
tried once. It worked fine, but once it is run the set-up is fixed.
That is, the hard drive partition (s) specified in the set-up are the
only ones that can be accessed. Medium Net, on the other hand, is an
ACC and allows you to change the selected partitions easily.

Try them both and see which one suits your needs!

1542. Falcon "Extender" Upgrade?

Newsgroup: comp.sys.atari.st
Date: 1995-07-31 00:00:00 UTC
From: jperez@uhunix3.its.Hawaii.Edu
Message-ID: <DCLr5z.81J@news.hawaii.edu>
Source record: 161421

Help,

I heard something briefly about a Falcon upgrade that would
enhance CPU, BUS, DSP, and Math Co-Processor speeds. It may be out of
Germany...

Any information regarding Falcon enhancements of this type would
be much appreciated...

On 23 Jul 95, falcon shot this through the ether to All ...

f> has anyone put a falcon in a tower?
f> if so what size and make of tower?
f> where can i buy this tower?

We build our towers based on a standard PC "Maxi" tower and a custom back plate. A small bit of the tower's inner frame has to be removed for correct placement of the Falcon motherboard. The tower can be purchased anywhere, the problem is the back plate.

I was addressing the 19" monitor for the ST, not the one for the TT.
The TT has the logic for video output on these ECL monitors onboard, the
ST doesn't.

IU> Bummer. :-(

My Connect started to behave again when I re-extracted it from the archive.

Now, this GSZRZ, can you use it as a direct substitute for Z-modem or do
you need to have complimentary software at the other end?

IU> Anyway... if only i could get the screen freezes fixed Grrrrrr.
IU> Doesn't happen with starcall, perhaps i should change... Pity though
IU> cos the user interface on CoNnect is far the better of the two.

What's all this then? You didn't say you had screen freezes last time.

I agree that Connect is the best terminal program around atm. I have had to
ditch trusty old Vanterm because it just didn't get on with Magic which
I've just installed.

I have a Microvitec 1438(?) multisync monitor which does this. It also does
SVGA up to 800x600 (non interlaced) and 1024x768 (interlaced). I bought
this less than a year ago from System Solutions in the UK for about 300ukp.

AFAIK Microvitec is a UK company - so they may not be easy for you to get.

I've heard that some models of IDEK monitors are also suitable - as I'm
sure I was offered one of these as an option when I bought the Microvitec.

:-)

> Atari MegaSTe if a certain plug could be found on the motherboard.
> Is this true? Mine is the 2 Meg model, with 720k floppy.

MSTEs were shipped either with or without an internal SCSI HD. Those that never had one will need some sort of host adaptor. Mine came with an ICD MicroSCSI as the dealer bought in a MSTE1 w/o HD and sold it me as a MSTE4 with 105MB HD. Those that were shipped from Atari with a HD have some sort of Atari host adaptor - which has a SCSI drive attached.

So it really depends on the history of your machine. If a previous owner removed the HD mechanism - then all you chould need to do it fit a new one. Otherwise you will probably need to fit a host adaptor as well.

All AFAIK and IMHO,

Roland.

From: fezzy@iinet.com.au
Message-ID: <3vi6k2$kee@jazz.iinet.com.au>
Source record: 161470

G'day to all, can anyone advise on what graphics card I should purchase for my MSTe (to fit in the VME slot). I was thinking of Crazy Dots but I read the other day (on this newsgroup) that Toad no longer stock them..

Does this mean that even the MSTe is coming to the end of it's productive life ??? Hope not, cos I don't want to quit mine... The only thing I want to change on it is the COLOUR resolutions....I want more colours.!!!

If anyone has info on what to buy please advise WHERE to get it as well as there is little or NO support for Atari in West Australia..

Thanks in advance

P.S. I don't need any help from the New Zealander, Roger Sheephurd....

Executor (the Mac emulator) uses the Chicago font, along with the
Apple Logo... :) their legal status, according to them, is rather good -
they've prided themselves on clean room techniques, for instance.

> 1. You can by it (recommended for your consciousness, but might not be worth
> it if it's just for STonX)

Now, if it worked with Gemulator :) Seriously, how much would
that cost? I wish they put older versions up for ftp (like pre 7.1 MacOS
versions...)

> 2. You can try to dump it to disk from a real ST's ROMs (using the dumptos.ttp
> program from the STonX-0.4/atari subdirectory on our FTP server)

If it can run on an old 520ST with a 720K disk, I should be able
to do that... I was thinking of something like that.

> 4. You can use an older ST's TOS image file, but I need to fix a bug first
> (which makes this impossible)

(as in the 1985 pre-1.0 releases?)

Alas, the ST I have (boxed up practically) is quite old... 1986,
with TOS 1.0something.

Thanks for the info!

My computer recieves data but cannot send. Is it possible to solder a jumper wire from the defective pin to an appropriate trace on the board? The socket itself would be hard to remove and resoldering the outside pins did not seem to help. If someone could tell me where to solder a jumper wire on the board I would be most appreciative. Also which of the pins is the sending one so I can jumper the right pin. Thanks for any help.

: WEB graphically anyway. I was also planning to use GDOS for fancier
: fonts so NVDI would be recommended.

: Sam

Sam,
This is reasonable...however...it would be a kind gesture if you
were to put in a 16 color mode, or a greyscale medium res mode. You could
give it a very large virtual screen that scrolls with the mose...and...or...
put it in a window. This is true what you say...it's not much resolution,
but could come in handy for some ST users who might not have mono, and the
memory to run a decent mono emulator in conjunction with mint, your
application, and larger graphics files.
Using GDOS is also a great idea...NVDI's even better. I'd much
rather be able to use scaleable fonts than megs and megs of bitmaps.
Just kicking around ideas...any way you can do it would be much
appreciated my many of us Atarians. I'm ready to register my copy already!

I don't know about actually putting a SCSI drive _inside_ a Mega, but if
you use ICD's Link or ADSCSI+, you can connect a SCSI drive to the DMA
port. The Link is $90 from Toad, and the ADSCSI+ is $99.

The Blitter socket is special, will not be easy to find in the usual catalogues.
Try systems Solutions inthe UK, they used to sell the Blitter upgrade,
maybe they have a few sockets left, or a souce for them.

Peter,

You can't reliably change the loading order of accessories without using some kind of batch loader or doing it manually (via Geneva or MagiC). Even when you *think* you are controlling the order, you may run into an accessory that is slow to initialize and is therefore leapfrogged by another one.

In general, DAs load in their physical order on disk. Under OldTOS, the list in the Desk menu is backwards -- the last DA in that list was the first to load. But there is so much voodoo in the way OldTOS handles DA loading that the order cannot be reliably predicted.

: But as of to-day Yes I have moved up to a PC clone, so does any one wan't
: my crappy old Ataries...???

: They can't even be given away here....

I'll take 'em! I can do a lot with an ATARI.
I work with 200 486 IBM Value Points everyday and while they are a
suitable machine, my Falcon is a much finer piece of hardware and would
be far more versatile if enough people would get a clue and buy them to
make developpers write for them. Even so, I have evry kind of App for my
Falcon and I lack for nothing but popular Video Games, but that again is
a function of the proliferation of the PC which is a direct result of an
ignorant, computer illiterate, "tell me what to buy" market. One of the
main reasons for the phenomenon of Alternative computers being so much
better yet so much less popular is that the people who are behind the
Atari's and Amiga's of this world are engineers who aren't tainted by
habits of doing things the old way. They simply find the best way to
build their machines, not governed by the bad habits of the past
industry. The draw back is that these people are not business people but
Computer Crafters. Clone companies look at computers as a cash crop, but
real computer makers create works of art.

Yep, i think so too. I have now tried GSZRZ as an ACC, and it has worked
fine, even with the files I got corrupted with the internal z-modem. Dont
know why I changed from GSZRZACC in the first place. Bummer. :-(

Anyway... if only i could get the screen freezes fixed Grrrrrr. Doesn't
happen with starcall, perhaps i should change... Pity though cos the
user interface on CoNnect is far the better of the two.

The easy way to do it is just to symbolic link the files needed from /usr/etc into /etc - i.e. ln --symbolic /usr/etc/slattach /etc/slattach
That way everything can find them wherever they look.

Submitted-by: avg@cwi.nl (Annius Groenink)
Posting-number: Volume 23, Info 3

This article is posted twice a month. It gives a short introduction to comp.binaries.atari.st and describes how to submit binaries to the group.

I am always looking for suggestions on how to improve the usefulness of the newsgroup, and can be contacted at the following internet address:

avg@cwi.nl

Annius Groenink, Moderator.

ABOUT comp.binaries.atari.st

The moderated usenet group comp.binaries.atari.st contains publications or announcements of binary packages for Atari TOS computers. The publications on comp.binaries.atari.st may be freely distributed as long as no modifications are made to the packages. The packages may contain public domain software, shareware or demos of commercial programs.

THIS IS A MODERATED GROUP. YOU CANNOT POST TO IT BY YOURSELF. Read the instructions below for submitting material intended for publication on comp.binaries.atari.st.

SUBMITTING BINARIES FOR PUBLICATION

Items intended for posting or queries and problem notes should be sent to avg@cwi.nl. If you are on a UUCP-only site, you can send them to uunet!cwi.nl!avg. Note that comp.binaries.atari.st is not the correct place to ask general questions or to ask, "Does anyone have software that does X?" Post such requests to comp.sys.atari.st or comp.sys.atari.st.tech.

If you want verification of arrival, say so at the beginning of your submission, or in a cover note. I try to verify that a program works, and if I can't get it to work, I may hold up posting it for a couple of days. Please note that, except in rare cases, software without documentation will not be published. The backlog from receipt to posting varies from one to four weeks depending mostly on the set of submissions currently in my queue.

If you are submitting both sources and binaries, PLEASE send the two separately. If I have to separate your sources from your binaries by hand, your submission will most likely sit on the back burner for a while, or be rejected outright.

Please include a description of your program at the top of your article. Look at old issues of comp.binaries.atari.st for examples of the sorts of descriptions I'm looking for. In general you should indicate what the program does, on what types of Atari TOS computers, whether your program requires a certain amount of on-board memory, a hard disk or a certain screen resolution. If necessary, I may rewrite or add to this information in order to make the postings to the group more uniform. I can't check your submission in all possible configurations, and see what works and what doesn't. Without a description, your submission is likely to be rejected.

If possible, submit your binaries in a Zoo 2.1 archive. I will generally check that everything in the archive is OK and that the files in the archive make sense on an ordinary Atari ST system (i.e. they are MS-DOS style files), unless the archive is specifically intended for use with an alternative file system such as Minixfs. If necessary, I will re-pack the binaries using Zoo 2.1.

If you are submitting a demo of a commercial program, or a shareware program, please keep the amount of advertising to an absolute minimum. If you want to solicit orders, do it in a README file or an About... dialog box, not in a message that comes up every time the user does something. But feel free to post demo versions. Submissions which I feel are of an excessively commercial nature will not be posted.

THE STRUCTURE OF COMP.BINARIES.ATARI.ST ARTICLES

There are two types of articles in comp.binaries.atari.st: "information postings" and "binaries". The binary postings are also called "Issues". The postings of type 'announcement' (history has only known 1) are no more supported, as we now have a group comp.sys.atari.announce for those. The type of a posting can be distinguished by the subject line:

Subject: v06INF1: Introduction to comp.binaries.atari.st

This first word in the title identifies this as the first info posting of volume six. Similarly, the subject line shown below:

Subject: v20i081 (binary): deadwrtr -- Ouija-word processor part01/01

identifies this as the 81st issue in Volume 20, and it's a binary posting. Large programs are broken up into smaller pieces, and have subject lines that look like this:

Subject: v20i041 (binary): pet -- CBM PET emulator part04/39

The "References:" line, if present, points to the previous part of a multi- part program, so that newsreaders (trn, tin, nn, etc.) which can

follow threads will recognize a large program as a single thread.

The first few lines of an article's body are auxiliary headers that look like this:

```
Submitted-by: jackt@atari.com (Jack Tramiel)
Environment: high resolution, tt
Posting-number: Volume 19, Issue 80
Archive-name: rsn
Supersedes: atw: Volume 10, Issue 10-15
```

"Submitted by" is the author of the program. If you have comments about the binaries published in comp.binaries.atari.st this is the person to contact. When possible, this address is in domain form, otherwise it is a UUCP bang path relative to some major (backbone) site. This will usually be the same as the "From:" line in the article's main header.

Certain information about the system configuration required to use the program is given on the Environment: line.

```
Environment: 1meg, medium res, high res
```

This means that the program requires at least one meg of RAM and runs in medium or high resolution. Following is a list of keywords; new ones may be added as needed. They are mostly self-explanatory. Examples:

```
high - runs in high resolution (monochrome)
medium - runs in medium resolution
low - runs in low resolution
1meg - needs 1 meg of RAM
ste - requires an STe
tt - requires a TT
```

The "Posting-number:" line repeats the volume/issue information for the aid of notes sites and automatic archiving programs.

The "Archive-name:" is the "official" name of this program in the archive. Large postings will have names that look like this:

```
Archive-name: desktop/part01
```

The "Supersedes:" header line, if present, indicates that the program replaces an earlier version.

REPORTING AND TRACKING BUGS AND PATCHES TO POSTINGS

Updates to programs are usually announced in comp.sys.atari.st. When large changes are made to a program, the entire thing will be reposted to comp.binaries.atari.st.

To report bugs, contact the person listed in the Submitted-by header. Often there is a contact address in a README file, too. I do not maintain the programs I moderate, so don't send your bug reports to me.

If the program documentation mentions some file that isn't included in the posting (for instance, a font editor's documentation might refer to some sample fonts), contact the submitter, not me. I post articles in their entirety, so if it isn't posted, I probably don't have it.

HOW TO OBTAIN OLD ISSUES

There is currently no officially documented archive for this group.

Message-ID: <DCL0LH.J4A@cwi.nl>
Source record: 161490
Cross-posted to: comp.sources.atari.st,comp.sys.atari.st

Submitted-by: avg@cwi.nl (Annius Groenink)
Posting-number: Volume 8, Info 6

This article is posted twice a month. It gives a short
introduction to comp.sources.atari.st and describes how to submit
sources or digressions to the group.

I am always looking for suggestions on how to improve the usefulness of
the newsgroup, and can be contacted at the following internet address:

avg@cwi.nl

Annius Groenink, Moderator.

ABOUT comp.sources.atari.st

The moderated usenet group comp.sources.atari.st contains publications
or announcements of sources and texts about programming for Atari TOS
computers. The publications on comp.sources.atari.st may be freely
distributed as long as modifications are documented and the original
authors are mentioned.

THIS IS A MODERATED GROUP. YOU CANNOT POST TO IT BY YOURSELF. Read the
instructions below for submitting material intended for publication on
comp.sources.atari.st.

SUBMITTING SOURCES OR DIGRESSIONS FOR PUBLICATION

Items intended for posting or queries and problem notes should be sent
to avg@cwi.nl. If you are on a UUCP-only site, you can send them to
uunet!cwi.nl!avg.

If you want verification of arrival, say so at the beginning of your
submission, or in a cover note. I try to verify that a program works,
and if I can't get it to work, I may hold up posting it for a couple of
days. Please note that, except in rare cases, software without
documentation will not be published. The backlog from receipt to posting
varies from one to four weeks depending mostly on the set of submissions
currently in my queue.

If you are submitting both sources and binaries, PLEASE send the two
separately. If I have to separate your sources from your binaries by
hand, your submission will most likely sit on the back burner for a

while, or be rejected outright.

Sources can be submitted in ASCII form, but for large pacages, a ZOO 2.1 archive encoded using Dumas uuencode is preferred.

Please include a description of your program at the top of your article. Look at old issues of comp.binaries.atari.st for examples of the sorts of descriptions I'm looking for. In general you should indicate what the program does, on what types of Atari TOS computers, whether your program requires a certain amount of on-board memory, a hard disk or a certain screen resolution. If necessary, I may rewrite or add to this information in order to make the postings to the group more uniform. I can't check your submission in all possible configurations, and see what works and what doesn't. Without a description, your submission is likely to be rejected.

THE STRUCTURE OF COMP.SOURCES.ATARI.ST ARTICLES

There are two types of articles in comp.binaries.atari.st: "information postings" and "sources". The source postings are also called "Issues". For a while, 'announcements' were also accepted, but there is now a dedicated group, comp.sys.atari.announce, for that purpose. The type of a posting can be distinguished by the subject line:

Subject: v02INF1: Introduction to comp.sources.atari.st

This first word in the title identifies this as the first info posting of volume two. Similarly, the subject line shown below:

Subject: v06i081: godsrc -- Universe simulator

identifies this as the 81st source article in Volume 6. Large sources are broken up into smaller pieces, and have subject lines that look like this:

Subject: v06i088: decbustr -- VMS clone in ST-LOGO, Part03/08

Certain information about the system configuration required to use the program is given on the keywords line.

Keywords: MWC, Megamax, 1meg, high

This means that the program compiles with Mark Williams or Megamax C, requires at least one meg of RAM and only runs in high resolution. Following is a list of keywords; new ones may be added as needed. They are mostly self- explanatory.

Alcyon - Alcyon C (included with Atari developer's kit)
MWC - Mark Williams C
Megamax - Megamax C
Laser - Laser C
Lattice - Lattice C
C - Any C compiler

OSS - OSS Personal Pascal
BASIC - ST BASIC (this is not a joke!)
uuencode - program is uuencoded (uudecode required to unpack)
arc - program is archived (arc required to unpack)
zoo-high - program is archived (Zoo 2.1 required to unpack)
lharc - program is archived (lharc required to unpack)
high - high resolution
medium - medium resolution
low - low resolution
1meg - needs 1 meg of RAM

The References: line, if present, points to the previous part of a multi-part program, so that newsreaders (trn, nn, etc.) which can follow threads will recognize a large program as a single thread.

The first few lines of an article are auxiliary headers that look like this:

Submitted-by: david@bdt.UUCP (David Beckmeyer)
Posting-number: Volume 6, Issue 80
Archive-name: micro-rtx

The "Submitted by" is the author of the program. If you have comments about the sources published in comp.sources.atari.st this is the person to contact. When possible, this address is in domain form, otherwise it is a UUCP bang path relative to some major (backbone) site.

The second line repeats the volume/issue information for the aide of notes sites and automatic archiving programs.

The Archive-name is the "official" name of this source in the archive. Large postings will have names that look like this:

Archive-name: desktop/part01

REPORTING AND TRACKING BUGS AND PATCHES TO POSTINGS

Most of the time, bugs and updates will be posted to comp.sys.atari.st. Sometimes, "official" updates from the author will be posted submitted to comp.sources.atari.st so that they are archived with the sources.

Since there is no easy way to apply source code patches on the ST, changes to a program often result in a whole new version being posted.

To report bugs, contact the person listed in the Submitted-to header. Often there is a contact address in a README file, too. I do not maintain the sources I moderate, so don't send your bug reports to me.

HOW TO OBTAIN OLD ISSUES

There is currently no officially documented archive for this group.

I agree that C is more flexible when compared to BASIC.

<begin slightly-off-topic waffle>

Some years back, a "scurrilous" copy of Laser C managed to find me. I tried it out, and liked the compiler. I was using a Mega 4 at the time, and compilations were _FAST_ (until one reached 1500+ lines - then it really slowed down)

The environment was good, but, unfortunately, took too many shortcuts. In short, it was a little "flaky". After every fourth or fifth compile, I would experience an "Exception 5" or "Exception 4" (division-by-zero and "illegal instruction" errors), and the machine would hang.

The source-code debugger was great. Unfortunately, it was an extra-cost option, which I believe few took up. The ability to step through C source code, press a few keys and then be looking at 68000 assembly language was great. Another few keystrokes and I could be looking at C source code again. This could happen at any time whilst debugging.

At the time I received it, I was part way through paying for a hard-drive. I kept the compiler and used it whilst I saved the pennies to purchase the compiler from a local retailer.

As a non-ANSI compiler, it was quite good. It was about to be upgraded to ANSI standard when I received my copy.

I fronted up with the cash to purchase it from my local retailer. They didn't have it in stock, but they told me of the soon-to-be ANSI upgrade. I waited for it, but nothing came.

So, I bought Lattice C v5 from Hisoft, and disposed of Laser C (by destroying all traces of Laser C that I had). Compared to Laser, it [Lattice] was a disc-bound behemouth, sluggish and somewhat temperamental until configured correctly.

I currently use Lattice C v5.6 from Hisoft, which, in my opinion, is a much better product than v5. It is still a bit of a mongrel to set up, but is more stable and more productive than the earlier version. It just isn't very friendly when trying to run installed tools under MultiTOS. The linker is a pain as well, because if I have made it resident, the second or third time it is run, it will hang the machine completely under MultiTOS. It's not that I do not have enough RAM - I frequently have between ten and twelve megabytes free when programming under MultiTOS with Memory-Protection 'on'.

(Memo to Hisoft : Some of us run with MultiTOS all day, and require tools which do not hang the computer and require a reboot. Your language products seem to be "MTOS compatible" [runs under MTOS], but not "MTOS friendly" [gets on well with other co-resident, simultaneously running software]. Please fix as part of your "on-going support" for Atari products. I, for one, will gladly pay a reasonable price to upgrade.)

<end of slightly-off-topic waffle>

Recently, I was asked to produce some code for Hisoft BASIC - to colour expand 4-bit (16 colour) graphics to 8-bit (256 colours) and 16-bit True-colour (65536 colours) for the Falcon running a screen expander. At the time, I believed that the images could be quite large, possibly over half-a-megapixel in size, so I coded it in Devpac 3.1 (an assembler).

In order to do so, I needed to know what sort of machine-code Hisoft Basic produced - how parameters were passed, what CPU registers were sacred, how results were to be returned, and so forth.

Looking at it, Hisoft Basic has a faster compiler, but produces worse machine code than most C compilers I have used.

(The manual accompanying Hisoft Basic even has a few errors about how to produce assembly-language modules for it. "Parameters passed in reverse order" means two different things, depending on whether you are coding for Lattice C or Hisoft Basic)

Simple bit-fiddling, computation-intensive or low-level code is very much poorer when produced by Hisoft Basic.

The best results are achieved when using a combination of BASIC, C and/or assembler, using the strengths of each one.

Commented source code can also alleviate the development/debugging time problem.

As can a source-level debugger. Which the version of 'Mon' bundled with Hisoft products definately isn't.

I should qualify that last sentence - Hisoft Basic, Lattice C and Devpac 3.1 allow you to compile with debugging info included in the programs. Unfortunately, Mon [the debugger] will only take note of the first lot of debug info. If your code is at all like mine - spread throughout more than one source file - then you are out of luck. As you step through your program, a "source" window will stay in sync with the "disassembly" window - but only for the one "debuggable" module, everything else is ignored. (Laser C was a lot better in this regard - I once had a 50-module C program to debug, and every one of those 50 modules were debuggable at the C source level. This is not possible in Hisoft language products, as far as I am aware).

I do agree with Hutch about the skill of the programmer being important. A good programmer can make a computer do wonderous things when using the right tools.

1581. Printing problems w/MEGA STe?

Newsgroup: comp.sys.atari.st
Date: 1995-07-31 00:00:00 UTC
From: Scott Wilkinson <scottw@ctv.bell-atl.com>
Message-ID: <3viq30$8oq@banews01.bell-atl.com>
Source record: 161494

I have a Mega STE that I use exclusively for MIDI sequencing with
C-LAB Notator.

I tried to print some music from within Notator (something I last did
a year ago and it worked fine) but every attempt resulted in a system
crash (freeze-up) each time I clicked on "Print."

First, I decided it might be a software problem, so I reloaded the
software from the original disks. Still had the problem.

Second, I thought the Atari might not be communicating with my
HP DeskJet 300. So I tried printing something from Pagestream, and
it worked fine.

Anybody have any clue what might be causing this?

Thanks,
Scott

Look for a copy of 'mtools' for UNIX. It is PD. Using 'mtools', you can
refer to your local floppy drive as a: and read and write MSDOS ( and Atari
[TOS 1.4 upwards]) format disks. e.g. mcopy fred.prg a:

1585. Thing and MTOS

Newsgroup: comp.sys.atari.st
Date: 1995-07-31 00:00:00 UTC
From: "J.D.Coleman" <J.D.Coleman@ncl.ac.uk>
Message-ID: <3visr3$sc6@whitbeck.ncl.ac.uk>
Source record: 161498

Hi,

I'm trying to run Thing as my alternative desktop under MultiTOS. I've copied the Thing files (1 app, 2 prg, 2 rsc) to c:\thing and added 'shell C:\THING\THING.APP` to the end of my gem.cnf. When I reboot I get a dialogue (from the AES?) saying 'TOS Error #--.' then a dialogue from Thing saying 'Can't find icon resource file'. Thing doesn't load and I have to manually load newdesk. If I load Thing from newdesk, it runs fine.

I assume I'm missing something completely obvious. How do I get thing to run under MTOS?

Thanks,

J

> The only thing is, I dont know if its PD or not. It dosnt tell you!

Hmmmm... well, I'd assume that it _is_ PD if and until you learn
differently. Commercial software is normally chockerblock full of
copyright and trademark notices and shareware software certainly
should have a registration notice. Besides, I've never heard of it.
If it includes the address of the author, you could always write
and ask. But if not...

I found that Thing tries to look in your home dir for it's icons.resource and various configuration files. Try moving them there. I had a few problems like this when I first installed it, but after a little fiddling with the location of the configuration files it got fixed. Perhaps, you have them in your home dir, but your home dir is set after the "Shell" command, leaving Thing not knowing where to look.

Hope this helps,
-Mario Becroft (mbecroft@iconz.co.nz)

: Stupid Question: Is the UNIX format the same as MS-DOS?

No. If you happen to work on a HP workstation, there's a set of
DOS filesystem utilities available (the dosif package) to read/write
DOS disks. For other machines as well as HP workstations, there's
'mtools' which serves the same purpose.

Wasinger (jwasinge@slate.Mines.Colorado.EDU) wrote:
:
: I have a question though about the ST's "MMU" and Glue chips. I know
: that the Glue chip decodes the 68k address bus and generates appropriate
: chip select signals. I can add logic on my project board to decode
: a presently unused section of the memory map and generate my own chip
: select signals. So, my first question is: What are safe regions of the
: memory map to use for this???
:
Some of the official address ranges (for an MEGA ST) are:
$00C00000-$00CFFFFF
$00FF0000-$00FF7FFF

There are some other rather small areas within the ST IO area but I don't
know them by heart...
But you can use also other areas which are not used by your machine, e.g.
$00D00000-$00EFFFFF (Attn: TOS 2.x/3.x resides in the $00Exxxxx area)...
Important: The Falcon uses another memory layout!
:
: My other main question is about the Bus or Address Errors that the MMU
: chip (I think that this is correct) generates if it sees an illegal
^- Well, the GLUE generates the bus and address errors...
: memory operation. Is the MMU hardwired to reject any memory I/O to
: addresses which were not part of the original Atari design ??? Or does
: it just signal errors for I/O outside of the 4M limit or word/long I/O
: to odd addresses? If I build decode logic that selects a perip. chip's
: register in an unused portion of the ST memory map will the MMU (or Glue)
: generate a Bus or Address Error? If so, does anyone know of another
: way to add extra memory-mapped I/O chips to the ST h/w?
Bus errors are generated if the processor accesses an address to which no
/DTACK appears around 64 cycles after the access started. But even if you
have less than 4MB of RAM you should not use the RAM area (the first 4MB)
for your purposes since different custom chips behave in a different way
So you may use all areas where you normally get bus errors (important: some
areas of the custom chips are not fully decoded - e.g. when there are 6
byte-wide registers the custom chips (GLUE) may decode full 8 words). But
I think the address range from $00400000-$00DFFFFF should be big enough for
your project :-)
A last thing: You should keep an area of around 256KB free after the first
4MB since the TOS memory scanning routine accesses these addresses when
checking for memory...

- Torsten Lang

Bingo! And conversely, a poor programmer can do horrendous things even
when using the best tools. :)

The programmer makes the choice as to what tools to use; but the user
shouldn't care didly what language was used as long as his needs are met.

From: aw@zaphot.augusta.de
Message-ID: <FHBMDCAIUP@zaphot.augusta.de>
Source record: 161362

Hello folks,

A new version of Thing is available...

Thing 0.59 Beta
The alternate desktop for all Atari's and MagiC!Mac

What's new:

- Many bugfixes ;-)
- 3D buttons in dialog boxes - also for monochrome monitors
- Icons at any size (16*2 up to 128*128 pixels)
- Desktop-icons without text boxes
- Support of Freedom
- Support of extended file attributes of MiNT (rwxrwxrwx)
- More options for the console window (sliders etc. can be turned off)
- More options for programs ('empty' VA_STARTs, running ACCs as
program without confirmation etc.)
- Many non-modal dialog boxes (similar to CoNnect or Freedom)
etc...

The package is, however, available at ftp.augusta.de in
/pub/sys/atari/ -> thin059d.lzh (german) and thin059e.lzh (english).

I called this version 'Beta-Version', as not all features are finished
yet. Copying/moving/deleting files is not possible in background yet.

Ciao...

For sale....

GRAFITTI genlock unit by Titan Designs, suitable for Atari STE.

Allows overlaying of computer graphics onto live video from a camera,
video recorder or other source. Variable fade, transparency, colour and
keying. Comes with software for titling, animating and graphics.

Offers around ï¿½120....

If interested, contact Dr Simon Williams on spesgw@cf.ac.uk

Whoa! settle down buddy, I use the shareware (unregistered to be sure).
In any case, GSZRZACC works fine. What about the screen freezes though?

Hi - in fact you might use a shareware version which behaves like the
registered one - namely no time restriction, etc. So in this case
you are using a cracked version, which is illegal btw. So the best
thing you can do is to register and get a fully operational version
which does not have screen freezes and z-modem problems like the
huge number of registered user do not have this problems.

In fact - this effects are really included by a patch which can be
applied to connect and produces exactly the above effects and some
other even more unuseful. I cannot help it as I did not write this
kind patch program...

Get Gemview, run it on the Mega ST convert the files to GIF and then
youu can read them with PaintShop Pro.

In a previous article, CALLUM.LERWICK@f47.n282.z1.fidonet.org (CALLUM LERWICK) argued:

> Not quite, the earlier SE's had 800k drives, and so did the earlier Mac II's.

Well, if you want to argue about sweat on the gnat's nose...

While the SE's originally came with one or two 800K floppy drives, they
were the first Macs to be offered with 1.44Mb "SuperFloppy" drives, IIRC.

> No Mac's have the ability to read PC disks "built in", but they have come with
> the Apple PC Exchange utility pre-installed for quite a while.

Again, this is true, but for the purposes of this forum, I considered my
simplified "built in" claim to be accurate. You buy the machine, you
take it home, turn it on and it can read/write PC disks with no outward
intervention from the user. That's close enough to "built in" to me. ;-)

> btw: Apple File Exchange sucks [...]

No argument there. It worked, but barely. The newer Apple PC Exchange is
much better, though still somewhat short of Insignia's Access PC, IMHO.

I've never had difficulty getting my Falcon to read PC disks formatted on
the Mac, although that can certainly vary from drive to drive.

Hello Rod,

I'm using NOS on an Atari STe (4megs RAM).

I have tried Oasis 1.12 but find it too buggy. The 'add E-mail'
won't work. Plenty of ???????????? etc. lurking in the background
(on directories, and spotted when changing modes)
The newsgroups, add and unbatch also intermittent faults.

Have these bugs been fixed with the new v1.20 ?

regards

>and I have to manually load newdesk. If I load Thing from newdesk, it
>runs fine.

1) Try this:

setenv THINGDIR=C:\THING

2) If this will not work - maybe you have set HOME.

Unhappily Thing 0.54 tries to load ICONS.RSC etc. from the directory
wich is specified in HOME (e.g. if you are using MiNT-OS etc.).

Get a later version of Thing then - i've just release Thing 0.59
wich handles HOME and THINGDIR in a better way: Setting THINGDIR
will force Thing to use the specified directory always - even
if HOME is set.

It can be found at ftp.augusta.de - /pub/sys/atari/thin059e.lzh

Good Luck!

I have started writing software to connect a PC and an ST together using the
printer ports but I keep getting random inteference. But I can say this
definitely does will work and will be quite fast (10-20KB/second roughly).

It would be possible to write this for the ST-ST link, but I dont know if
anyone has written the software....

1615. Teacher in need of help...

Newsgroup: comp.sys.atari.st
Date: 1995-08-01 00:00:00 UTC
From: hseldon@interaccess.com
Message-ID: <hseldon.21.008810BF@interaccess.com>
Source record: 161378

As a teacher for the Chicago Public Schools, I often feel lucky to receive a box of pens for my classroom (although, that might be changing soon...). However, I received something much larger late last school year--three Atari 1040STs for my classroom.

Only problem with this generous(?) gift was that they had been sitting and collecting dust for three or four years, and students (playing with seemingly dead computers) destroyed all three mice and one of the internal floppy drives.

I have decided to prove many older, more cynical teachers that these computers can be used to help these inner-city kids learn--and that I would go out, on my own, and improve these seemingly-worthless computers.

Before you hit that close button, I am not asking for donations or freebies (although I wouldn't turn any away :->), but for honest help in locating inexpensive parts to fix these babies up and create a computer learning lab in my classroom. (As an aside, all you have to do is see the look in these kids' eyes when they get to play with ANY computer, even a nine-year old, less than state of the art Atari 1040ST--and you'll know how eager they really can be to learn!)

I am looking for the following items at inexpensive prices:

-Three working Atari mice
-One internal Atari 1040ST floppy drive
-A SCSI interface for the Atari (I have donated my older 150mb SCSI hard drive to the cause..I just need a way to connect it.)
-A full-height SCSI case (to contain my donated drive)
-Any kind of device(s) that will allow me to "network" the three computers to one hard drive and/or one printer
-Any educational software
-Additional Atari 520STs with 1mb RAM or 1040STs--either color or monochrome monitors would be fine

I have already purchased an additional 520ST with 1mb of memory to allow me to try out software and so-on at home--however, I will probably move the 520ST to the classroom in September for additional computing power.

Anything you can help me with would be greatly appreciated by myself as well as my students (now and in the future!)!

Please send responses to me via email...

Thanks in advance,

David

1616. Rodger Sheppard: THE TRUTH:known reoffender

Newsgroup: comp.sys.atari.st
Date: 1995-08-01 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <3vmdm2$5ad@status.gen.nz>
Source record: 161379
Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy

I am president of the largest Atari Club in New Zealand and am in a
position to tell those disgusted or intrigued or defendable, the following:

Rodger Sheppard is well known in Atari circles in this country for his
bad mouthing tactics, both on the net, on BBS here and general demenour
amongst those computer interested. It is also on record that he has tried
his verbal attitude on other computer platforms.

He is definitely not respected in New Zealand for his activities.

To those that think he has a right to state his opinions on the net,
think again. His mistake is that he has for a long time now abused his
priviledge and annoyed many people. He has destroyed his own credibility,
which is a great pity, since he has a wealth of experience.
The fact is, that he can have his say, everyone agrees with that, the
Atari groups have even been designed with this purpose in mind. It could
even be said that people are not using the facility enough, although I
understand that not all people get (or want?) to subscribe to *advocacy*.

The problem of course is that Rodger Sheppard is reknown for his impetuosity.
A welcome change perhaps, but a transgression in the long run.

We in New Zealand are completely, and absolutely sick and tired of Mr
Rodger Sheppard and the more people that take up the suggestion of Dan
and email his provider to complain, the better.

Thankyou.

As i already stated in another posting - Thing 0.59 and later will
handle HOME and THINGDIR better:

It will use HOME to load thing.inf, 0xxx.inf and colorxxx.inf ONLY.
It will use THINGDIR for ALL files, if set - even HOME will be ignored.

>I don't think this is documented well enough in the manual.

Sorry ;-)

>I also had big problems because I put Thing on a case-sensitive
>partition, where 'THING.RSC' is a different file from 'thing.rsc'.
>Thing will only load files in uppercase.

Get Thing 0.59! This version uses lower-case-filenames! :)

Ciao...

There is no reason why you can't* write a GEM based WWW browser, its just that
its not worth the trouble to write TCP/IP sockets for standard TOS, you'd need
at least MiNT and MiNTnet resident.

Excuse me? This description exactly fits that of the PDS in low-cost Macs.

Why are people surprise with the double reboot (is this the correct term?) of
MagiC booter program? This is the same procedure for loading a disk loaded Tos
over the ROM Tos.

Hi Bill
Oasis is quite popular. It replaces the Demon NOS package for offline
stuff only at the moment. Phil Yeadon plans to write a replacement for
the online portion also.
Have a look at his posting yesterday (31/07) and you will see that
v1.20 is due to be released very soon. I have been beta testing for
him on my 4m 1040 ste but it runs quite nicely on a 1m as well.

>get a dialogue (from the AES?) saying 'TOS Error #--.' then a dialogue
>from Thing saying 'Can't find icon resource file'. Thing doesn't load

I run Thing with MTOS, and it works fine. But I had similar problems
with Thing not finding its resource and inf files. Do you have a
HOME environment variable? If Thing finds one, it loads all its files
from there. Thing will also use THINGDIR if it finds it.

I don't think this is documented well enough in the manual.

I also had big problems because I put Thing on a case-sensitive
partition, where 'THING.RSC' is a different file from 'thing.rsc'.
Thing will only load files in uppercase.

: Might be worth opening the casing. There is a liitle lead with a miniatur plug
: that runs from the battery compartment into the computer. Maybe that little
: plug is dirty and could be cleaned with a little switch cleaner. It's a
: possibility.

Another idea: I had the trouble with some special TOS versions which do
not initialize the RTC correctly. So when the batteries are empty or some
other prog "shot" the clock it may be necessary to initilize it "by hand".
I used TOS 2.06 (as a relocated loadable file) temporary to reinitialize
the RTC...

: MS-DOS from my hard drive anymore... I get a "Non System Disk" message.
: MS-DOS will still recognize the drive if I boot from a floppy. Thus I
: suspect that somehow optimizing the drive partition has removed the IBM
: information from the boot sector. So my question is: Is there a way I
: can restore the boot sector or write a new one without formatting the
: entire partition?

I think you have some trouble now :-(*Never* reorganize a DOS boot partition with non DOS-aware software. DOS expects some system files (IBMDOS.COM, IBMBIO.COM or some other names depending on your DOS version) at fixed places on your harddisk. So when your organizer moves around these files DOS won't boot. The "clean" way is to copy all your data to another partition and reformat the DOS partition from DOS. Then copy back all files except the system files of course. Your emulator should now boot again...

>
> At 31.5Kbaud it would take 5 minutes 26 seconds to transfer a meg. Floppies
> would be MUCH quicker than this...

Well, I suggest you try it. First of all, when you do it with
floppies, you have to transfer the data twice. The average data transfer
rate to floppy on the ST is about 10-12K a second. Since you have to
do it twice the effective data transfer rate is only about twice as
fast as the MIDI network. Secondly, you have to physically transport the
disk which may not be very time consuming, but is extremely inconvenient.
Also, since most ST's only have 720K floppies, you won't be able to put a
full meg on a disk and will have to do this in multiple steps. (Hmmm,
this could get complicated if the one meg of data is a single file and
won't fit on the floppy!)

Most importantly, the MIDI connection let's me walk away when I
want do this. So, it actually only takes a few seconds of MY time and I
can use the other 5 minutes plus to do something more productive (or more
relaxing!) :)

> > have desktop icons for the hard disk partitions on the "other" computer.
>
> Now that's an advantage, not having to write your own software. But if you
> know what you're doing it's easy.

It may be easy (I'm not a programmer so I don't know), but I
looked for a MIDI networking utility like Medium Net for over 5 years
before I finally found one that worked reliably! It's been a tremendous
time saver!

By the way, I have measured the overall effective transfer rates
with Medium Net and they average about 2.5K/second. So it would actually
take about 6 minutes and 40 seconds to transfer a full meg, but since I
don't have to wait for it and the computer works cheap, who cares! :)

Now this would be even better than MIDI networking for those of
use who have Atari laser printers and unoccupied printer ports! I
thought one of the reasons this had not been done before was that the ST
printer port was not fully bidirectional. I'd be very interested in your
progress on this software and would be glad to beta test it for you.

Unfortunately I do not have 2 ST's and so cannot develop the software easily. If I can borrow an ST sometime I will endevour to do exactly this software.

The printer port is not a problem, it is easy to select the input/output status of the port by setting a single bit.

If anyone else is interested in this program drop me an e-mail and I'll see wheather it's worth me getting stuck into writing it.

Thanks,

There is a very nice shareware text editor named Everest, It's up to
version 3.3 with very active support. It should do what you want, and
it's available at most Atari FTP sites.

Yes, the official Hypertext markup language is ASCII. But I think what Dennis means if there is a ST-Guide hypertext to ASCII converter (excuse me if I am wrong :)).. Nope, not that I know of. You'll have to have the original file. After it is compiled there's no way back.

>Isn't HTML already ASCII?

For the most part, it is, but if you're just trying to read the content of a page written in HTML, it can be hard to read with the tags still in place. Also, there are some HTML'isms like < for < and > for > which could be converted to ASCII.

Um, unfortunately, I don't know the answer to the original poster's question. But, if there were such a program I knew of for any platform, it would likely be portable to the ST. For example, I think it wouldn't be hard to write such a thing in Perl and Perl is available for the ST.

I have recently noticed an increase in the "For Sale" posts in the comp.sys.atari newsgroup.

Perhaps a .forsale newsgroup dedicated to wanted-to-buy or the sale of atari stuff could be created. (If such a group exists, I apologise - my net host does not carry it).

(There is a misc.computers.forsale [or something similar] newsgroup, but it seems to get _very_ little usage Atari-wise).

OK, here's another Web page for you all to check out. It's been around since April, but it never got much publicity back then, so I am giving it a plug now. It is the Yolo Atari Club's home page, and has a ton of *well organized* links to other pages. It also has the beginnings of an attempt to update the International TOS Software Catalog. YAC would be very keen on any assistance the i-net community could give us in making this a valuable and much used resource.

http://dcn.davis.ca.us/~dmlarson/yac/

We hope to update these pages frequently.

> The Amiga is back into production, A4000 towers and A1200's
> are pumping off the assembly lines as fast as Amiga Technologies
> (a wholy owned subsidiary of Escom GmBh) can make them. The Atari
> is dead.

I was talking with a guy a couple of weeks back and the conversation
got onto computer graphics. He said he owned an Amiga and I was waiting
for the endless drone of how great Amigas are.... it didnt happen!

He said the price of the Amiga, a new 68040-68060 chip, and a video
toaster was about 6000 pounds. Then he compared a similar spec PC
for about 1500 pounds... The Amiga has lost it's neiche! :>

Also, have you seen the price of the new A1200? 400 pounds? FOR A
BASE MODEL?!??! It's worse than the price of a Falcon!

> I remember all the Atarians laughing at the Amiga when CBM
> (DESERVEDLY!) went belly up. How does it feel?

Great, the Amiga has no niche left, no software which hasnt already
been ported to the PC and it's well and truely DEAD.

The Falcon and ST still have the niche MIDI market and have 3rd
party manugacturers for both ST (Medusa?) and Falcon.

Face it, AMIGA is a dead machine and is now as useful as a dead
herring...

> Of course, the Amiga will never gain popular acceptance, its
> heyday is long gone. Heck, I was an Amigoid from 1985 to 1993

> and a FUTURE. Ill always have a spot in my heart for the Amiga.
> It was the best the computer industry had to offer for a long time.

Admittedly the Amiga was a VERY good machine for a long time, now
it's time it died gracefully rather than hacking and spitting trying
to regain sales... It wont happen...

This is all true, the Amiga is no more...

> Try them both and see which one suits your needs!

As I'm looking to try and "network" my classroom STs, this whole concept seems
extremely interesting to me. However, being an ST novice, I have a couple
questions...

1. Will this setup (Medium Net or whatever) allow me to "network" more than
two STs? (Seeing as I have four now..)

2. Will this allow me to hook up the (or more) STs so that I may use one hard
drive (and/or printer) with all of them? With the hard drive, can they all
access the same partitions of the drive? (So I could, for example, have four
students load up the same ST-Writer software for their respective computers.)

3. What does a system like Medium Net cost?

Thanks again,

David

1670. Re: Infocom Games

Newsgroup: comp.sys.atari.st
Date: 1995-08-02 00:00:00 UTC
From: Paul.Moss@adlib.centron.com
Message-ID: <3067313b@adlib.centron.com>
Source record: 161333

Greetings!

You recently said:

Jt> I am hoping some fellow Atarian can help me. Back in 1986 I bought 2
Jt> Infocom games - AMFV and HHGG. Recently I came across those 2
Jt> packages and decided to play them again. They had been stored away
for
Jt> about 5 years. But the ST can no longer read the diskettes. I have
Jt> tried reading the disks in several different systems but nothing
works.
Jt> I am hoping that someone can help me recover these 2 games. I still
Jt> have the original packaging and diskettes, so I just need replacement
Jt> disks. Even copies of the files would be fine.

Now I'm responding to this in echomail 'cos I think all you folks should
know!

I recently bought *both* the Infocom collections for the IBM PC...
to run on my Atari... As my Atari can read the disks, accessing the *data*
files (ie story.dat) is not a problem.

Now listen up - until *very* recently (Zork 0 and Return to Zork, which
had
graphics) *all* infocom adventures were written in ZIL (Zork Interpretive
Language) - which saved costs as once they had written *one* ZIL
interpreter
for a platform (atari, mac, IBM) they could then release the *entire* set
of
adventures.

What this means is - if you have *any* working interpreter (the .prg) then
you
can run any adventure. The best interpreters are version 3 and up - I have
one
version 5 interpreter on my atari... and there are at least *two*
shareware or
public domain interpreters available...

The reason that I purchased the two collections (lost treasures of infocom
vols
1 and 2) - besides gaining another couple of titles (I already have most
of the
originals) was that the box set contains maps and hints for all of the
contents
which might prove to be very useful! :-) no extras - such as scratch

cards/LGOP
or peril sensitive sunglasses and fluff/HHGTTG but certainly worth it!

Best of luck whichever path you choose.

P.

... You are in a maze of twisted little messages, all alike!

I was just wondering if anyone out there could help me?

Although not an atari user myself, a friend of mine has one as part of a midi setup. Recently he's been having trouble with little cartoon pictures of bombs appearing in lines on his screen.

Is this phenomenon a virus or some nice way of the system telling you to start saving your pocket money?

Any help would be appreciated.

Thanks,
.\\ark

I'm looking for the source to MSA, or docs describing the MSA
format.
Also many years ago, someone told me there was a hacked version
of ACOPY which could create a diskfile image of any disk, even
protected disks.
(The reason I want this info, is to write convertors for use with
STonX - the Atari ST emulator for Unix)

I would like to make the following user statement concerning Rainbow
Multimedia II. Rainbow is a very creditable program. It=92s performance
cannot be compared to any other Photo/Paint Studio available for the
Falcon. The speed at which it performs image processing is simply amazing
considering the platform it is running on. Its friendly user interface
and multiple workstations have found a permanent home on my hard disk.
I haven=92t seen DA=92s Picture , but I do own DA=92s Vector. Atarians using
Calamus may find the GUI familiar, but for the rest of us, it remains
complicated. Speaking German would be of great help too for this
program. TruePaint and TrueImage do not even compare to Rainbow II.
Apex is another great program, mabey better than RainbowII, but what one
lacks, the other definitely excels at. The copy protection (look up a
word in the manual) is annoying,but only has to be performed if the

Falcon is switched off (it survives reset). I=92m sure this
can be defeated by some lowly hacker, further diminishing the Falcon
software market. I have only briefly looked at the animation and
recording studios, but they appear to be as majestic as its other studios
(and as easily accessible).
I can=92t image what it takes to code a program like RainbowII or Apex
Media, but both are definitely worth their asking price. If Apex Media is
an STF 98%, then RainBow II is at least 90%, IMHO. :)
Now all we have to wait for is a DSP/Falcon specific rendering program.
Doug? Mandus?

Just my two cents

Mike :)

The order the entries appear in the Desk menu is dependant on how fast
each DA registers its name, and how many other AES calls (causing
context switches) each DA calls beforehand.

From: dwiza@pinn.net
Message-ID: <3vmua0$fcd@everest.pinn.net>
Source record: 161391

The Amiga is back into production, A4000 towers and A1200's
are pumping off the assembly lines as fast as Amiga Technologies
(a wholy owned subsidiary of Escom GmBh) can make them. The Atari
is dead.

I remember all the Atarians laughing at the Amiga when CBM
(DESERVEDLY!) went belly up. How does it feel?

Of course, the Amiga will never gain popular acceptance, its
heyday is long gone. Heck, I was an Amigoid from 1985 to 1993
but have since switched to 486 class machines. But for the Amiga
faithfull, there will be more new machines, more product development,
and a FUTURE. Ill always have a spot in my heart for the Amiga.
It was the best the computer industry had to offer for a long time.

Gravity. Its not just a good idea. ITS THE LAW.

I'm looking for an HTML editor for the ST... or perhaps suggestions for a text editor program that allows you to have multiple documents open at the same time for cut & pasting.

From what I know, I think some of the more advanced word processors(a la AtariWorks) can do this... but is there something a little smaller?

Peace.

Hello,

I'm experiencing some problems with my Atari, and since this is the n-th time, I don't feel like taking it to a repair shop again (lst two times, the ppl claimed I had 'bad contacts due to oxydation', although the simplicity of the problem was not refelcted in the costs). What I need is some decent diagnostic software that can help me find out what's wrong, so I can repair it myself (don't worry, I know something about computers).

DUET can use the MIDI ports, serial ports, or the LAN ports on
the TT/Mega STe. I have never tried the LAN ports and heard one
unconfirmed report that it only works properly on the TT LAN ports.

1692. FOR SALE: hardware/misc

Newsgroup: comp.sys.atari.st

I need space for new hardware! And $$$'s to upgrade exhisting
hardware! So the unneeded equipment has to go! Not to mention,
I could use the room..... It's getting crowded in here!

FOR SALE!!!!

1040STF (asking $250)
720K Internal Drive
TOS 1.4 ("Rainbow Tos")
2.5mb RAM (Upgradeable to 4mb)
TWEETY BOARD
Z-Keys
IBM (Internal) keyboard hardware
IBM (External) Keyboard
Original Box
Power Cable
No manual
Good condition
Note1: This computer has the nicest, CLEANEST, upgrades that I have ever
seen. And I have seen many :)
NOTE2: It still has the regular keyboard. Both the IBM keyboard
(that comes with it) and the standard Atari keyboard are still
useable. No heavy modifications have been made to make this work.
The IBM keyboard plugs into the back, to it's own special connector.
What I'm getting at is, if you don't like/want to use the IBM
external keyboard, your not stuck with it!

520ST (asking $50)
Stock from the factory
Power Supply
Original box
Good Condition
No manual

GTS-100 External Floppy Drive (asking $75)
Double sides drive
Power Supply
Nice black case
Good condition
LED Display
Note1: These types of drives work exellently!!

2400 baud Modem (asking $30)
Cardinal is the brand
New Condition
Original Box

Manual
Power Supply

Trackball (asking $15)
"TripleTrack" by Craft
Original Box
New Condition
Useable with left or right handed people
Has "drag" button or "rapid fire" button

Computer Table (Asking $75)
In good shape from what I have seen. has a partial 'hutch' with it also.
I would be using it, except I don't have enough room!

Joysticks (Make offer)
SOme misc joysticks. May throw these in with the 1040 if they have not
been boughten by the time the 1040 has been. Otherwise, make me an offer
on them!

Yup - though its a 16 pin package.

Totally standard - and worth about 50 cents.

Can't tell you what its there for - or why it might be missing - but its
going to cost you very little to fit another one.

:-)

1697. NEW Atari Announced

Newsgroup: comp.sys.atari.st
Date: 1995-08-03 00:00:00 UTC
From: maberg@xs4all.nl
Message-ID: <3vqp2n$31f@news.xs4all.nl>
Source record: 161259

I Just received the new "Atari ST Nieuws", a dutch magazine, and it has
an article about the forthcoming Atari "MicroBox". This, according to
the article, is Atari's newest *computer* that was designed in the last
few years. It was kept very, very secret.
Alas, As we all know, the time between letting the public know it's
there and it *actually* being available, is in (good?) Atari tradition
a long time. And it doesn't figure that atari comes out with a new
computer when they already stopped production on the Falcon. Or does it ?

In any case the specs are *fantastic*, let's hope this is not
vaporware...
Luckily for us Atari is very slow in delivering the things they promised
but AFAIK they *never* announced vaporware.
(they always kept their promises, apart from terrible delays)
So I believe this machine *is* going to be reality. If it is not too late
by then, is another story really.

Take a look at this:

CPU: 68060 @ 50 MHz
8 MB (max 128) RAM
Video: TOM, 64-bit RISC, 2 MB DRAM, 27 MIPS (from Jaguar)
DSP: Jerry, 64-bit RISC (from Jaguar)
Audio: 12-channel digital 16 bit
Quad-speed CD-Rom
1 GB Harddisk
OS: TOS 5.0 (full multitasking)
Case: Towercase designed by Apple craftsmen
Optional: MPEG hardware decoder
Optional: 486DX2-66
Connections include but are not limited to:
- SCSI, Parallel, Serial, Audio, Video.

The Magazine-publisher is Atari-distributor for the Netherlands, so I
guess this article does have a bit more to it than just a rumour.
All specs are taken from the article and reprinted without mistakes.
(or permission ;-))

I just wonder what you all have to say about this.

Harrumph...

Ok, I admit I am curious. There are obviously some abuse addicts here.
Gotta get their daily fix. I am clearly missing out on a big buzz here,
no good, gotta have some. Where can I get find some good abuse to fling
around? or has this newsgroup cornered the world supply? Where can I find some
really good clever dick lines to insult someone with? How do I become
truly dependant upon insulting other people? How can I too become an addict
of abuse? Do I snort it. Do I inject it? Do I rub on all over and become
immersed in the warm glow of being a complete pain in the backside?

This is not for me guys. Alas I am to be denied the orgasmic pleasure of
abusing my fellow atarians when I should be enjoying their electronic
company and benefitting from their knowledge and experience. Serves them
right for having knowledge and experience right?

What a bummer.

Tell you what guys... take your abuse and administer it like an enema.

Then bugger off. I am out of here to find more congenial and mature company.

Thanks for fucking up my enjoyment of the net.

In message <c35_9507280106@flight.org> CALLUM LERWICK wrote:

> Where can I find good* standard MIDI files? Classical stuff, folk songs, etc...

This one's probably worth posting in case there's anybody else wanting
it ...

ftp.cs.ruu.nl is an excellent place to start looking for all things MIDI-
related, including songs, and also docs, progs etc. The site is wholly or
partially mirrored at

ftp.cis.nctu.edu.tw /MIDI/SONGS/
ftp.pu-toyama.ac.jp /pub/ftpmail/ftp.cs.ruu.nl/pub/MIDI/SONGS
ftp.monash.edu.au /pub/midi/SONGS
ftp.funet.fi /pub/sounds/midi
ftp.ibp.fr /pub/midi

A large collection of midifiles can be found on wuarchive.wustl.edu,
in /systems/ibmpc/ultrasound/sound/midi/files. Some of these files
are specific for the Gravis Ultrasound card but most are also usable
for other synthesizers.

ftp.und.ac.za contains midifiles and programs for the Sound Canvas and
MT-32 in directory: /pub/pc/midi/.

It may seem a silly question but ... do you mean SMFs or GM files. There
is a significant difference - SMF is well-defined portable file format,
while GM is a definition of a standard for patch number-voice relations
(so patch 0x00 is always an acoustic grand piano, patch 0x40 is always a
soprano sax and patch 0x7f is always a gunshot), which also specifies a
minimal set of controllers which must be implemented.

Hope this helps.

I would be *amazed* if this was true.
I think it's more likely someone thought of an ideal machine they would
like Atari to produce and the "rumour" has gone on from there.

I'm not saying this is not true, just extremely unlikely! :)
It sounds like a really good machine (a bit too good if you ask me...)

I don't know off hand. Check with your local dealer to find the pinouts and see which line is the output and input lines. Referencing them with the ground MAY give you enough information, but the data coming out is usually too fast for a multimeter to check out. Best to use a scope to ascertain whether data is being output.

I live in Canada, and I am interested in registering Rainbow for the falcon, and I was wondering who I should approach, and what the cost would be in Canadian dollars (U.S. is okay, I can convert between the two).

Dave

How dare you compare me to a software pirate you fucking
scumbag.

I am interested in keeping the atari alive. and that involves
getting new software, be it commercial or shareware. if there
is no new software, i believe that sharing of older, unavailable
pieces of software is a good idea if our beloved ataris are
to survive.

i can understand how people consider 'piracy is piracy' and that
no matter what it is a mortal sin. if that is how you feel
then DONT DO IT.

who are you to be so high and mighty and judgemental as
to what is published on our newsgroup. i will tell you
what is unacceptable in the newsgroup : ignorant idiots
who shout down people who speak their mind.

the internet is about freedom of expression. the atari newgroup
is about people who like atari machines sharing a common interest.
to that end, your hostility is misplaced...

this is not a thread... i understand your views on piracy, but that
is no longer the issue.

Don't put a 74LS11 IC in if it isn't there already.
There is no need for it: If you have a 2-Rom TOS set it *must* be there.
If you have a 6-Rom TOS it should *not* be there.
That's all there is to it.

has anyone ever used a 19" monitor on a falcon?
is there any 19" that support both color and mono?
please let me know..

does a Moniterm work on a falcon?
can the falcon be modified to make it work?

how about the atari tt194 (i think this is the model number of this)
anyone know how much they go for and if they will work?

thank you

1717. CLASS 1 SHAREWARE FAX ??

Newsgroup: comp.sys.atari.st
Date: 1995-08-03 00:00:00 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <08031995.233601@empyr.dircon.co.uk>
Source record: 161279

Hi,

Anyone know of a shareware fax program that will send CLASS 1 faxes ???

I have downloaded a ton (well, ok, a couple) but they only support class 2
:-(...

My little 'ole Dowty Quantum can only handle class 1 faxes.

I don't want any extras, just a basic program that will send a fax.

Cheers,

Kev.

On 01 Aug 95, John Perez shot this through the ether to All ...

JP> I heard something briefly about a Falcon upgrade that would
JP> enhance CPU, BUS, DSP, and Math Co-Processor speeds. It may be out of
JP> Germany...

You're probably thinking of the Speed Res Card from Hard & Soft in Germany. It can accelerate the CPU up to 40 MHz but is somewhat unreliable at that speed. The best bet is to keep it to 36MHz. Some software doesn't get along with it.

There is also an 040 based card called Afterburner which has just been released in Germany. It uses a 68EC040 (or should that be LC?) at 66MHz and has room for 64MB of on board RAM in the form of either standard or 72-pin TT FastRAM. Haven't seen any reviews of the finished product as yet. It's now produced by GE Soft.

Another one to llok our for is a new accelerator from the makers of the BlowUp screen enhancer. They're developing an 030 accelerator which will run at 40MHz (dependably), has room for 16MB of TT Fast or standard SIMM's, built-in screen enhancer AND it will accept the original Atari Falcon RAM card (4MB, I'm not sure about the 1MB card) which is used as video RAM. Preliminary pricing puts it at around the $200 mark.

ATB,
Tom

JE> last Atari I heard of was the ST.

You may be surprised to hear that MANY people are still getting great satisfaction from this same machine. I have had an early STM since year dot and it can still do everything I need.

Yes, I have added RAM, hard discs, modem, decent printer and a tape streamer but all at a lower cost than a major machine swap AND much of my original s/w is still used.

While there is not a lot of competition amongst commercial s/w suppliers there are adequate and very good products. The shareware scene is vibrant with many talented programmers making applications available.

Communal spirit as expressed in this, and other, echoes is (usually!) positive, informed and helpful.

You could do a lot worse than get a 2.5Mb STe or, if you have the cash and want extensive sound and graphics, a Falcon.

Roger

>AtariWorks) can do this... but is there something a little smaller?

Yes: Everest. You can open up to 10 windows at the same time and
it needs only 240kB on my machine.

Another nice feature: Everest allows you to define shortcuts for
keywords often used (e.g. you type 'be', press [Esc] and it will be
completed to '\begin document' ... as an example for TeX-writing ;-),
but you can define all HTML-keywords as well).

Look at ftp.cs.tu-berlin.de ... AFAIK you can get it there.

Ciao...

Do you have an /etc/resolv.conf file? I think the format is like:

domain domain.level
nameserver xx.xx.xx.xx

where the xx is the *IP* address(es) of your nameservers

:
: And it's been so nice the past few days without the abuse <sigh>

Thanks for the support and I that find is quite easy to agree with.

It is nice though having it in advocacy, instead of fouling up the other groups where it doesn't belong!
Mr Shepherd is keen to slang off abou the Atari - then this is where he can have a ball, all encouragement to him! Also he and anyone else that wants to participate needs to see that this can be a contentious area...

He said he couldn't give the machines away, well that is not a problem Mr Shepherd. I know people in Wellington who would get a lot of enjoyment from taking them off your hands.

Then you said make me an offer. Again, no problem, Mr Shepherd, I have offered you the resource of our magazine advertising and country wide circulation to help find someone to buy your *amazing collection*.

You know, I am very keen to help you. the Atari fraternity here are a friendly bunch, if you are lonely, we'll even send you a bunch of flowers. we can even understand why you want to slang off about the Atari computer. We've seen people exhibiting your *Burnout* behaviour before. They generally move on, often very abusively, but find merrier climes. And it sounds like you have just found yours.

I just had to correct your idea that the Atari scene is dead here in New Zealand.

It is alive and kicking. We even have people with Power Macs and PCs in our club. They wouldn't be in the club, paying fees if they had no Atari machine. So it takes all sorts doesn't it Mr Shepherd!

And sure I emailed you to give you the opportunity to rest your gear. Like some people I know, they have long since moved on, but they still keep their Atari stuff. I guess there is some nostalgia in you too!

cheers Rodger - and - *(keep it in advocacy)*

I resoldered one side thinking it might be a bad connection but it did
not work. I can't get to the other side without sucking out all the
solder and removing the connector. I don't know about the STf but the STE
is rather crowded by the rs232 port.

Yes you to can own a pocket calculator. :] :]

>There are no Macs with 16 bit colour. And you "forget" to
> mention that most Macs have 15 bit colour only, iincluding such cheap
> machines as the AWS 95.

Ok, I'd like to know where you get this information. Right now, I can switch
from 8 bit 256 color mode to 16 bit 65535 color mode. Let's see if it works....
[Moments later]
Yep. I'm typing this in glorious 16 bit color. :] :]

Oh, and if you care to check *Designing Cards and Drivers for the Macintosh
Family 3rd edition*, you'll notice that direct video devices are defined as
having 16 or 24 bits per pixel (not 15). In fact, I can find no documentation
that says anything about 15 bits. So where are you getting this information?
It's sure not the same place the video hardware designers are getting it! :]

Machines as wimpy as the LC can do 16 bit colors stock (or was it the LCII,
I can never remember).

> >What about the flagship Falcon?
>
> What about the Classic?

What about it? They don't make 'em anymore. I think the lowest machine that's
still in production is the 68040 based Performa 603. Even that will fade into
the past when the new low end 603's appear. And what does this have to do
with the Falcon anyway?

I think it's stupid that people continually feel the need argue about the ST.
I used to own an ST and a Mega STe. In fact, I was using ATARI's since the days
of the 400. However, I fail to see how spreading dis-information about Macs is
supposed to make people feel good.

15 bit color? That's dumber than a football bat! ^_^

I missed the start of this, so I don't know what the actual problem is,
but I can guess that you are having Tx/Rx problems on the RS232 port.

The 6850 ACIA chip is fairly safe, it has buffers (1488/1489's) to protect
it from transients,etc, so a Tx/Rx failure could be due to one of these
being defective.

If you set up a terminal program to transfer a file out the port, you can
see the voltages changing on the pins (especially if you set the baud rate
to
< 300 baud. Receiving a file should cause the voltages on the receiver
pins to toggle. A small amount of knowledge about RS232 ports is all you
need to confirm what the problem actually is.

I actually had my STFM for years before I found the RS232 port could not
transmit. This was due to a dead +/- 12 volt power supply to the driver
chip.

Edith Professional is a good choice of text editor. It comes with its own
set of HTML kurzels making the placing of HTML into documents a really simple
task. Demos of Edith should be available from FTP sites or contact Annius
at avg@cwi.nl or zfc@zfc.nl for details on the full version.

Hope this helps.

1742. Video animations with DA Vektor Pro...

Newsgroup: comp.sys.atari.st
Date: 1995-08-04 00:00:00 UTC
From: "Dr Simon G.K. Williams" <williamssg@cf.ac.uk>
Message-ID: <DCs7sJ.ovp@cf.ac.uk>
Source record: 161203

Those of you who have used DA's vektor pro, will know that there is a useful facility of being to automatically load a series of ascending numerically filenamed fill patterns, these can then be incorporated into animations, with the fill pattern type changing between frames.
The fill patterns have to be in the form of uncompressed TIC files, a variation on the TIF format.
Now using the PD utility AVI player 0.95, available from most ftp atari sites, it is possible to step through an AVI video sequence (obtained from a PC CD ROM for example) frame at a time. It is also possible to save the current frame to disk, as an ESM file.
I set about saving out 5 seconds worth of video (approx 125 frames) by laboriously stepping through each frame and saving it as an ESM file, numbered 1.esm, 2.esm and so on. Then, using GEMView I converted the batch of ESM files into TIF files, and finally laboriously loaded each one into DA COnvert program and saved them as TIC files! Phew!
Why did I do all this you might ask? Well, I proceeded to load them into DA Vektor Pro (easy bit - automatically) and then create a simple animation of a few circles and boxes flying round the screen, 125 frames or so long. I then filled these shapes with the fill pattern incrementing for each frame. The result, a video clip within each object! After compiling the movie, I played it back in the movie player, WOW! The speed is incredible, smooth 25 fps video being animated at the same time!
(I should point out that this was done on a TT with 16MB fastram and a matrix graphics card, but similar results would be possible using a falcon I'm sure).

Well, the results were very impressive and once the separate TIC frames are on the harddisk, many different animations can be created quickly. The problem is it takes so long to prepare these frames. What is needed is a small utility that can take an AVI file, request how many frames to be saved out (say every 1,2,5 frames) and automatically save a sequence of picture files to harddisk, numbered incrementing. Ideally they would be saved as TIC files, ready to go straight into DA's vektor, but if a suitable save module for GEMVIEW could be added to batch convert into TIC files, then any format would do. Finally, has anyone used the microdeal videomaster system? it's a realtime video digitiser and sound sampler for the atari's and dead impressive! The only thing is that it doesnt save AVI files, but its own VID or FLM files. Now, how about supporting these as well?
Wish I could program, as I would develop these utils. Maybe there's some keen programmers out there who could offer some light on this project?

THanks for taking the time to read this message...

Magic can only multitask programs, that are written in a way that
allows things like that. That means a program using no windows - like
uniterm - certainly can NEVER run under any multitasking system. Get connect
instead, for example.

As far as I know, you have an optin in tempus to tell the program
how many memory it may take and you have another option in Magic telling Magic
how many memory to give to a specific program.

1744. Atari Transputer Workstation -- any info?

Newsgroup: comp.sys.atari.st
Date: 1995-08-04 00:00:00 UTC
From: jlothian@castle.ed.ac.uk
Message-ID: <DCsK0y.CIo@festival.ed.ac.uk>
Source record: 161205
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.transputer,alt.folklore.computers

Hi. I'm trying to get some information about an Atari
Transputer Workstation, model ATW800. It seems to date
from about 1990. It's in a large tower-style case.
On a cursory examination, it seems to contain most
of the innards of an ST, along with a large board
with a T800 transputer on it and another board that
seems to be a video card of some sort. All I've got
is the box and the keyboard; no monitor, no mouse,
no manuals. I'm told that it runs Helios.

Basically, I'm looking for any information about this
machine; in particular, I'd be very grateful for
pointers to any companies that might still be able
to supply documentation for the machine and its
software.

Thanks in advance,
James

: > ST? I've looked but haven't found on.
: Do you mean formatted or unformatted ASCII? (Do you want to see the indents,
: paragraphs, bullets etc.?)

UDO will do this. UDO will be available at HENSA soon, and will also
be supported in the UK by me. What UDO does:

Currently
Converts between:
Its own format (U)
ST-Guide
Latex
ASCII
RTF
Pure C help

Next version (of which I have the Beta) includes HTML too, and in the
future it will be able to do Windows Help too.

The later version should be available by the end of the month.

Hi Mike,

mg> I would like to make the following user statement concerning Rainbow
mg> Multimedia II. Rainbow is a very creditable program. It?s performance
mg> cannot be compared to any other Photo/Paint Studio available for the
mg> Falcon. The speed at which it performs image processing is simply amazing
mg> considering the platform it is running on. Its friendly user interface
mg> and multiple workstations have found a permanent home on my hard disk.
Thanks, I'm glad you like it.

mg> I can?t image what it takes to code a program like RainbowII or Apex
mg> Media, but both are definitely worth their asking price.
It takes A LOT of hard work, and I'm sure Douglas Little and the other
guys at BSS agree.

mg> If Apex Media is
mg> an STF 98%, then RainBow II is at least 90%, IMHO. :)
As a matter of fact, AFAIK, Apex got 93% in ST Format and
Rainbow II got 96%...
Anyway, I don't think you can compare the two, as they are completely
different packages.

Best Regards, Mandus Soderberg

The MegaVision300 is nice, if you can read German. The only problem I've found is that (at least with an external hard drive) you must turn on your computer a second or two before turning on your hard drive.

IMO, this are the specs of the Falcon040, with the 060 just having
replaced the 040. While I do think, that such a machine exists in the
laboratories, Ihighly doubt that that protype will ever go into
production (just think about the cost of the 68060 only).

The dsp can't actually handle analogue signals, just digital. You need
something to convert between analogue and digital signals and that's were
the AD/DA-converters come in. If you examine some texts about the Falcon you
will find that it is built this way.

> mention that most Macs have 15 bit colour only

Well, yes and no. While most modern Macs with at least 1Mb VRAM supports
the "Thousands of Colors" setting, the actual maximum number of colors
one can simultaneously display is ~32,000 (2^15) not ~65,000 (2^16).
That's because that last bit is reserved for use as an "alpha channel,"
IIRC, which could be used as the transparency bit, for example.

It's true that no desktop Mac can display true 24 bit color (2^24 =
~16.8 million colors) but only because we don't have any monitors with
that many individual pixels! :)

>> >What about the flagship Falcon?

> What about the Classic?

Apples and oranges, mate. The Falcon is the latest and greatest Atari
Corp computer. The Classic is far from Apple's top dog and only came
back (for awhile) due to user demand, nostalgia, or other dementia. :)

Don't waste your time arguing with Peter. Like someone else we know,
he only frequents this newsgroup to stir up trouble. :)

Date: 1995-08-04 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <3vtj5c$r2c@usenet.INS.CWRU.Edu>
Source record: 161217

I just bought a used 1040 that has a Spectre 128 cartridge (MAC)
attached. The software that came along with it is version 1.9f.
Small, Inc. (who made the cartridge appears to be out of business.
In the readme file with the software, it talks about a version
2.0. Was it ever released? Anybody know where it may still be
gotten? Or what happened to Dave and the Spectre?
I would appreciate any information. Please e-mail
to Prof. B. D. Cahan, CWRU

bdc2@po.cwru.edu

Thanx

I did not know this. So you're right. When was this anyway ?
And, what have synthesizers got to do with computers ?

Maybe they realised they needed a better machine than the falcon.
In any case the falcon was a good opportunity for them to learn about
harddisk recording, digital audio, DSP's. That gives hope for the future.

>RUNS under single TOS!

Yes, because even the CLI it provides is a subprocess of the kernel. The
OS doesn't/can't interfere so KA9Q doesn't get suspended for long periods of
time. How could a single TOS/GEM application deal with an incoming NNTP
connection (or indeed any incoming connection) if the file selector has been
called, or the mouse is in the menu bar?

>: by then, is another story really.

>A lot will also depend on the price.

I heard about the same price for a basic system (4 MB RAM, no HD, but
with CD-ROM drive) as a comparable MAC or clone.

>: CPU: 68060 @ 50 MHz
>: 8 MB (max 128) RAM
>: Video: TOM, 64-bit RISC, 2 MB DRAM, 27 MIPS (from Jaguar)
>: DSP: Jerry, 64-bit RISC (from Jaguar)
>: Audio: 12-channel digital 16 bit

>Isn't Jerry in the Jaguar used for sound? I wonder why there should
>be two soundchips.
there is one DSP (Jerry) and a soundsubsystem (DMA<>RAM, A/D & D/A
converters) just like the falcon has.

>: Case: Towercase designed by Apple craftsmen

>"Apple craftsmen"... sounds fishy to me...
Sorry, "craftsmen" were *my* words. The magazine writes : "The new Atari computer comes in a, by Apple designers designed, modern minitower-case with a golden Atari MicroBox-logo and a red power-switch."
(in Deutsch: 'entwurfen' dachte ich.) This sentence hopefully shows why I preferred the "craftsmen".

>: Optional: MPEG hardware decoder
>: Optional: 486DX2-66

>Now, this sounds a lot like Atari 8-)! You can have virtually
>*anything* as an option as long as you have only one processor
>bus slot. You just wait long enough until a third-party company
>comes up with a solution...

I thought there was an MPEG card for the Jag. If this is so, it must be the same one... Saves money. Not everyone needs it so it figures to keep it an option at additional cost. I myself would not buy *anything* with an Intel inside, even if it is a dishwasher ;->

>So I remain skeptical, but I'd love to be proven wrong here.

Well, it ain't *that* impossible, think about it:

1) Ge-soft and Medusa have 68060 systems available or nearly ready.

2) Atari kept the Falcon 030 a secret too during the design-stage.
And the ST-book. And the...

3) All announced atari hardware *did* hit the market, think about the ATW 800, TT 030, Falcon 030, Jaguar, ST-Book, CD-Rom, Portfolio...
The *only* exeption is the TT/X wich was not a new machine but a TT in a new case. It was cancelled due to economic, not technical, reasons.

4) The main hardware is already there, no additional cost in designing custom-IC's. (Jerry from Jaguar, Tom from Jaguar)

5) The towercase with (apple?) look really exists: the magazine has a photo of it printed in the article. (and it is *not* a cheap pc-tower with a paintjob done...;-))

6) Tos 5.0 should be finished by then, I heard there exists a 4.93 version or so somewhere. Better still, Atari should licence MagiC for "normal" users who don't want no hassle, and sell Mint OS for users who want a full Un*x-like OS. The best of both worlds to choose from.

7) Atari *did* make some money selling the Jaguar, and from the licence of the jag technology to a PC-card developer (name escapes me now, wasn't it insignia or sigma or something like that?).
And didn't Atari say that they competely focused on the Jag just to make some cash and thus be able to come back with a new computer ?
That was exactly what they gave as a reason for retiring from the computermarket IIRC.

Let's all just hope for a miracle... This platform really deserves it.

>production (just think about the cost of the 68060 only).

Wait just a minute. First, a 68030 is fitted in the falcon, *not* a 040.
This 68030 @ 16 MHz does 4 MIPS IIRC. The 68060 @ 50 Mhz does about
75 (!) MIPS (source: MC680x0-FAQ: 68060 @ 66 MHz: 100 MIPS). That's
almost 5 times as fast as the Falcon DSP, and 19 times what the CPU can.
Second: how dare you compare the sad VGA videochip in the falcon with a
64-bit RISC processor? It's at _least_ 2 generations difference between
the two. (remember the Jaguar is, to this date, the *fastest* game
machine in the world...)

I'm not sure what a 68060 would cost, let alone if you buy 20.000 at once.
Maybe Herrn F. Aschwanden can comment on this...?

Yes, and I have seen the price tags of the Escom Amigas. Very "cheap", a
400oT for the price of a Pentium. Just the Pentium happens to have twice
the RAM, a 1 gig HDD and a 2 meg graphics board.

I have seen and used ATARI software that IIRC uses the printer port to
transfer data to and from the ST Book (as the BOOK does not have have a D
drive). It uses a modified cable but the instructions were supplied.
From memory it was called ST_TRANS.PRG, the more I think of it the more
I'm sure it's uses the centronics port.

Hope this helps, regards Fezzy

You are deluding yourself, I'm afraid. Atari has a history of announcing and even formally showing hardware and software products that never made it to dealer's shelves. Several 8-bit machines, their CD-ROM player, and the Developer's CD come immedidately to mind. Other folks can add their favorite "the check is in the mail" Atari product.

> I just wonder what you all have to say about this.

The 68060 is quite an expensive little chip since it is not mass produced in quantity like the 040 is. And TOS 5.0 was never finished, AFAIK. The MPEG hardware decoder and 486DX2-66 options sound like wishful thinking. And this is supposed to come from Atari Corp (not a 3rd party outfit)? Sunnyvale has never before been able to keep a secret about a soon to be released (or announced) product. Why should this be any different?

Specs look good, but let's just say I'll believe it when I see it. ;-)

1771. Re: Mint-Net How to?

Newsgroup: comp.sys.atari.st
Date: 1995-08-04 00:00:00 UTC
From: azog@gti.gti.net
Message-ID: <3vuo10$6ni@gti.gti.net>
Source record: 161232

STIRRE31@MAINE.MAINE.EDU wrote:
: Are there any fairly decent documents out there that explain how
: to set-up Mint-Net? I tried (unsuccessfully) to set it up last
: year. This year I plan to buy a good modem (14.4K) and get a
: Slip account at my University. However, I am leary to buy a
: modem and then not be able to find software that works for
: me. Any help would be greatly appreciated.

MiNTnet is rather easy to set up, but IMHO it's all the stuff in
the distribution package that confuses people: all the source, and
many differnet directories.

I put together a quick how-to, but it's short, and given the possibilites,
not cookbook. There are other peices of software to get, and it's not
obvious.

In short, all you do is copy the sockdev.xdd into the /mint or /multitos
directory. Copy either slip.xif or ppp.xif, depending on your interface,
into this directory as well. Copy any files in the tools/ distribution
directory into /etc, and you're set!

The gotcha's are that, this gives you a great TCP/IP stack, but what
do you do with it? Familiarity with Unix helps, since all MiNT stuff
seems to try to match Unix's structure.

So now you need a dialler, either dip (which can be used for both
SLIP and PPP connections; this is what I use), or pppd for PPP connections.
Writing the dialling scripts for dip isn't that easy or obivous. I can
send a copy of my azog.dip, which is a static SLIP account.

After the dialler, you need net stuff! lynx, telnet, ncftp, any of which
could have their own seperate documentation.

: P.S. With all of the requests for easy-to-use Slip software
: here it would seem like it would a be a profitable venture.
: Perhaps we could all write letters to a developer like Compo
: asking for something like Trumpet Winsock? Just a thought....

GEMSOCK! I think someone discussed something similar to this sometime
back, but all the nay-says give the impression that It Can't Be Done.
Which is bullocks, if you ask me. Unfortunately, I am not a programmer.
Having a Winsock type of setup would preclude the need for MiNT and MiNTnet
and would allow a nice GEM browser...

If anyone is interested in any of my homegrown documentation of any
MiNT, MiNTnet, etc stuff, let me know, and I will put it on my home
page. Again, I am not a programmer, would classify myself as an admin

type. (admin on Unix for approx 6 years and VMS TCP/IP for 5 years, as well as running Linux and BSD on various architechures...)

I am looking for one or two people to beta test a midi sample dump program I am writing. At the moment I need people with Falcons, TT's and more exotic systems (colour preferably). It would help if you have collections of .wav or aiff/aiffc sample files on disc. This is a very early version which does not yet perform sample dumps. I also need feedback very quickly!

If interested, please email me with a description of your system.

Thanks,

Richard.

1778. FS: 16MB TT-Ram, video card, more

Newsgroup: comp.sys.atari.st
Date: 1995-08-04 00:00:00 UTC
From: jeffmay@magnus.acs.ohio-state.edu
Message-ID: <3vs3o9$fle@charm.magnus.acs.ohio-state.edu>
Source record: 161291

I have the following items for sale. Some prices are negotiable.

16-MB Atari TT-RAM board $500

Crazy Dots 15 VME board $150
includes NVDI ET-4000
(German version)
resolutions up to 1664 x 1200
in monochrome to 16 colors
1280 x 800 in 256 colors
800 x 600 in 32768 colors

Lattice C 5.60 $50
includes all manuals and
"Modern Atari System Software"
book

The Atari Compendium $20

Diamond Back 3 $20

Diamond Edge $20

I also have a monitor I may be selling. It's a 20" Mitsubishi Diamond Scan. It has horizontal scan rates from 15.7 - 38kHz, so can display any of the standard Atari screen modes, including ST low. If anyone is interested, let me know.

What gives ? The 6850 has *nothing* to do with the serial port, although
it is conceived for serial transmission. The 6850's only do the keyboard
and midi interfaces.
The serial port is handled by the MFP 68901 thru the 1488/1489 pair.

>> Is it possible to test values across pins with my handy multimeter to
>> find out if the chips you mention are defective?
Depends on what you know about electronics. It is also *very* easy to
shorten two pins with cheap measuring equipment. Better stay clear if you
don't know what you're doing.

>> I resoldered one side thinking it might be a bad connection but it did
>> not work. I can't get to the other side without sucking out all the
>> solder and removing the connector. I don't know about the STf but the STE

Wrong. Already commented couple of lines earlier.

>If you set up a terminal program to transfer a file out the port, you can
>see the voltages changing on the pins (especially if you set the baud rate
>to
>< 300 baud. Receiving a file should cause the voltages on the receiver

I would do it like this : connect pins 2-3 with a loopback connector, send
a file and check with a logic probe where signal disappears. A multimeter
should *not* be considered useful, the cheaper (=normal) ones can't go
beyond about 200 Hz.

>I actually had my STFM for years before I found the RS232 port could not

Very likely indeed that this is the problem.

Anyone need a good Spectre GCR Mac Emulator?
3.0 software and drive cable. Manual included.

1781. looking for an 1 meg st with a small hard drive

Newsgroup: comp.sys.atari.st
Date: 1995-08-04 00:00:00 UTC
From: eretic@tiac.net
Message-ID: <3vsicp$jkr@sundog.tiac.net>
Source record: 161294

I need an Atari ST (any model, 1 meg a must) with a 20 meg or better hard drive. No monitor needed, but would be nice, I have a mouse, and VideoKey left from when I got rid of my ST setup. I'd like to get another one, just for the sole purpose of driving my DVT backup cart. I found a VCR that will work perfect with the cart, and I've got a batch file I wrote on my PC to zip up entire driectories, then split the large file into 512K chunks, perfect for the DVT software, then null modem to the ST.

I have no other way to drive the cart, than with an Atari. And I've looked all over for a viable (cheap) archiving solution. My Colorodo 250 drive takes $20 tapes for 120 megs of data. I can store 360 meg on a $2 videocassette if everything works out. The bottleneck in the whole thing is the null modem connection of 19200 (I don't like sneakernet to move data - floppies -)

Can someone out there part with such a system for say $100? (1 meg ST, <> 20 meg drive).

Thanks.

Eric

Agreed, but if he does not have a logic probe or an oscilliscope, then a DVM or
multimeter will give some indication. If the pins don't toggle when they
should, even a cheap multimeter will show this.

maberg (maberg@xs4all.nl) wrote:
: I Just received the new "Atari ST Nieuws", a dutch magazine, and it has
: an article about the forthcoming Atari "MicroBox". This, according to
: the article, is Atari's newest *computer* that was designed in the last
: few years. It was kept very, very secret.

: Luckily for us Atari is very slow in delivering the things they promised
: *but* AFAIK they *never* announced vaporware.
: (they always kept their promises, apart from terrible delays)

Yeah, but in this case they didn't promise anything. It's just an
article in some magazine, and since the publisher is also an Atari
distributor, they will be interested in everything which helps
Atari customers to stick with the company, including rumors of
any kind. OTOH, it might have some truth to it. In the early days
of the Jaguar, we kept hearing about some mythical combination
of Atari's computer technology and their Jaguar chips, so Atari
could have built some prototypes. The "MicroBox" might be one of
those prototypes.

: So I believe this machine *is* going to be reality. If it is not too late
: by then, is another story really.

A lot will also depend on the price.

: CPU: 68060 @ 50 MHz
: 8 MB (max 128) RAM
: Video: TOM, 64-bit RISC, 2 MB DRAM, 27 MIPS (from Jaguar)
: DSP: Jerry, 64-bit RISC (from Jaguar)
: Audio: 12-channel digital 16 bit

Isn't Jerry in the Jaguar used for sound? I wonder why there should
be two soundchips.

: Case: Towercase designed by Apple craftsmen

"Apple craftsmen"... sounds fishy to me...

: Optional: MPEG hardware decoder
: Optional: 486DX2-66

Now, this sounds a lot like Atari 8-)! You can have virtually
anything as an option as long as you have only one processor
bus slot. You just wait long enough until a third-party company
comes up with a solution...

So I remain skeptical, but I'd love to be proven wrong here.

> pictures of bombs appearing in lines on his screen.

> Is this phenomenon a virus or some nice way of the system telling you to
> start saving your pocket money?

> Any help would be appreciated.

The bombs are the usual way for the Atari to say goodbye -- like GPF
on a pc, guru numbers on an Amiga, etc.. The number of bombs may be
significant.

If your friend has been installing new software, especially gizmos
in the form of AUTO programs or .ACCs, then the reason could be
a conflict between different bits of software. Could also be a
virus, but normally these cause more "interesting" results than
just bombing.

If the machine is old and/or has been knocked about a bit -- not
unusual for musicians :) -- then it could be a hardware problem.
Often this means nothing more than a chip having worked loose from
its socket, so the repair needn't be expensive.

Eliminate the first possibility by neutralising all AUTO programs
and accessories, and see if the problem goes away. If no joy then
we'll start to worry about the hardware.

HTH

Chris

It would be better if you refrained from posting this sort of
thing in this newsgroup, since you obviously don't read other postings
here, and aren't aware of what is going on in the Atari world.
Most people should be aware that Atari sold manufacturing rights
for the Falcon to C-Lab. The Falcon has been improved, and is being
manufactured in the original facility, in the same case, etc... Toad
computers (at least) will be selling the C-Lab Falcon in the US.

--- This excerpt appears in Atari Explorer On-Line 0405

=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
//// C-Lab Falcons Through Toad
=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

When it became clear that Atari would no longer manufacture the
Falcon030, we were all glad to hear that C-LAB of Germany had licensed
the design and would be producing their own machines.

C-LAB then revamped the Falcon, cleaned up its audio circuitry and
added an internal SCSI bus to produce the 14MB C-LAB Falcon MK-II.
While the machine was aimed squarely at the digital audio recording
market, it seemed too expensive for most hobbyists and came in only
one configuration.

C-LAB has since revived the FALCON MK-I, and Toad Computers is
importing them, in addition to new designs of the FALCON MK-II, at
prices identical to our previous pricing! Without further ado, let us
summarize the new Falcon pricing schedule:

FALCON MK I: Original Falcon w/Audio & CPU Mods for Cubase Audio
==
4MB, No Hard Disk $ 999.00
14MB, No Hard Disk $1,499.00
4MB, 170MB Hard Disk $1,299.00
14MB, 170MB Hard Disk $1,899.00

FALCON MK II: Enhanced Super-Falcon w/Internal SCSI 514MB HD
==

4MB, 514MB Hard Disk $1,899.00
14MB, 514MB Hard Disk $2,799.00

Monitor Adapters
================
ST Monitor Adapter $ 14.95
VGA Monitor Adapter $ 14.95

The C-LAB Falcon (both MK-I and MK-II) has undergone many design
enhancements but is still compatible with all hardware and software
upgrades available for standard Atari Falcon computers.

C-LAB FALCON FAST FACTS:

* Imported to the U.S. By Toad Computers
* Available by 8/1/95
* Same case as Atari Falcon030
* Other Hard Disk Sizes Available, Please Ask
* Bundles w/Cubase Audio Available
* Pricing subject to change due to currency exchange rates
Pricing valid through 8/31/95
* All plugs & ports identical to Atari Falcon030
* Accepting Orders as of 7/14/95

For more information on the C-LAB Falcon or any product we sell,
please call Toad Computers at (410) 544-6943.

Whoah, nice try, have you counted them that fast? the 16th bit is dropped
and irrelevant for video output. My sources are several issues of "ST
Computer" (who advocate Mac/MagiCMac), excerpts from the MacFAQ from
Mausnet, etc.. Of course - as Mac users still think 17" is a screen
resolution - they will believe anything the Mac tells them it does.

>Machines as wimpy as the LC can do 16 bit colors stock (or was it the LCII,
>I can never remember).

The MacUp 3/95 lists them, but the data given is unusable, as they only
give the maximum "resolution" at the maximum colour depth.

Yes, the German MacFAQ in Mausnet is then - by definition - dumber than a
football bat?

I will get it and post it here.

I had an STf which developed a bad habit--it would load and run, but when
I tried to save to disk, it would shred the FAT, rendering the disk useless.
The repairman mentioned having a diagnostics cartridge which would fit in--
you guessed it--the cartridge port. I never saw the thing, and by the way,
he and two other repair people failed to fix the problem. The machine was
finally written off as having an intermittent crack in the motherboard.
however, I was intrigued by the idea of the diagnostic cartridge.

From: George Pongas <pongas>
Message-ID: <3vuch4$df0@usenet.INS.CWRU.Edu>
Source record: 161165

I recently got hold of a 1040ST with a mono monitor and a 20MB hard drive.
I remember a friend of mine used to own one, and he had demonstrated a
software-only Mac emulator. I have tried to find one, but I guess it is
not shareware/PD, since I didn't find it on any FTP sites.

If somebody has the software, please suggest a way for me to get it.
Replies/suggestions via personal e-mail please (better than to hunt for
your answer in a newsgroup...)

: thanks.merci

Yeah, there was a product called DVT Hard Drive Backup that did exactly
this. I remember seeing ads for it way back, maybe five years ago, in
STart magazine and other places. You could try calling STeve's or Toad
and seeing if they have it. I know San Jose Computers used to carry it,
but I don't know their number by heart. STeve is 800-487-7753, and Toad
is 800-448-8623. Or try your fellow Canadian Computer Direct at
800-547-9203. I am not affiliated with any of the above mentioned
companies and only mention them as companies I have dealt with
successfully in the past.

Aha, that explains it. I didn't realize you were talking about an
imaginary computer that never made it ;-). I suppose it's the same
machine indeed, but with a few modifications to keep it up to date.

Besides, I followed the entire thread resulting from your "open letter"
to John Townsend but have missed that letter starting it. Could you send
it to me via private Email please ? I would be much obliged...

>Well, even if- today's RISc CPUS are not only cheaper, but by far more

>whereone could replace the 68060 by a RISC chip, when (if?) TOS or Magic
>is available in Native form for a RISC CPU.

That is true, but it doesn't automatically make the 68060 a *bad* chip.
It does compare good to a Pentium, that should be enough for now (?).
The 68060 is (internally) almost a true RISC processor BTW !
Apple did not choose for the PPC for speed reasons (the 68060 _is_ just as
fast as emulated code on a PPC 604) but because the PPC processors have
a better future than the 680x0 series (there will never be a 68070).
But the RISC processors _are_ better, no argument about that though...
Still I think most of us _would_ have a Medusa T60 (and be *very* happy
with it, too) instead of our ST's if only the Medusa's price was $1500.

According to the comp.sys.68k FAQ : (talking about MC68060 processor):

"It has a list price of $US 308 probably at quantity. (unverified)"
Although "unverified", this should be considered a fair estimate...

>On the other hand, why should Atari publish a new machine, when they
>actually
>1) closed down all activities in continental Europe, especially in
>Germany, where they culd sell most of them
>2) cancelled all treaties with Atari dealers. How are they going to
>distribute the machines?
>3) I willnot talk about the marketing here, alll whathas to be said, has
>been said in the past

That could prove to be _very_ difficult indeed. But when the falcon was
introduced, the dealernet (at least in europe) got bigger again, after a
real bad period. Same goes for the software-developers, especially the
shareware-programmers. The same could happen when a new revolutionary
computer is marketed. (marketed...? by Atari...? Naaahh ! >;->)
You never know.
But every week that goes by makes it more and more improbable...

>BTW, In Austria we had the official introduction of the SONY playstation,
>announced even on TV and on Teletext (Videotext IMO it's called in some
>countries).
>Still no Jaguar around.

Well that's very stupid from Atari and very unfortunate too...
However it only shows Atari's bad economic insights (as reason 1), and the
fact that SONY is such a _huge_ multinational with so many resources and
power that the _only_ company with the power to win from SONY is probably
Microstuffed (as reason 2).
I mean, _if_ Atari's marketing would be any good, would they _then_ be
able to take on giants as SONY with any chance of succes ? I think not.

Which brings me to another point:
If the entire worldwide community (and the US-government, IBM, Apple, etc.)
does not stand up soon to Microstuffed and Bill (his first name says it all,
doesn't it ;-)) G*tes, and their increasingly agressive marketing-politics,
no computer company, bar none, will have _any_ chance of releasing _any_
future new 'different' computers at all. I myself am very happy paying much
more for a computer, if I thus prevent to get microstuffed-dependent.
Providing it does what I need of it, that is. And if it's harder for me to
turn it off than it is to turn it on that's just fine by me ;-)

Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st,comp.sys.atari.st.tech,demon.ip.support.atari

I recently posted a request for people to translate the OASIS manual
into variuos languages.

The response has been very good, I have so far had offers of translation
into the following languages:-

German
Finnish
Swedish
Dutch
Spanish

I would still iike to add French and Itallian to the list. If anyone is
interested please feel free to get in touch.

Please be warned, I cannot make anyone rich for performing this task,
but as we intend to write a NOS replacement and a Web Browser which would be
shareware, free versions of these programs would of course be sent to the
translators.

Come on people, do your bit to keep the Atari scene alive, the more
people who have access to Atari software the longer we all get to use these damn
fine computers.

Thank you in advance to anyone who feels up to the task.

```
B > Wouldn't it be great if someone found a way to put a Falcon in
B > a Stacy case? Anyone know of a way to suggest such a thing to
B > C-Labs? I hear they are the only company still producing the
B > Falcon. Such a computer in a portable format would be quite
B > useful!

When you think of it, a C-Lab Falcon Mk II with its internal
hard drive would be pretty portable to begin with! Combine that with
a flat LCD monitor that could attach to its monitor port...come to
think of it, does anybody make a VGA/SVGA stand-alone flat monitor?

TAF has something close to that when we have our meetings - we
utilize a special monitor tablet along with an overhead projector
with the club Falcon - makes it pretty cool and the audience can see
what's going on in software demos. Sure beats having 30 people
crouching over a single PS3000 monitor like we'd done in the past :).

In article: <400av2INN9th@brain.cis.ohio-state.edu> scruggs@cis.ohio-state.edu (kevin eugene
scruggs) writes:

> You are completely full of it, you have absolutely no idea what
> you are talking about.
>

As you dont seem to be grasping what I'm saying, here it is again:

Amiga has Lightwave 3D which is VERY good so they used an Amiga setup
To get the quality in image display they use a Video Toaster
Lightwave is available on the PC
PC is quicker than Amiga (even with 68'60 and accelerator)
PC SVGA cards give as good results as a toaster
PC is cheaper than an accelerated Amiga
They use a PC

And my comment about any machine with a graphics card being able to
render the images; it's perfectly true. An ST could render the images
and display them with a suitable card, admittedly it would be
unbeleiveably slow and unusable, but possible!

Sooo... What do you think is bullshit about this?

I want to thank all of you for the wealth of information regarding the rs232 port. I was a little hesitant to do more than resolder the connections. I had disconnected the computer and taken it to a friend to hook up to his scope. Before we tore it down we ran it again from his house. Everything seemed to work fine which was puzzling. To make a long story short we tracked the problem down to some fast routines that loaded in at bootup. After disabling the offending programs I was able to send and recieve. The odd thing was that I had been using the same set up for some time with no problem so it was the last thing I suspected. I did take your advice though and was going to use the scope rather than a multimeter and risk shorting out something. Thanks again for all your help.

: >replaced the 040. While I do think, that such a machine exists in the
: >laboratories, Ihighly doubt that that protype will ever go into
: >production (just think about the cost of the 68060 only).

: Wait just a minute. First, a 68030 is fitted in the falcon, *not* a 040.
: This 68030 @ 16 MHz does 4 MIPS IIRC. The 68060 @ 50 Mhz does about
: 75 (!) MIPS (source: MC680x0-FAQ: 68060 @ 66 MHz: 100 MIPS). That's
: almost 5 times as fast as the Falcon DSP, and 19 times what the CPU can.
: Second: how dare you compare the sad VGA videochip in the falcon with a
: 64-bit RISC processor? It's at _least_ 2 generations difference between
: the two. (remember the Jaguar is, to this date, the *fastest* game
: machine in the world...)

Well, if you reread I talked about the Falcon040, not the Falcon030. Some
time ago, when I wrote the "open letter" to John Townsend, I had a talk
by e mail with a former Atari technician who worked at the Texas
facility. He told me he had worked on the Flacon040, a machine with
Jaguar chips, Audio subssystem with DSP (exactly the same specs as you
are stating, however, he did not mention the "Jerry" DSP, he just stated
"..with DSP"), "full speed 68040" CPU and 8 new custom chips, of which
some were clocked at 110 MHz. The facility was closed, none of the
techinicians stayed with Atari then from the Texas facility. The machine
should have been ready by 1993.

: I'm not sure what a 68060 would cost, let alone if you buy 20.000 at once.
: Maybe Herrn F. Aschwanden can comment on this...?

Well, even if- today's RISc CPUS are not only cheaper, but by far more
powerful than 680x0 chips. The PPC 604 can emulate, for example, a 68040
FASTER than the original chip. Other CPUs are even faster (Alpha AXP); to
include the 68060 is a solution if and only if MicroBox has a COU slot,
whereone could replace the 68060 by a RISC chip, when (if?) TOS or Magic
is available in Native form for a RISC CPU.

On the other hand, why should Atari publish a new machine, when they
actually
1) closed down all activities in continental Europe, especially in

Germany, where they culd sell most of them
2) cancelled all treaties with Atari dealers. How are they going to distribute the machines?
3) I willnot talk about the marketing here, alll whathas to be said, has been said in the past

BTW, In Austria we had the official introduction of the SONY playstation, announced even on TV and on Teletext (Videotext IMO it's called in some countries).
Still no Jaguar around.
Some specailised shops, which had the Jaguar, cancelled them 2 to 3 months ago due to little demand.
The 2 years lead for Atari in game console technology is just vapor over here.

Regards,

Alfred

If you use Event_Multi to detect all system actions (Mouse, Windows etc)
and include a timer event, GEM will drop out after a period of time, allowing
the TCP/IP data packets to be handled. The only item that presents dificulty is
the Menus.

The Panther is the only exception to my knowledge... They seem to be OK at releasing stuff, they just never advertise or support the bloody things!! If they were just a bit bigger Atari could do well... Perhaps if the Jag makes a bit of money from the VR kit.... Who knows?

> 4) The main hardware is already there, no additional cost in designing

> with a paintjob done...;-))

What happened to the Falcon available in Tower form? Nothing, they stuck it in an ST box and sprayed it a funny colour. Never trust Atari specs 'till the goods are on the table.

Look at the Falcon, the specs said 16.7M colours and a PC co-pro slot. They axed both.... Wait for finalised specs!! :>

No, this is (most probably) not a virus. It's the Ataris polite way of
saying that it can't cope with the program it's running. Does this happen
all the time no matter what program your friend is running, or could you
track it down to a certain program/accessory/autofolderprogram/disk/...?
The number of bombs that it is throwing may also give a clue to what kind
of trouble it's about.

I have a "large" Atari TT-030 system that I haven't turned on for
a number of months (I'm basically converting over to Linux).
It still has some sentimental value for me, but if somebody offers
enough it's for sale...

Some details:
Atari TT-030 computer system
newer motherboard; 32mhz cpu, fpu chip, 1.4 meg floppy
"Catamaran" 48-mhz cpu upgrade installed and working
4meg ST memory
4meg TT memory
512meg internal SCSI hard disk (made by IBM)
German video card installed in VME bus slot; gives 800x600
resolution on 14 inch SVGA monitor; bigger resolutions
on more specialized monitors
double speed CD-ROM drive

2 Atari specific CD-ROM's

a 60meg (DC600?) SCSI tape drive that works (at least) with
the public domain Atari tape driver software

a large quantity of Atari developer documentation, development
software, text-processing software, utility software

(and depending on the offer, possibly a 14" .28dpi NI SVGA monitor)

$1000 ???

CHRS: IBMPC 2
I've got a slight problem I need some assistance with.

I'm now trying to install Thing 0.59e to work with my printer on my system.
The printer is a LaserJet (I), and will only work on the serial port at
2400
baud.

Thing seemed to need a program to do the printing so I downloaded and
installed GEM Spooler 3.3 (uk).

All seems to work well enough if I install the modem.cpx to run at 2400
baud,
but even when setting GS to only print one copy I get a minimum of three
copies!!

Anyone got any solutions to using GS, or can they suggest another program.
Ideally I want something that will auto-switch the serial port to 2400
baud,
dump the file to the printer, then to reset the port to 19200 baud.

And before anyone ask's it's set to 19200 baud as I can not get the
SupraFAX
modem to work at a higher baud rate with the Falcon and HSMODA06.

BTW, what is the best way to set Thing to use a default text editor for
viewing files? Setting application to view *.* seems to fail?

KW> I try to run the program and it gives me an error message in German.
KW> Has anyone successfully configured this program, and if so... HOW !?!?

Junior Office (current version is 3.04) is preinstalled for Drive C: When you want to change your path then rename the file "FAXDRV.MTX" from folder "OFFICE\MTX" to FAXDRV.PRG , start it with CONTROL-key pressed and change your path to the folder where you can see "SYSTEM", "FAXE.IN", "FAXE.OUT" and "MTX". click OK. Then choose FAXDRV.PRG and click OK again. Then change FAXDRV.PRG back to FAXDRV.MTX
Then do the same prcedure with J_OFFICE.PRG.

Tschuess Frank

PS.: You must have a GDOS installed (e.g. AMCGDOS, NVDI, SPEEDO)

: in getting either 8+8 or 4 ST and 16 TT ram. Are there any
: boards that enables one to use 30 or 72 pinn SIMM modules?

You can buy an original Atari TT RAM board (without any RAM) from Best Electronics in San Jose, California (phone # 408-243-6950). The board takes either 4 megs or 16 megs of standard SIMM's and in April, the price was $150.00 U.S.

>What kind of PD/Shareware 3D rendering programs are available for ST's?
(not
>STe/TT/Falcon) Gourad shading would suffice, raytrace would take ages...

The best (copywrited freeware) 3D rendering program (personal opinion) is
POV-Ray. I don't know of a program that uses Gourad shading, but you
can use the 'Quality' option in POV to reduce the number of colours in
the 'trace and hence reduce the render times. Use +q1 to 9 where 1 is crap
quality, and 9 is best.

I think Douglas Little (Apex Media/BSS fame) put the files together, but the
compile was from France - there doesn't seem to be an EMail address where
to contact the people who did the compilation on the program (c) message.

This copy of POV was on ST Format's coverdisk issue 49, which was version
1.0 converted to the ST as version 1.18 (an unofficial compile I think). The
program name was POV68000.TTP, complete with all the support files.
Oh, and you'll need a CLI too, theres one on the coverdisk if you can get
it,
and a minimum of 1Mb RAM and it runs perfectly on STFM's too. The files were
put into two self-extractling archives called POV_1.TOS and POV_2.TOS.

Sorry, I don't know where you can still get a copy of this (FTP etc.) - it's
not on the official POV-Ray ftp site (ftp.povray.org) and the latest
versions
of POV (2.2) seem to only run on '030 based machines (Falcon, TT, PAK 68/3),
as seen on the Atari section of Raytech BBS (+44 01862 832020 8,N,1 ANSI).

There is also QRT 1.5 (another ST Format coverdisk jobbie) - issue 33. Not
as
fully-featured as POV, but worth a look. Try the FTP Atari site at imperial
college for this one. I used QRT to get into Raytracing two years ago,
before
moving over to POV - with publication of my 'Blobbysnake' picture in STF 52
that took 15 hours to render and the F@~*&%G head detail was still wrong! -
I still sent it off to STF anyway... :#)

All de best

Hi graphics orientated type dude(tte)s!

Anyone know of a FTP/URL sites where I can get loads of Cyber Studio stuff? Mainly .3d2 files for CyberSculpt, but Cyber animations/information /tips etc would also be useful.

I've already got the official POV-Ray CD-ROM with some .3D2 files, but I'm looking for more .3d2 files for conversion to POV-Ray.

Many thanks in advance!

>can restore the boot sector or write a new one without formatting the
>entire partition?

Normally in DOS, you would do the following;

Boot from your system disk on the floppy drive, and type from the DOS
prompt;

SYS C: <assuming that drive C: is the DOS drive>

This puts the hidden DOS system files MSDOS.SYS and IO.SYS, along
with COMMAND.COM back onto your hard drive. Your HDD should then
boot (don't forget to make a backup before trying this out! :#))

Don't know if having partitions from a different OS (ie. GEM) will make
any difference due to location of bootsector, etc.

Best of luck anyway!

: The reason I want this is that some home grown software I have
: requires a lot of floating point work, and it would be nice to use
: my STE as a stop gap whilst I save for a PC.
: (Or get my super computer fixed.)

the Mega STE has a chip slot ready and reserved for a 68881-16
Coprocessor (I am no hardware expert, but you need the one in the sqaue
casing). You just have to olug it in.
You also need a GAL to plug in.
I got both of this at the ProTOS fair last year for around DM 30.
This setup is compatible to the SFP 004 Coprocessor card Atari releeased
for the Mega ST.
IMO all serious development systems support the copro. The one where I am
certain about it is Pure C, Pure Pascal and I asumme also Lattice C. As
fo r the PD compilers, I don't know abot the PD stuf (namely Sozobon C
and GNUC/C++).

Hi,

I'm looking for the games Space Quest 2 and 4, for my Mega ST2.
Is there anybody willing to supply them to me? I would prefere a legal
version of the game. But it does not to seem be available anymore (just
as any other atari game) in shops. All info will be appreciated...

Gerco.

I'm pretty sure that a few Transputers were sold! And I am sitting
here looking at my Atari CDAR504, so it hit the market a little late!
Still works great! don't have to use the computer to control it when
playing music CD's, came with it's own remote, single speed of course.

I've heard of MintNet, but never used it. Does it still allow use
of the desktop and how much RAM and hard disk space are required to run it?

Atari licensed Jaguar technology to Sigma Designs for use in their "Reel Magic" multimedia card for PC's.

(This was from a press release printed in Current Notes magazine about a year or so ago. I no longer have the issue, so I can't be more specific).

1851. MiNT memory problems.

Newsgroup: comp.sys.atari.st
Date: 1995-08-06 00:00:00 UTC
From: smoore@chowgar.demon.co.uk
Message-ID: <807728372_OASIS_@chowgar.demon.co.uk>
Source record: 161191

Hello there

When I'm running MiNT 1.12, tcsh, and lynx along with Blowup and NVDI which I find neccessary on my 4 meg Falcon, as you can imagine the amount of free memory for me to use drops drastically to about 1 meg.

After I've done anything, such as look at a large text file in Everest, I find that when I've exited Everest I don't have as much memory available as I dod have beforehand. Is there a program that will allow me to recover the memory that has been taken? I don't see why this happens, is it something to do with the memory becoming fragmented or something ?

Cheers.

1852. Invision Elite

Newsgroup: comp.sys.atari.st
Date: 1995-08-06 00:00:00 UTC
From: cgood@cix.compulink.co.uk
Message-ID: <DCwHDq.6rx@cix.compulink.co.uk>
Source record: 161192

I've got a demo of an old graphics program called Invision Elite. I've found that it works on my Falcon. It's from Canada by a company called Power Thought Software. These are the details I have on it.

Version v1.12 July '92
Design/Programming by Harlan M. Hugh
Power Thought Software
Box No. 48
275 King St. East
Toronto
Ontario
Canada
M5A 1K2
Phone (416) 594 9355

Does anyone know if a proper version ever saw the light of day? Does the company still exsist? Does anyone know the programmer? I wouldn't mind a copy if anyone's got one.

Email with details if you know anything about this program.
